INDUSTRY DIVISION

Owen C. Gretton, Chief

Acknowledgments

The 1967 Census of Manufactures was conducted under the direction of **Owen C. Gretton**, Chief, and **Milton Eisen**, Assistant Chief. **Elmer S. Biles**, assisted by **John S. Berube, Clifford Bennett**, and **Kenneth I. Hansen**, was responsible for the overall management of the census and was the Industry Division's liaison officer with other Divisions.

Program responsibility along industry lines was shared by the following individuals who participated importantly in the entire census program: **Robert J. Nealon**, Foods, Textiles, and Apparel; **Cyril M. Wildes**, Chemicals and Wood Products; and **Paul F. Berard**, Metals and Metal Products. **Willis K. Jordon** was responsible for preparation of the introductory text and appendix materials. **Edward A. Robinson** made significant contributions to the basic concepts and content of the census. **Donald F. Clark** and **Carl J. Bostrom**, under the direction of **Jack L. Ogus**, developed the mathematical techniques utilized in editing the data and in sampling the respondents. **Louis J. Owen**, assisted by **William R. Gray** was responsible for the inquiries relating to fuel, electric energy, and water data. **William Cooper** had staff responsibility for industry classification and the system of classifying products and materials. **Wayne M. McCaughey** and **Angela R. Daly** also participated importantly in various phases of the project.

Professional personnel in the commodity areas of the Industry Division developed the report forms for the various industries, reviewed the tabulations, and prepared the industry texts that accompanied the data. The respective areas and the individuals in charge during the census were as follows: Foods, **Charles H. W. Sedgewick** and **Carole A. Klein**; Textiles, **Evelyn O. Denny**; Apparel, **Bennie A. Daniels**; Wood Products, **Kenneth E. McBeth**; Pulp and Paper, **Lonnie M. Conner**; Chemicals, **Reese R. Morgan**; Metals, **Malcolm E. Bernhardt**; Machinery, **John P. McNamee**; and Electrical Machinery and Transportation, **Dale W. Gordon**. The names of the supporting statisticians in the commodity areas who made significant contributions are shown in the acknowledgment statements appearing in the 80 industry reports published separately prior to their assembly into the Industry Volume.

Systems and procedures were developed in the Systems Division, **Sol Dolleck**, Chief, by **Eugene Wendt** assisted by **Samuel Schweid**. Clerical procedures were developed by **Alvin Barten, Evelyn V. Williams, Carmen Taylor, Geraldine Manuel, Carl Mueller, Thomas Lowenstein**, and **Jack Margolis**. Electronic computer programs for check-in, geographic coding, and administrative records were developed and supervised by **Charles Venters** and **Terence McDowell** under the direction of **Zigmund Decker** and **Andrew Grieco**. **James Moyers, Gene Haggy, Paul Poissant**, and **Stephan Potemkin** developed and supervised the electronic computer editing and tabulation programs under the direction of **Mary H. Johnson**. Quality control plans and procedures were developed and supervised by **Maxwell D. Jeane**, assisted by **John Powell** and **Carl Jablin**. Data input procedures were developed and supervised by **Leonard Tauber** assisted by **Paul Blackmer**. Production controls were established under the supervision of **Francis Boucher** and **James R. Pepal**.

Processing of reports was performed in the Jeffersonville Census Operations Division, **Joseph F. Arbena**, Chief, by **James S. Werking** assisted by **Margaret Rommel** and **Jordan Horne**. Clerical processing was supervised by **Charles Adams** and quality control plans and procedures were implemented and monitored under the direction of **Kathern Clay**.

Data processing and related operations were performed by the Processing Division, **M. Douglas Fahey**, Chief, assisted by **R. M. Micoly, James Shores**, and **E. R. Bourdon**.

Report planning and editorial review were provided by **Geraldine Censky** and **Frances Bresnahan** of the Administrative and Publications Services Division.

Arthur Horowitz, in his capacity as the coordinator of the economic censuses, made important contributions to the planning and operational phases of the work. **Robert Parker** contributed in the analysis of reports for the large and complex corporate organizations. **James Corbett** developed the computer systems for disclosure analysis, assisted by **Robert Reynolds**.

Special acknowledgment is due to the many businesses whose cooperation has contributed to the publication of the data.

Preface

This is one of a series of volumes presenting the final results of the 1967 Census of Manufactures, which was part of the economic censuses covering that year. In addition to the manufacturing sector, the 1967 economic censuses included wholesale and retail trade, certain services, transportation, construction, commercial fishing, and mining. The censuses measured the activities of nearly 4,000,000 business establishments, including 300,000 engaged in manufacturing.

As in previous census years, the advice and counsel of trade and professional associations, individual companies, Federal and State agencies, labor unions, and research and educational organizations were most valuable in planning the content of the census reports. The Advisory Council on Federal Reports, comprised of representative businessmen, provided special assistance in determining the feasibility of collecting the various types of data. Other advisory committees which counsel the Census Bureau regularly contributed significantly in the planning and preparatory stages. Timely publicity was given by chambers of commerce, newspapers, trade periodicals, and television and radio stations.

As essential element in the Census of Manufactures was the excellent cooperation of the many thousands of manufacturing companies which completed the necessary census questionnaires.

		page
Preface		III
Industry Chapter Descriptions		VII
Introduction		1
Major Groups		
	Fabricated Metal Products	34-1
	Machinery, Except Electrical	35-1
	Electrical Equipment and Supplies	36-1
	Transportation Equipment	37-1
	Instruments and Related Products	38-1
	Miscellaneous Manufacturing Industries	39-1
	Ordnance and Accessories	19-1
Appendixes		
A	Explanation of Terms	A-1
B	Industry Descriptions	B-1
C	Composition of Industries in the 1967 Standard Industrial Classification	C-1
D	Census Report Forms	D-1
E	Authority for Census: Title 13, United States Code	E-1
F	Standard Metropolitan Statistical Areas	F-1
G	Comparability of Product Classes Between the 1967 and 1963 Census of Manufactures	G-1
H	Alphabetic Index of Manufactured Products	H-1

The chapters of this volume were published earlier as separate reports in the 1967 Census of Manufactures series MC67(2).

Data in this volume include all significant corrections uncovered after publication of the separate reports. The 1963 and other historical data include all significant corrections made since the latest publication of these figures.

Industry Chapter Descriptions

Chapters in this volume are coded to industries as classified in the Standard Industrial Classification (SIC) system. Pages are numbered with a chapter identification prefix; for example, the chapter on Weaving Mills in Major Group 22 will begin on page 22A–1. The list below shows the prefix identification for each chapter and the SIC industries included under each title. Chapters for each part of this volume are shown.

PART I

Major Group 20–FOOD AND KINDRED PRODUCTS

20A Meat Products
- 2011 Meat packing plants
- 2013 Sausages and other prepared meats
- 2015 Poultry dressing plants

20B Dairy Products
- 2021 Creamery butter
- 2022 Cheese, natural and processed
- 2023 Condensed and evaporated milk
- 2024 Ice cream and frozen desserts
- 2026 Fluid milk

20C Canned, Cured, and Frozen Foods
- 2031 Canned and curred seafoods
- 2032 Canned specialties
- 2033 Canned fruits and vegetables
- 2034 Dehydrated food products
- 2035 Pickles, sauces, and salad dressings
- 2036 Fresh or frozen packaged fish
- 2037 Frozen fruits and vegetables

20D Grain Mill Products
- 2041 Flour and other grain mill products
- 2042 Prepared feeds for animals and fowls
- 2043 Cereal preparations
- 2044 Rice milling
- 2045 Blended and prepared flour
- 2046 Wet corn milling

20E Bakery Products
- 2051 Bread, cake, and related products
- 2052 Cookies and crackers

20F Sugar and Confectionery Products
- 2061 Raw cane sugar
- 2062 Cane sugar refining
- 2063 Beet sugar
- 2071 Confectionery products
- 2072 Chocolate and cocoa products
- 2073 Chewing gum

20G Beverages
- 2082 Malt liquors
- 2083 Malt
- 2084 Wines, brandy, and brandy spirits
- 2085 Distilled liquor, except brandy
- 2086 Bottled and canned soft drinks
- 2087 Flavoring extracts and sirups, n.e.c.

20H Fats and Oils
- 2091 Cottonseed oil mills
- 2092 Soybean oil mills
- 2093 Vegetable oil mills, n.e.c.
- 2094 Animal and marine fats and oils
- 2096 Shortening and cooking oils

20I Miscellaneous Foods and Kindred Products
- 2095 Roasted Coffee
- 2097 Manufactured ice
- 2098 Macaroni and spaghetti
- 2099 Food preparations, n.e.c.

Major Group 21–TOBACCO MANUFACTURES

21A Tobacco Products
- 2111 Cigarettes
- 2121 Cigars
- 2131 Chewing and smoking tobacco
- 2141 Tobacco stemming and redrying

Major Group 22–TEXTILE MILL PRODUCTS

22A Weaving Mills
- 2211 Weaving mills, cotton
- 2221 Weaving mills, synthetics
- 2231 Weaving and finishing mills, wool
- 2241 Narrow fabric mills

22B Knitting Mills
- 2251 Women's hosiery, except socks
- 2252 Hosiery, n.e.c.
- 2253 Knit outerwear mills
- 2254 Knit underwear mills
- 2256 Knit fabric mills
- 2259 Knitting mills, n.e.c.

22C Dyeing and Finishing Textiles, Except Wool Fabrics and Knit Goods
- 2261 Finishing plants, cotton
- 2262 Finishing plants, synthetics
- 2269 Finishing plants, n.e.c.

22D Floor Covering Mills
- 2271 Woven carpets and rugs
- 2272 Tufted carpets and rugs
- 2279 Carpets and rugs, n.e.c.

22E Yarn and Thread Mills
- 2281 Yarn mills, except wool
- 2282 Throwing and winding mills
- 2283 Wool yarn mills
- 2284 Thread mills

22F Miscellaneous Textile Goods
- 2291 Felt goods, n.e.c.
- 2292 Lace goods
- 2293 Paddings and upholstery filling
- 2294 Processed textile waste
- 2295 Coated fabrics, not rubberized
- 2296 Tire cord and fabric
- 2297 Scouring and combing plants
- 2298 Cordage and twine
- 2299 Textile goods, n.e.c.

Major Group 23–APPAREL AND OTHER TEXTILE PRODUCTS

23A Men's and Boys' Apparel
- 2311 Men's and boys' suits and coats
- 2321 Men's and boys' shirts and nightwear
- 2322 Men's and boys' underwear
- 2323 Men's and boys' neckwear
- 2327 Men's and boys' separate trousers
- 2328 Men's and boys' work clothing
- 2329 Men's and boys' clothing, n.e.c.

23B Women's and Misses' Outerwear
- 2331 Women's and misses' blouses and waists
- 2335 Women's and misses' dresses
- 2337 Women's and misses' suits and coats
- 2339 Women's and misses' outerwear, n.e.c.

23C Women's and Children's Underwear, Headwear, Children's Outerwear
2341 Women's and children's underwear
2342 Corsets and allied garments
2351 Millinery
2352 Hats and caps, except millinery
2361 Children's dresses and blouses
2363 Children's coats and suits
2369 Children's outerwear, n.e.c.

23D Miscellaneous Apparel and Accessories
2371 Fur goods
2381 Fabric dress and work gloves
2384 Robes and dressing gowns
2385 Waterproof outer garments
2386 Leather and sheep-lined clothing
2387 Apparel belts
2389 Apparel and accessories, n.e.c.

23E Miscellaneous Fabricated Textile Products
2391 Curtains and draperies
2392 Housefurnishings, n.e.c.
2393 Textile bags
2394 Canvas products
2395 Pleating and stitching
2396 Automotive and apparel trimmings
2397 Schiffli machine embroideries
2399 Fabricated textile products, n.e.c.

Major G roup 24—LUMBER AND WOOD PRODUCTS

24A Logging Camps, Sawmills, and Planing Mills
2411 Logging camps and logging contractors
2421 Sawmills and planing mills, general
2426 Hardwood dimension and flooring
2429 Special product sawmills, n.e.c.

24C Millwork, Prlywood, and Prefabricated Structural Wood ucts
2431 Millwork
2432 Veneer and plywood
2433 Prefabricated wood structures

24C Wooden Containers and Miscellaneous Wood Products
2441 Nailed wooden boxes and shook
2442 Wirebound boxes and crates
2443 Veneer and plywood containers
2445 Cooperage
2491 Wood preserving
2499 Wood products, n.e.c.

PART II

Major Group 25—FURNITURE AND FIXTURES

25A Household Furniture
2511 Wood household furniture
2512 Upholstered household furniture
2514 Metal household furniture
2515 Mattresses and bedsprings
2519 Household furniture, n.e.c.

25B Office, Public Building, and Miscellaneous Furniture; Office and Store Fixtures
2521 Wood office furniture
2522 Metal office furniture
2531 Public building furniture
2541 Wood partitions and fixtures
2542 Metal partitions and fixtures
2591 Venetian blinds and shades
2599 Furniture and fixtures, n.e.c.

Major Group 26—PAPER AND ALLIED PRODUCTS

26A Pulp, Paper, and Board Mills
2611 Pulpmills
2621 Papermills, except building paper
2631 Paperboard mills
2661 Building paper and board mills

26B Converted Paper and Paperboard Products, Except Containers and Boxes
2641 Paper coating and glazing
2642 Envelopes
2643 Bags, except textile bags
2644 Wallpaper
2645 Die-cut paper and board
2646 Pressed and molded pulp goods
2647 Sanitary paper products
2649 Converted paper products, n.e.c.

26C Paperboard Containers and Boxes
2651 Folding paperboard boxes
2652 Setup paperboard boxes
2653 Corrugated and solid fiber boxes
2654 Sanitary food containers
2655 Fiber cans, drums, and related materials

Major Group 27—PRINTING AND PUBLISHING

27A Newspapers, Periodicals, Books, and Miscellaneous Publishing
2711 Newspapers
2721 Periodicals
2731 Book publishing
2732 Book Printing
2741 Miscellansous publishing

27B Commercial Printing and Manifold Business Forms
2751 Commercial printing, except lithographic
2752 Commercial printing, lithographic
2753 Cengraving and plate printing
2761 Manifold business forms

27C Greeting Cards; Bookbinding; Printing Trade Services
2771 Greeting card publishing
2782 Blankbooks and looseleaf binders
2789 Bookbinding and related work
2891 Typesetting
2793 Photoengraving
2794 Electrotyping and stereotyping

Major Group 28—CHEMICALS AND ALLIED PRODUCTS

28A Industrial Chemicals
2812 Alkalies and chlorine
2813 Industrial gases
2815 Cyclic intermediates and crudes
2816 Inorganic pigments
2818 Industrial organic chemicals, n.e.c.
2819 Industrial inorganic chemicals, n.e.c.

28B Plastics Materials, Synthetic Rubber, and Manmade Fibers
2821 Plastics materials and resins
2822 Synthetic rubber
2823 Cellulosic manmade fibers
2824 Organic fibers, noncellulosic

28C Drugs
2831 Biological products
2833 Medicinals and botanicals
2834 Pharmaceutical preparations

28D Soap, Cleaners, and Toilet Goods
2841 Soap and other detergents
2842 Polishes and sanitation goods
2843 Surface active agents
2844 Toilet preparations

28E Paints and Allied Products; Gum and Wood Chemicals
2851 Paints and allied products
2861 Gum and wood chemicals

28F Agricultural Chemicals
2871 Fertilizers
2872 Fertilizers, mixing only
2879 Agricultural chemicals, n.e.c.

28G Miscellaneous Chemical Products
2891 Adhesives and gelatin
2892 Explosives
2893 Printing ink
2895 Carbon black
2899 Chemical preparations, n.e.c.

Major Group 29—PETROLEUM AND COAL PRODUCTS

29A Petroleum and Coal Products
2911 Petroleum refining
2951 Paving mixtures and blocks
2952 Asphalt felts and coatings
2992 Lubricating oils and greases
2999 Petroleum and coal products, n.e.c.

Major Group 30—RUBBER AND PLASTICS PRODUCTS' N.E.C.

30A Rubber and Miscellaneous Plastics Products
3011 Tires and inner tubes
3021 Rubber footwear
3031 Reclaimed rubber
3069 Fabricated rubber products, n.e.c.
3079 Miscellaneous plastics products

Major Group 31—LEATHER AND LEATHER PRODUCTS

31A Tanning; Industrial Leather Goods; and Shoes
3111 Leather tanning and finishing
3121 Industrial leather belting
3131 Footwear cut stock
3141 Shoes, except rubber
3142 House slippers

31B Leather Gloves; Luggage; and Miscellaneous Leather Goods
3151 Leather gloves and mittens
3161 Luggage
3171 Women's handbags and purses
3172 Personal leather goods
3199 Leather goods, n.e.c.

Major Group 32—STONE, CLAY, AND GLASS PRODUCTS

32A Glass Products
3211 Flat glass
3221 Glass containers
3229 Pressed and blown glass, n.e.c.
3231 Products of purchased glass

32B Cement and Structural Clay Products
3241 Cement, hydraulic
3251 Brick and structural clay tile
3253 Ceramic wall and floor tile
3255 Clay refractories
3259 Structural clay products, n.e.c.

32C Pottery and Related Products
3261 Vitreous plumbing fixtures
3262 Vitreous china food utensils
3263 Fine earthenware food utensils
3264 Porcelain electrical supplies
3269 Pottery products, n.e.c.

32D Concrete, Plaster, and Cut-Stone Products
3271 Concrete block and brick
3272 Concrete products, n.e.c.
3273 Ready-mixed concrete
3274 Lime
3275 Gypsum products
3281 Cut stone and stone products

32E Abrasive, Asbestos, and Miscellaneous Nonmetallic Mineral Products
3291 Abrasive products
3292 Asbestos Products
3293 Gaskets and insulations
3295 Minerals, ground or treated
3296 Mineral wool
3297 Nonclay refractories
3299 Nonmetallic mineral products, n.e.c.

Major Group 33—PRIMARY METAL INDUSTRIES

33A Blast Furnaces, Steel Works, and Rolling and Finishing Mills
3312 Blast furnaces and steel mills
3313 Electrometallurgical products
3315 Steel wire and related products
3316 Cold finishing of steel shapes
3317 Steel pipe and tubes

33B Iron and Steel Foundries
3321 Gray iron foundries
3322 Malleable iron foundries
3323 Steel foundries

33C Smelting and Refining of Nonferrous Metals and Alloys
3331 Primary copper
3332 Primary lead
3333 Primary zinc
3334 Primary aluminum
3339 Primary nonferrous metals, n.e.c.
3341 Secondary nonferrous metals

33D Nonferrous Metal Mill and Foundry Products
3351 Copper rolling and drawing
3352 Aluminum rolling and drawing
3356 Nonferrous rolling and drawing, n.e.c.
3357 Nonferrous wiredrawing and insulating
3361 Aluminum castings
3362 Brass, bronze, and copper castings
3369 Nonferrous castings, n.e.c.

33E Forgings and Miscellaneous Primary Metal Products
3391 Iron and steel forgings
3392 Nonferrous forgings
3399 Primary metal products, n.e.c.

PART III

Major Group 34—FABRICATED METAL PRODUCTS

34A Metal Cans, Cutlery, Handtools, and General Hardware
3411 Metal Cans
3421 Cutlery
3423 Hand and edge tools, n.e.c.
3425 Handsaws and saw blades
3429 Hardware, n.e.c.

34B Heating Apparatus (Except Electric) and Plumbing Fixtures
3431 Metal sanitary ware
3432 Plumbing fittings and brass goods
3433 Heating equipment, except electric

34C Fabricated Structural Metal Products
3441 Fabricated structural steel
3442 Metal doors, sash, and trim
3443 Fabricated platework (boiler shops)
3444 Sheet metalwork
3446 Architectural metalwork
3449 Miscellaneous metalwork

34D Screw Machine Products, Fasteners and Washers; Metal Stampings; and Metal Services
3451 Screw machine products
3452 Bolts, nuts, rivets, and washers
3461 Metal stampings
3471 Plating and polishing
3479 Metal coating and allied services

34E Miscellaneous Metal Products
- 3481 Miscellaneous fabricated wire products
- 3491 Metal barrels, drums, and pails
- 3492 Safes and vaults
- 3493 Steel springs
- 3494 Valves and pipe fittings
- 3496 Collapsible tubes
- 3497 Metal foil and leaf
- 3498 Fabricated pipe and fittings
- 3499 Fabricated metal products, n.e.c.

Major Group 35—MACHINERY, EXCEPT ELECTRICAL

35A Engines and Turbines and Farm Machinery and Equipment
- 3511 Steam engines and turbines
- 3519 Internal combustion engines, n.e.c.
- 3522 Farm machinery

35B Construction, Mining, and Materials Handling Machinery and Equipment
- 3531 Construction machinery
- 3532 Mining machinery
- 3533 Oilfield machinery
- 3534 Elevators and moving stairways
- 3535 Conveyors and conveying equipment
- 3536 Hoists, cranes, and monorails
- 3537 Industrial trucks and tractors

35C Metalworking Machinery and Equipment
- 3541 Machine tools, metal-cutting types
- 3542 Machine tools, metal-forming types
- 3544 Special dies, tools, jigs, and fixtures
- 3545 Machine tool accessories
- 3548 Metalworking machinery, n.e.c.

35D Special Industry Machinery, Except Metalworking Machinery
- 3551 Food products machinery
- 3552 Textile machinery
- 3553 Woodworking machinery
- 3554 Paper industries machinery
- 3555 Printing trades machinery
- 3559 Special industry machinery, n.e.c.

35E General Industrial Machinery and Equipment
- 3561 Pumps and compressors
- 3562 Ball and roller bearings
- 3564 Blowers and fans
- 3565 Industrial patterns
- 3566 Power transmission equipment
- 3567 Industrial furnaces and ovens
- 3569 General industry machinery, n.e.c.

35F Office, Computing, and Accounting Machines
- 3572 Typewriters
- 3573 Electronic computing equipment
- 3574 Calculating and accounting machines
- 3576 Scales and balances
- 3579 Office machines, n.e.c.

35G Service Industry Machines and Machine Shops
- 3581 Automatic merchandising machines
- 3582 Commercial laundry equipment
- 3585 Refrigeration machinery
- 3586 Measuring and dispensing pumps
- 3589 Service industry machines, n.e.c.
- 3599 Miscellaneous machinery, except electrical

Major Group 36—ELECTRICAL EQUIPMENT AND SUPPLIES

36A Electrical Measurement and Distribution Equipment
- 3611 Electric measuring instruments
- 3612 Transformers
- 3613 Switchgear and switchboard apparatus
- 3621 Motors and generators
- 3622 Industrial controls
- 3623 Welding apparatus
- 3624 Carbon and graphite products
- 3629 Electrical industrial apparatus, n.e.c.

36B Household Appliances
- 3631 Household cooking equipment
- 3632 Household refrigerators and freezers
- 3633 Household laundry equipment
- 3634 Electric housewares and fans
- 3635 Household vacuum cleaners
- 3636 Sewing machines
- 3639 Household appliances, n.e.c.

36C Electric Lighting and Wiring Equipment
- 3641 Electric lamps
- 3642 Lighting fixtures
- 3643 Current-carrying wiring devices
- 3644 Noncurrent-carrying wiring devices

36D Communication Equipment, Including Radio and TV, and Electronic Components and Accessories
- 3651 Radio and TV receiving sets
- 3652 Phonograph records
- 3661 Telephone and telegraph apparatus
- 3662 Radio and TV communication equipment
- 3671 Electron tubes, receiving type
- 3672 Cathode ray picture tubes
- 3673 Electron tubes, transmitting
- 3674 Semiconductors
- 3679 Electronic components, n.e.c.

36E Miscellaneous Electrical Equipment and Supplies
- 3691 Storage batteries
- 3692 Primary batteries, dry and wet
- 3693 X-ray apparatus and tubes
- 3694 Engine electrical equipment
- 3699 Electrical equipment, n.e.c.

Major Group 37—TRANSPORTATION EQUIPMENT

37A Motor Vehicles and Equipment
- 3711 Motor vehicles
- 3712 Passenger car bodies
- 3713 Truck and bus bodies
- 3714 Motor vehicle parts and accessories
- 3715 Truck trailers

37B Aircraft and Parts
- 3721 Aircraft
- 3722 Aircrafr engines and engine parts
- 3723 Aircraft propellers and parts
- 3729 Aircraft equipment, n.e.c.

37C Ship and Boat Building, Railroad and Miscellaneous Transportation Equipment
- 3731 Ship building and repairing
- 3732 Boat building and repairing
- 3741 Locomotives and parts
- 3742 Railroad and street cars
- 3751 Motorcycles, bicycles, and parts
- 3791 Trailer coaches
- 3799 Transportation equipment, n.e.c.

Major Group 38—INSTRUMENTS AND RELATED PRODUCTS

38A Instruments; Surgical, Dental, and Ophthalmic Equipment and supplies
- 3811 Engineering and scientific instruments
- 3821 Mechanical measuring devices
- 3822 Automatic temperature controls
- 3831 Optical instruments and lenses
- 3841 Surgical and medical instruments
- 3842 Surgical appliances and supplies
- 3843 Dental equipment and supplies
- 3851 Ophthalmic goods

38B Photographic Equipment; Clocks, Watches, and Watchcases
- 3861 Photographic equipment and supplies
- 3871 Watches and clocks
- 3872 Watchcases

Major Group 39—MISCELLANEOUS MANUFACTURING INDUSTRIES

39A Jewelry, Silverware, and Plated Ware
- 3911 Jewelry, precious metal
- 3912 Jewelers' findings and materials
- 3913 Lapidary work
- 3914 Silverware and plated ware

39B Musical Instruments and Parts; Toys and Sporting Goods
- 3931 Musical instruments and parts
- 3941 Games and toys
- 3942 Dolls
- 3943 Children's vehicles, except bicycles
- 3949 Sporting and athletic goods, n.e.c.

39C Office Supplies, Costume Jewelry, and Notions
- 3951 Pens and mechanical pencils
- 3952 Lead pencils and art goods
- 3953 Marking devices
- 3955 Carbon paper and inked ribbons
- 3961 Costume jewelry
- 3962 Artificial flowers
- 3963 Buttons
- 3964 Needles, pins, and fasteners

39D Miscellaneous Manufactures
- 3991 Brooms and brushes
- 3993 Signs and advertising displays
- 3994 Morticians' goods
- 3996 Hard-surface floor coverings
- 3999 Manufactures, n.e.c.

Major Group 19—ORDNANCE AND ACCESSORIES

19A Ordnance and Accessories
- 1911 Guns, howitzers, and mortars
- 1925 Complete guided missiles
- 1929 Ammunition, except for small arms, n.e.c.
- 1931 Tanks and tank components
- 1941 Sighting and fire control equipment
- 1951 Small arms
- 1961 Small arms ammunition
- 1999 Ordnance and accessories, n.e.c.

I. GENERAL BACKGROUND

1. THE ECONOMIC CENSUSES

General.—The economic censuses provide a comprehensive statistical profile of a large segment of the national economy. In 1967, these censuses accounted for nearly 70 percent of the $555 billion of national income originating in the private sector. The principal industry groups not covered were finance, insurance, and real estate; agriculture and forestry; communications; and electric, gas, and sanitary services.

Uses and Users of Census Data.—The economic censuses are the primary source of facts about the structure and functioning of the economy and therefore provide information essential both for government and business. They furnish an important part of the framework for such composite measures as the national accounts. The census measures also provide weights and serve as benchmarks for current surveys of industrial activity and for indexes of industrial production, productivity, and price, all of which are essential in developing the general background for understanding particular economic situations.

There is widespread use of the economic censuses by manufacturers and distributors who need to establish measures of their potential markets in terms of areas, kinds of business, and kinds of products; and by management in various industries and trades which need facts for purposes of economic or sales forecasting, for analysis of sales performance, for the layout of sales territories, for the allocation of advertising budgets, and for the location of plants, warehouses, and stores. For these business purposes, census facts are invaluable. Likewise, trade and professional associations need census information to learn how their industry is changing; chambers of commerce need to know how their community is changing. State and local governments need to understand the business structure and changes occurring in their areas. Business magazines rely on census facts as background for many of their articles.

Following every census, reports are purchased by thousands of business and other users; likewise, census facts are widely disseminated by trade associations, business journals, and the daily press; census volumes are available in all the major public and college libraries.

History.—The first statistical survey which can be called an economic census covered the year 1809, when inquiries on manufacturing were included with the 1810 census of population. Although the results of this pioneer effort were unsatisfactory by modern standards,[1] continued interest in measurement of the Nation's economic progress led to successive improvements during the 19th century. By 1890, the statistical standards and procedures followed in conducting the censuses were of a fully professional quality.

All of the decennial censuses from 1810 through 1940, with the exception of 1830, included questions on manufacturing. Inquiries on mining first appeared in 1840, and censuses of mineral industries were conducted decennially through 1940. Although some business-related data were collected in 1840, the first census of business was taken for the year 1929. This included retail trade, wholesale trade, and construction: selected service trades were covered beginning with 1933. Dates of these and other economic censuses from 1809 are shown in table A.

Enterprise Statistics.—The coordinated collection and tabulation of comparable data for several sectors beginning with 1954 has permitted the Census Bureau to develop its enterprise statistics program, which relates census company-level data to the establishment data. Thus, a measurement of the integration and diversification of the American enterprise system becomes available. Also, through the enterprise statistics program, it has become possible to link census establishment-based data on a modified basis to other statistical systems such as the Internal Revenue Service's "Statistics of Income" for corporations.

Legal Provisions.—Title 13 of the United States Code specifies the frequency of the censuses, the kinds of activities to be covered, the obligation to report, the penalties for failure to report, and the confidentiality of returns. It also authorizes the use of sampling techniques in conducting censuses. As amended

[1] For an appraisal of early censuses of manufacturing, see Meyer H. Fishbein, *The Censuses of Manufactures 1810-1890.* National Archives Publication No. 63-22, June 1963. Government Printing Office.

in 1964, Title 13 requires the economic censuses to be taken at 5-year intervals, covering the years ending in "2" and "7." The next censuses will cover the year 1972. The pertinent portions of Title 13 are quoted in appendix E.

2. CHARACTERISTICS OF THE INDUSTRIAL SECTOR

General.—In terms of the major industry divisions established in the national accounts, manufacturing is the largest sector of the economy. In 1967, manufacturing plants employed 19 million persons, 26 percent of the civilian labor force of 74 million. Over the past 20 years, as shown in table B, national income originating in manufacturing has averaged 30 percent of the total. The next largest sector, wholesale and retail trade, declined from 19 percent in 1947 to 15 percent in 1967.

Cyclical Changes.—The need for frequent and comprehensive statistics on manufacturing derives as much from its sensitivity to cyclical influences as from its relative size. Cyclical changes in income originating in manufacturing tend to be relatively larger than in the economy as a whole.

Within manufacturing, durable goods industries accounted for about 58 percent of all manufactures during recent periods. This category tends to be more volatile than nondurable goods, generally accounting for a smaller percentage of all manufactures during periods of contraction and a larger percentage during periods of expansion. In the early thirties, for example, as shown in table C, durable goods manufacturing amounted to only about one-third of the total.

Geographic Distribution.—In the 19th century, manufacturing activity was concentrated in the Northeast. Over the past hundred and twenty years, as shown in table D, there has been a steady decline in the proportion accounted for by the Northeastern States, and a marked growth in the South and West.

TABLE B. National Income by Industry Division for Selected Years

Industry	1929	1939	1947	1954	1958	1963	1967
	Billions of dollars						
All industry divisions, total	86.8	72.6	199.0	303.1	367.8	481.9	653.3
Manufacturing	21.9	18.1	59.5	94.6	107.8	143.8	195.2

Size Distribution.—While there are many small manufacturing plants, they account for a relatively small part of the total output of goods. As shown in table E, over half of the plants covered in the 1967 census had less than 10 employess but they accounted for less than 3 percent of the total value added by manufacture.

3. ROLE OF THE CENSUS OF MANUFACTURES

In the farm-oriented economy of the 19th century, industrial statistics played a relatively small role in government policy formation. A few series on physical output of commodities originated either from private sources (flour, iron, and steel, etc.) or as a byproduct of tax collection or other government functions (liquors, beer, tobacco products, etc.). Other than these, the only sources of information on the manufacturing sector were the censuses of manufactures, then taken at 10-year intervals. Today, the need for industrial statistics has greatly increased, and the user finds a vast array of detailed information covering virtually every measurable aspect of industrial activity including employment, payrolls, hours worked, production, prices, inventories, orders, investment in structures, machinery, and equipment, and consumption of raw materials, fuels, and water. Many of these statistics are available at frequent intervals and on a timely basis. Sophisticated indicators of economic progress have also been developed such as price and production indexes, gross national product, and national income, published at monthly or quarterly intervals.

In this setting, the census of manufactures still plays an essential role since no other source provides such comprehensive and detailed information on the structure of the industrial sector. In effect, the census obtains, for every manufacturing plant with one employee or more, data on its input of labor, materials, and capital, its output of products and services, its location, and the legal form of organization of the owning firm.[2] These facts are obtained in sufficient detail to permit classification by industry, by size of plant, by homogeneity of output and, where desirable, by type of operation, extent of vertical integration, kind of equipment, relationship to other plants of the same firm, and other characteristics.

[2] For 1967, some of this information for 120,000 small companies was not obtained directly but estimated from administrative records. See the discussion of coverage of establishments in sections 4 and 6 below.

TABLE C. Total National Income and Amounts Originating in Durable and Nondurable Manufactures for Selected Years

(Dollar values in billions)

Year	National income	National income originating in manufacturing			Manufacturing as a percent of national income	Durable goods industries as a percent of total manufacturing
		Total	Nondurable goods industries	Durable goods industries		
1967	653.6	195.2	75.5	119.7	30	61
1966	620.6	191.5	72.9	118.5	31	62
1965	564.3	172.6	66.5	106.1	31	61
1964	518.1	155.6	61.9	93.6	30	60
1963	481.9	143.8	57.5	86.3	30	60
1962	457.7	137.0	55.6	81.4	30	59
1961	427.3	125.1	52.8	72.3	29	58
1960	414.5	125.8	52.2	73.6	30	59
1959	400.0	124.0	51.1	72.9	31	59
1958	367.8	107.7	45.7	62.0	29	58

General statistics (that is, total employment, payroll, production-worker employment, man-hours, wages, cost of materials, value of shipments, inventories, capital expenditures, and value added by manufacture) from the census of manufactures are published by industry, by area, by employment size of establishment, by degree of product specialization within plant, and by type of ownership. Information is supplied on the detailed industrial characteristics of each State and large standard metropolitan statistical area (SMSA); and overall measures of manufacturing activity are shown at the county and individual city level down to cities of 10,000 or more population. The compilation entitled "Location of Manufacturing Plants" shows, for each of the 3,100 counties in the United States, the number of manufacturing plants, by size, for each of 420 industries. Information such as this constitutes a periodic inventory of the Nation's manufacturing economy that provides a benchmark for measuring the changes in its structure.

The census of manufactures also provides benchmarks from which more frequent surveys can be developed on a sample basis. In fact, the present legislation specifying that censuses be conducted every 5 years authorizes an Annual Survey of Manufactures (ASM) on a sample basis during the intervening years. After each 5-year census, a new sample is drawn utilizing the characteristics recorded for each company in the census. The sample, constituting about one-fifth of the establishments but with complete coverage of all large ones, provides an annual updating of the census of manufactures in terms of broad measures of economic activity. It provides the same basic measures of economic activity of the plant such as employment, payrolls, value of shipments, value added by manufacture, as does the census of manufactures, but contains less detailed information on products, materials consumption, and equipment.[3]

The census of manufactures not only is a benchmark for many of the surveys conducted by the Census Bureau itself on a more frequent basis but also is the means of updating other indicators of economic activity. It provides very important information on the manufacturing segment used in the national income accounts. Census data on materials consumed and product output are basic to the manufactures sector of the input-output studies of the Office of Business Economics. The information derived from the census of manufactures is also used to develop indexes of industrial production for census years. These indexes are used as benchmarks for the monthly Federal Reserve Board Index of Industrial Production—a key indicator of

[3]Since the ASM is based on a sample, the cross-classifications by industry and by area are fewer than in the census of manufactures. At the U.S. level, statistics are published in the annual survey for practically all of the 420 industries. However, at the State and SMSA levels, statistics are published only for 3-digit and 2-digit industry groupings, respectively. At the county level, information is published for about 10 percent of the 3,100 counties. These 300-odd counties are the larger ones in terms of manufacturing activity and account for about 80 percent of total manufacturing employment. No information is published at the city level.

TABLE D. Employment in Manufacturing Establishments, by Region: 1849 to 1967

Year	United States	Northeast	North Central	South	West
	Number of employees (thousands)				
1967.....	18,492	5,573	6,059	4,553	2,305
1963.....	16,235	5,190	5,239	3,780	2,025
1958.....	15,423	5,242	5,017	3,382	1,779
1947.....	14,294	5,429	5,109	2,710	1,054
1939.....	9,527	3,879	3,184	1,852	612
1929.....	10,198	4,246	3,516	1,758	675
1899.....	5,077	2,629	1,474	793	181
1849.....	957	696	110	146	4
	Percent of U.S. total				
1967.....	100	30	33	25	12
1963.....	100	32	32	23	13
1958.....	100	34	33	22	12
1947.....	100	38	36	19	7
1939.....	100	41	34	20	6
1929.....	100	42	35	17	7
1899.....	100	52	29	16	4
1849.....	100	73	12	15	-

Source: Census of Manufactures.

Note: Detail may not add to totals because of independent rounding. 1849 data include hand and neighborhood industries, which were excluded from the censuses of manufactures beginning with 1899.

TABLE E. Cumulative Percentage of Number of Manufacturing Establishments and Value Added by Manufacture, by Size Class of Establishment: 1967

Size class	Number of establishments	Value added by manufacture
1 to 4 employees.....	38.4	1.1
1 to 9 employees.....	51.3	2.3
1 to 19 employees.....	64.9	5.1
1 to 49 employees.....	80.9	12.1
1 to 99 employees.....	89.0	20.0
1 to 249 employees.....	95.5	34.9
1 to 499 employees.....	98.0	48.7
1 to 999 employees.....	99.2	62.0
1 to 2,499 employees.....	99.7	77.0
All establishments, total...	100.0	100.0

current economic activity. The census and ASM also provide benchmarks for hundreds of monthly and quarterly surveys of commodity output conducted by the Census Bureau, other government agencies, and by manufacturers' associations.

4. INDUSTRY AND PRODUCT CLASSIFICATION

Structure of the Standard Industrial Classification.—The basic classification system employed in the economic censuses is the Standard Industrial Classification (SIC). The SIC was developed for use in the classification of establishments by type of activity in which engaged. It covers the entire field of economic activities, subdivided as follows:

Industrial division	Title	Major groups
A	Agriculture, forestry, and fisheries	01-09
B	Mining	10-14
C	Contract construction	15-17
D	Manufacturing	19-39
E	Transportation, communication, electric, gas, and sanitary services	40-49
F	Wholesale and retail trade	50-59
G	Finance, insurance, and real estate	60-67
H	Services	70-89
I	Government	91-94
J	Nonclassifiable establishments	99

Below the major group level, the SIC provides for 3-digit groups and finally for 4-digit industries. To illustrate—

Division D.—Manufacturing

Major Group 20 ..... Food and kindred products
Industry group 202 ..... Dairy products
Industry 2023 ..... Condensed and evaporated milk

The SIC is the responsibility of an intragovernmental technical committee headed by the Office of Management and Budget (formerly Bureau of the Budget). The system is used by all Federal Government agencies engaged in the classification of establishments. To facilitate comparison with Federal statistics and the filing of reports, many state and local governments and business concerns organize their own records along SIC lines.

The first SIC manual was issued in 1939. For the manufacturing sector, the nucleus of the manual was the census of manufactures industry classifications developed over a period of many years.[4]

Structure of the SIC Manufacturing Division.—For the manufacturing division, the 21 2-digit SIC Major Groups (19 to 39) are subdivided into 149 3-digit SIC Groups (191 to 399) and into 422 4-digit industries (1911 to 3999). While the SIC contains 422 industries, the Bureau of the Census has combined two small industries with others for a total of 420 industries.

Most of the 422 manufacturing industries are defined in terms of a specific group of related products. Usually, the products are made of similar materials and by similar processes, and are competitive. In determining the boundaries of product-

[4] For the manufacturing industries, a revised manual was issued in 1945 which, with minor modifications, was used in the 1947 census of manufactures. For the 1954 census, the classification structure used in 1947 was again employed, again with minor modifications. In 1957, the SIC system was extensively revised for manufacturing industries and historical comparability of some data was seriously affected. This revision and its effects on census series are described in the introduction and appendixes to the 1958 census volumes. Minor revisions of the SIC between 1958 and 1967 introduced some 4-digit industry changes but none of them crossed 3-digit group lines. Another extensive revision of the SIC, now under way, is scheduled to be effective with 1972.

defined industries,[5] it is essential that each industry comprise a group of establishments whose output of products defining the industry (primary products) accounts for a relatively high proportion of the total shipments of the industry as well as of the total shipments of these primary products by establishments in all manufacturing industries. Some industries are defined in terms of the processes or equipment used regardless of the final product of the establishment. A small number of industries are basically defined by material used as well as final product of the plant.

There are wide differences among industries in the extent to which the establishments classified in the industry (a) account for the total production of commodities "primary" to the industry, (b) produce products or services "belonging" to other industries (that is, secondary products), and (c) use similar materials or processes. While these variations are frequently construed to be shortcomings, the fact is that the limitations observed in the classification structure arise from the inherent complexity of our economic system and from the disparity in the methods of production among the individual producing units of which it is comprised. The data collected in the census of manufactures provide a statistical basis for a critical evaluation of the classification system; that is, for assessing the boundaries between industries, the growth and decline of industries, and the impact of technological change on the classification of industries.[6]

No general-purpose system of industrial classification can hope to satisfy all users of census data. Some business users will be interested primarily in data relating only to themselves and to their competitors in the production of a narrow range of products; others will wish data relating to all products, including complementary and substitutable products, competing in a particular market; others may wish data relating to the consumers of one or more types of materials. Some may be interested only in the data for plants producing a specific product; others only for those plants producing a "full line" of products. The large number of SIC industries provides the analyst with the "building blocks" for obtaining useful approximations, if not "clean" data, relevant to many of these problems. But, at best, a single general-purpose system of classification can only partially satisfy these diverse needs; a point is soon reached beyond which the adaptation of a system to serve one use somewhat better will reduce its ability, often disproportionately, to serve an alternative use.

Accordingly, users of data frequently regroup detailed SIC industries into broad groupings along lines different from those in the SIC 2- and 3-digit categories. The Federal Reserve Board for many years has made combinations to stress such criteria as durable, nondurable, consumers, producers, finished, intermediate goods, etc. Other public and private agencies also recombine the detailed classes. By and large, the 4-digit industries are susceptible to allocation to such categories, while the 2-digit SIC groups are not.

Subindustries.—To increase the usefulness or improve the editing of the data, the Census Bureau frequently has further classified the basic 4-digit SIC industries into "subindustries." This device is employed where there are wide disparities in the operating ratios of the plants in the industry because of differences among plants in the degree of vertical integration, technology, methods of distribution, geographic location, types of materials used, etc. This technique was used for about 65 manufacturing industries for editing purposes and many were regarded as significant enough to be used for publication: For example, the bakery industry (SIC 2051) is subdivided into wholesale bakeries, chain-store bakeries, home-service bakeries, and retail multi-outlet bakeries and many apparel industries (Group 23) are subclassified into manufacturers, contractors, and jobbers.

To provide a further measurement of variations within 4-digit industries, the Bureau also subclassifies establishments by the degree to which they produce the primary products or specific classes of primary products of the 4-digit industry. This is in effect a subindustry classification based on degree of product specialization which is published in table 8 of the industry chapters.

Definition of Manufacturing.—As defined in the SIC, manufacturing is the mechanical or chemical transformation of inorganic or organic substances into new products. The assembly of component parts of products is also considered to be manufacturing if the resulting product is neither a structure nor other fixed improvement. These activities are usually carried on in plants, factories, or mills, which characteristically use power-driven machines and materials-handling equipment.

Manufacturing production is usually carried on for the wholesale market, for transfer to other plants of the same company, or to the order of industrial users rather than for direct sale to the household consumer. However, some manufacturers (for example, baking, milk bottling, etc.) sell chiefly at retail to household consumers through the mail, through house-to-house routes, or through salesmen. Some activities of a service nature (enameling, binding, platemaking, etc.) are included in manufacturing when they are performed primarily for trade; but they are considered nonmanufacturing when they are performed primarily to the order of the household consumer. On the other hand, some manufacturing industries include business firms which perform only the entrepreneurial functions of buying the materials and designing and marketing the product, but have the actual production done on contract (for example, apparel jobbers).

Auxiliary Units.—In addition to the production of goods and manufacturing services, manufacturing plants engage in related and diverse supporting activities. These activities encompass the acquisition of materials to be processed, their movement into the manufacturing facility, their storage at the manufacturing site, the operation and maintenance of plant and equipment, the design of flow of work through the production process, and necessary arrangements for shipment of output to customers. Also included are a host of subsidiary activities associated with the operation of the establishment as a manufacturing entity (for example, management and policy formation, product and market orientation, engineering and quality control, recordkeeping and accounting, physical security of plant and equipment, and the like). Such subsidiary activities may be performed by personnel located at the manufacturing facility or at an auxiliary unit serving one or more manufacturing locations of the same company. Where these activities are carried on at a different physical location or are performed for more than one plant, they are excluded from the figures for operating manufacturing establishments and are included in the data shown for central administrative offices and auxiliaries. (See the description of the questionnaire used for these establishments, Form NC-X6, in section 7, below.)

---

[5] Frequently, business analysts and other data users look at a group of products from more than one point of view. For example, modern high-speed computers are classified as office machines. This describes the purpose of the product. In a physical sense, however, such computers would be described as electronic devices. Similarly, paper bags, wooden boxes, glass bottles, tin cans, and steel barrels may all be classified as containers or they may be individually grouped with other products of similar materials such as converted paper products, wood products, glass products, etc.

[6] See *Industry Classification and Sector Measures of Industrial Production* by James W. McKie, Bureau of the Census Working Paper No. 20, 1965, and *Historical Comparability of Census of Manufactures Industries, 1929-1958* by Harold T. Goldstein, Bureau of the Census Working Paper No. 9, 1959.

Marginal Activities.—The following types of activities, while having some of the characteristics usually found in manufacturing, are considered as nonmanufacturing and, therefore, are excluded from the census:

(a) Processing on farms when the raw materials are grown on the farm and the manufacturing activities (poultry dressing, milk and butter production, logging) are on a small scale without extensive use of paid labor. Also custom milling, cotton ginning, egg hatching, and similar activities closely associated with agriculture are excluded.

(b) Mineral preparation such as the crushing, screening, and concentrating of ores. However, mining performed as a secondary activity in conjunction with manufacturing is included in the census unless a separate report for the mining activity was filed; for example, stone and clay mining at cement, lime, and clay products plants.

(c) Custom work to the individual order of household consumers. Examples are custom tailoring, woodworking, lettering on monuments, setting of diamonds, and the making of orthopedic appliances.

(d) Repair and other service activities, except specified services performed "for the trade." Repair shops of railroads are also excluded.

(e) Production of coke for own use by establishments owned by public utility companies.

In the 1967 census, no attempt was made to measure the extent of manufacturing at locations which are not primarily manufacturing plants, such as retail establishments which sell most of their products on the premises directly to household consumers (retail bakeries,[7] ice cream stores, etc.), or manufacturing by construction contractors at the site (for example, production of paving mixtures).

Conversely, it is not unusual for manufacturing establishments to engage also in nonmanufacturing activities such as repair work, merchandising of products without further processing, and installation work. Ordinarily, these nonmanufacturing receipts are small in relation to the manufacturing activities and, therefore, it is not difficult to determine that the establishments should be included in the manufactures area. However, if the nonmanufacturing activities account for a significant proportion of total receipts of an establishment, the classification of that establishment into the appropriate major economic sector is more difficult.

In the 1967 economic censuses, an establishment engaged in a combination of manufacturing and merchandising was assigned either to the manufacturing or the trade industries depending on which of these activities was estimated to account for the larger share of its "value added" or "income produced." This criterion, even though based on approximation, was considered preferable to reported dollar volume of receipts from each type of activity in determining the primary industry, since manufacturing requires considerably more man-hours, salaries and wages, and capital inputs per dollar of receipts than either wholesaling or retailing. However, in classifying establishments engaged in manufacturing and also in mining, repair work, installation, construction, or other nonmanufacturing services, dollar receipts were used as the basis of classification because these activities require substantially comparable input per dollar of receipts.

Establishment Basis of Reporting.—The SIC is an establishment classification system, and the census of manufactures is conducted on an establishment basis. That is, a company operating establishments at more than one location is required to submit a report for each location; also, a company engaged in distinctly different lines of activity at one location is required to submit separate reports if the plant records permit such a separation and if the activities are substantial in size.

The requirement that distinct lines of activity at the same location be separately reported was selectively applied where the establishment produced and shipped significant amounts of products classified in different SIC industries. In widely varying degrees, this product overlap exists in many manufacturing establishments. Generally, the amounts involved are not significant enough to warrant the filing of separate reports, even if feasible. However, there are a number of locations at which large numbers of employees are engaged in each of two or more distinct lines of manufacturing as defined in the SIC. Frequently, companies organize their operations and their records separately where diverse activities are large (for example, with more than 100 employees in each line of activity) and choose to report them as separate plants. When they do not do so on their own initiative, the Census Bureau requests separate reports. For the most part, companies have responded favorably, particularly for very large operations where failure to "split out" the different activities would significantly distort the relationship of the industry and product statistics. Not infrequently, though, the two groups of products were made on the same production lines by many of the same employees and could not be distinguished sufficiently in company records to provide establishment-type reporting.

SIC industry defintions take account of special situations where otherwise separately classifiable activities are frequently combined at one location. For example, in the lumber area the definition of industry 2421, Sawmills and Planing Mills, General, recognizes the situation that sawmills may include logging operations. Similarly, in the pulp and paper area, pulpmills operated in combination with papermills are included in one report.

Coverage of Establishments.—The censuses of manufactures for 1947 to date have included establishments with one employee or more. In the 1967 census, for the first time, reports were not obtained directly from all such establishments. Approximately 120,000 small manufacturing firms[8] were excused from filing reports; under special arrangements which safeguarded the confidentiality of both tax and census records, limited data on payrolls, sales, and industry classification from the administrative records of the Social Security Administration (SSA) and the Internal Revenue Service (IRS) were made available to the Census Bureau for use in the 1967 economic censuses. Estimates for data other than payrolls and sales for these small establishments were constructed from historical industry ratios. The effect on industry aggregates is slight in most industries; for manufacturing as a whole, they account for only 1.2 percent of the value added. Detailed product and materials data for these small establishments were not estimated; the entire value of product shipments and cost of materials was imputed to a "not specified by kind" category.

In the censuses of 1921 through 1939, establishments with less than $5,000 value of products were excluded. For 1899 to 1919, the limit was $500. The change in the minimum size limit to an employment basis in 1947 did not appreciably affect the overall comparability of earlier census figures, except for the number of establishments.[9]

[7] Separate data for retail bakeries with baking on the premises were included in the retail census publications, however.

[8] The characteristics of these firms are discussed below in section 15.

[9] This point is discussed at greater length in the Introduction to the 1947 volumes.

A sample survey of manufacturing plants with no paid employees was conducted in conjunction with the 1958 census. While there were nearly 52,000 establishments in this category in that year, they accounted for only about one-quarter of 1 percent of the total value of shipments of all manufacturing industries. The proportion was higher for certain industry groups such as lumber and wood products and printing and publishing.

As indicated above, report forms were not mailed to 120,000 very small establishments. These establishments were assigned the industry classifications to which they had been coded in the 1963 Census of Manufactures, or if they had begun in business after 1963, on the basis of brief descriptions of the general activity of the establishment as reported to the Social Security Administration. Where the description is incomplete or there are relatively fine lines of demarcation between industries or between manufacturing and nonmanufacturing activity, the code assigned to an establishment could differ from that which would have been assigned on the basis of more complete product information. Therefore, the total establishment count should be viewed as an approximation rather than a precise measurement. The counts for establishments with 20 or more employees are far more reliable than the total number of establishments.

Primary and Secondary Products.—As applied in the economic censuses, the SIC coding system operates in such a way that the definitions become progressively narrower with successive additions of numerical digits. At one extreme are the 21 very broad 2-digit groups and at the other about 10,500 individual 7-digit products. In between are approximately 150 3-digit groups, 420 4-digit industries, and 1,200 5-digit product classes. The 7-digit products and 5-digit product classes are considered the primary products of the industry with the same first four digits as the product code. Accordingly, an establishment is classified in a particular industry if its production of the primary products of that industry exceeds in value its production of products of any other single industry. The industry code assigned to the establishment is derived from a summation of values for 7-digit product codes to their 4-digit industry and the selection of the largest such value as the establishment's industry classification. However as mentioned earlier, the industry classification of an establishment may be determined not only by the products it makes but also by the processes employed or materials used in making those products.

While some establishments produce only the primary products of the industry in which they are classified, it rarely happens that all the establishments in an industry specialize to this extent. Therefore, the general statistics (employment, payrolls, inventories, value added by manufacture, total value of shipments, capital expenditures, etc.) shown for an industry (tables 1 to 4 of the industry chapters in Volume II) reflect not only the primary activities of the establishments in that industry but also their activities of a secondary nature. The product statistics in table 6 of the industry chapters represent the total output of specific products whether they are produced by establishments classified in the same industry as the product or not. For this reason, in relating the industry statistics in the industry chapters, especially the industry total value of shipments (tables 1 to 4), to the product statistics (table 6), the composition of the industry's output as shown in tables 5A and 5B should be considered.

The extent to which industry and product statistics may be matched with each other is measured by the two ratios which are computed from tables 5A and 5B. The first of the ratios, called the primary product specialization ratio, describes the proportion of product shipments (both primary and secondary) of the industry represented by primary products. The second, defined as the coverage ratio, is the proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

Degrees of Integration.—In many industries, establishments making products falling into the same industry category use a wide variety of processes and materials to produce them. Also, within the same industry classification based on end products, may be included those establishments which are vertically integrated and those which put only the finishing touches on an already highly fabricated purchased item. For example, in the refrigeration industry, there are instances of almost complete process integration in which the production of the compressor and condensing unit, electric motor, and even the castings for those intermediate products, as well as the stamping of the case and the final assembly, are all carried on at one plant. In other plants, the condensing unit, the motor, and the case may be purchased and merely assembled into the finished product.

In some instances, nonintegrated plants have been placed in separate industry categories from the integrated plants. In many industries, the census provides separate statistics on departmental operations or on the production of intermediate commodities made and used in the producing plant. When an industry includes plants which ship a significant proportion of their output to other plants of the same company, separate figures are usually shown on the interplant transfers.

These differences in the integration of production processes, types of operations, and types of materials used should be taken into account when relating the general items (employment, payrolls, value added, etc.) to the product and materials data. For those industries where the integrated type of operations is of consequence, that fact is pointed out in the explanatory text for the industry.

Industry Code Resistance.—The production of many establishments is so evenly divided among two or more industry-determining product groups that the predominant groups (which can represent less than half of the total value if there are three or more groups) changes from year to year. In the ASM, these plants are prevented from shifting back and forth among industries due to minor shifts in product mix, by the application of a "resistance formula" in assigning industry classifications.

A resistance formula of the ASM type was first used in the 1963 Census of Manufactures and again applied in the 1967 census. In the 1967 census, the formula was applied only to establishments included in the 1966 ASM sample panel with certainty (that is, included with a probability of "1"). In general, certainty cases included all establishments of companies with at least one manufacturing plant with 100 employees or more (250 employees or more in the apparel manufacturing and printing and publishing industries). The formula gives approximately equal weight to the need for maintaining continuity in the establishment composition of an industry, thus improving the measurement of change, and the need for reflecting the industry's exact status at a point in time.

In the 1967 census, the industry classification of a certainty case was allowed to change from that assigned in 1966 under one of the following conditions:

(1) The value of the 1967 primary products constituted 60 percent or more of its total value of product shipments, or

(2) The value of the 1967 primary products, while less than 60 percent, was at least twice the value of the 1966 primary products in 1967, or

TABLE F. Value Added by Manufacture, by Regions, Divisions, and States: 1967

(3) The value of 1967 primary products, while not meeting either of the two prior conditions, exceeded the value of the 1966 primary industry's products in both 1967 and 1966 by at least 20 percent.

The Classification of Products and Materials.—In census industrial statistics, a commodity classification system based on the SIC is employed. The code numbers used in this system relate the commodity to the industry in which it is produced. For example, the 7-digit product code number 2023212 refers to canned evaporated milk. The first five digits of this code number, 20232, refer to the "product class" canned milk, and the first four digits, 2023, refer to the industry in which these products are made (the condensed and evaporated milk industry). The system is also applied to the coding of materials insofar as the first four digits are concerned; for example, the code number 013205 refers to whole milk used as a materials, and the first four digits of this code number, 0132, refer to the agricultural industry, dairy farms, where this product originates.

This SIC-based system is simpler than other systems for the coding of industrial products and materials used, since there is a direct numerical relationship between commodities and industries. Complications occur in the few SIC industries defined in terms of processes or equipment used as well as products made. As an example, women's sweaters are produced in knitting mills (industry 2253) and also in cut-and-sew shops (industry 2339). To retain the industry-of-origin concept, therefore, it is necessary to assign different product code numbers to women's sweaters, depending on where they are made.

The SIC-based commodity classification is used in the Census Bureau's entire industrial statistics program, including monthly, quarterly, and annual surveys, and also in the census of wholesale trade. The Bureau also publishes data on imports and exports in terms of SIC-based categories as well as the traditional Schedule B and TSUSA systems.[10]

5. GEOGRAPHIC CLASSIFICATION

Census Divisions and Regions.—In order to present census data at a level intermediate between the U.S. total and those for the

[10]Schedule B is the U.S. export classification while TSUSA is applied to imports.

TABLE G. The 50 Largest SMSA's Ranked by Value Added by Manufacture: 1967 and 1963

Standard metropolitan statistical area	Number of employees (thousands)	Value added by manufacture	1967 rank	1963 rank	Standard metropolitan statistical area	Number of employees (thousands)	Value added by manufacture	1967 rank	1963 rank

Note: The Flint, Mich., SMSA falls within the top 50 SMSA's, but is excluded from this table to avoid disclosing figures for individual companies.

individual 50 States and the District of Columbia, the Census Bureau has used regional groupings for over a century. Since the 1909 Census of Manufactures, the present nine geographic divisions have been used. Beginning with the 1939 census, the nine divisions were also classified into four geographic regions: Northeast, South, North Central, and West.

Not only are these groupings convenient for the summary presentation of census data below the U.S. level, but they are also essential to presenting a maximum of geographic information where the individual State data cannot be shown without disclosing figures for individual companies. (See section 22, "Confidentiality".) The relative importance of manufacturing among the regions, divisions, and States is shown in table F.

Standard Metropolitan Statistical Areas.—In addition to the data for the legally constituted geographic units (States, counties, and cities), all manufacturing totals are shown for approximately 230 standard metropolitan statistical areas (SMSA).[11] In the 1967 tables, detail for 2-, 3-, and 4-digit industries is shown for any SMSA when it would not disclose data for individual companies and the industry had at least 250 manufacturing employees. Prior to 1967, detail had not been shown for SMSA's with under 40,000 total manufacturing employment and only industry group figures were shown for SMSA's with 40,000 to 190,000 employees.

Standard metropolitan statistical areas are integrated economic and social units with a large volume of daily travel and communication between the central city (having 50,000 or more population) and outlying parts of the area. Each area (except in New England) consists of one or more whole counties. An area may contain not only highly industrialized counties but also adjoining counties which, though primarily residential in character, contribute significantly to the industrial counties' labor force and are socially and economically integrated with the central city. These areas were defined by the Federal Committee on Standard Metropolitan Statistical Areas for general-purpose use in presenting economic and social data. In the New England States, similar integration criteria have been applied in defining standard metropolitan statistical areas, but on a city and town basis, because towns are regarded as the significant unit in this region of the country.

[11] See appendix F for a description of each SMSA.

The requirement that each SMSA consist of county units (except in New England) sometimes results in the inclusion in an area of a considerable amount of territory which would not ordinarily be considered "metropolitan," much less "industrial." It is recognized that metropolitan areas could be more accurately defined in terms of smaller area segments such as minor civil divisions, but the usefulness of areas so defined would be limited by the fact that many types of economic and social data are available only on a county basis.

Each SMSA is designated by the name of the principal city of the area. In addition to the name of the principal city, the area title may include one or two additional city names.

Industrial Counties.—In addition to industry statistics for standard metropolitan statistical areas, table 7 of each State report, presents data by county for each industry group (2- and 3-digit) that had at least 450 manufacturing employees where it would not result in disclosure of figures reported by individual companies.

Cities with 450 Manufacturing Employees or More.—Summary totals and industry detail at the 2-digit level are shown for individual cities with 450 manufacturing employees or more, provided the data do not disclose information for individual companies.

Value added by manufacture in all SMSA's accounted for 76 percent of the U.S. total in 1967. The relative importance of the 50 largest SMSA's is shown in table G.

II. METHODS

6. PLANNING AND PREPARATION

General.—The Census Bureau has an obligation to meet public needs for timely and reliable information while holding costs and the burden on respondents to a minimum. During the planning stages of the 1967 economic censuses, the advice of trade and professional associations, Federal and State government agencies, individual companies, labor unions, and research and educational organizations was solicited in an effort to reach both the users of data and the respondents who supply the basic figures. Simultaneously, studies of the problems encountered in the 1963 censuses were undertaken, and proposals to improve the methods of collection, processing, and tabulation were explored.

A Major Processing Innovation.—Beginning with the 1954 economic censuses, the basic mailing lists have been obtained from Internal Revenue Service (IRS) and Social Security Administration (SSA) records.[12] These records were also sampled to develop statistics for retail and service establishments with no employees. After the 1963 censuses, it was decided to investigate the feasibility of making greater use of the data in the IRS-SSA records. This effort led, in the 1967 censuses, to the exemption of over 2,000,000 firms from the filing requirement, including 120,000 small manufacturers. Instead, census-type statistics for this group were developed from IRS-SSA records. Well in advance of the data collection phase of the censuses, plans for using these records for small employers were developed in close cooperation with those agencies. Specific procedures for this use and for assuring confidential treatment of individual tax returns were set forth in Executive Order No. 10911, dated January 17, 1961, and Treasury Decision No. 6547 of the same date. The basic records used were business income tax returns (IRS forms 1040C, 1065, 1120, and 1120S) and payroll tax returns (IRS form 941). The information obtained from these reports was the name and address, payrolls, and gross business receipts. In addition, an SIC industrial activity code was assigned by use of the permanent SSA records which indicate the industry or kind of business of each employer. Other census statistics for these small firms were imputed, using industry average ratios to payrolls and sales.[13]

Planning the Content of Questionnaires.—As in previous censuses, the content of the 1967 questionnaires was developed in consultation with a large number of organizations and individuals, representing both the manufacturers who supply the basic data and those who use the resulting statistics. Those consulted included government agencies, individual firms, labor unions, the American Statistical Association, the American Economic Association, the American Marketing Association, the National Association of Manufacturers, and all national manufacturers' associations covering specific industries.

A special effort was made to obtain the advice of individual manufacturers and their trade associations as to the content of the sections of the report forms dealing with the output of specific products. Drafts of the proposed 1967 product sections were circulated among 800 trade associations and about 4,000 manufacturing companies, both large and small. These inquiries followed the pattern of the 1963 census inquiries, with the introduction of new product detail reflecting suggestions received by the Census Bureau after the 1963 canvass. Small items (those valued at $5 million or less) were not retained in the list unless they were needed to simplify the classification of other products or were of strategic importance. The manufacturers and others consulted in this clearance procedure were requested to comment particularly as to whether the proposed detail was readily reportable from business records, and whether it represented the most appropriate set of items for the industry. A restriction was placed on proposals for additional detail; it was stipulated that the 1967 value of any new product category should exceed $15 million.

The thousands of comments and suggestions received in this clearance procedure were analyzed by the census staff. Finally, a detailed account of the review procedure and the decisions reached was forwarded to the Office of Statistical Standards, Bureau of the Budget, along with the Census Bureau's recommendations for the content of the product sections.

The final review of the content was performed by the Office of Statistical Standards with the assistance of the Advisory Council on Federal Reports. The latter organization is a group of business executives representing a cross section of industries and various professions within companies such as controllers, economists, and market research directors.

[12] The 1947 Census of Manufactures list was also obtained from the SSA.

[13] As discussed elsewhere in this introduction, the amount of imputation introduced by this procedure was only about 1 percent of the overall totals.

7. REPORTING FORMS

A representative selection of the reporting forms used in the 1967 census is reproduced in appendix D. The uses of each of them are discussed below.

General Forms.—This group of forms was used in the economic censuses generally, either as companywide reports or as reports for establishments whose classification was not known precisely in advance of mailing.

NC-X1A, Report of Company Organization.—This companywide report and its companion form NC-X1B were used in the precanvass of multiunit companies conducted in 1967. A more detailed account of their use is given in section 8, "The Mailing Lists."

NC-X3, General Schedule.—This questionnaire was designed to obtain information from small companies for which the industry code available in the SSA records was not precise enough to indicate which one of the standard census questionnaires should be mailed. The information provided on form NC-X3 was used to classify these companies by industry and tabulate their data in the appropriate census.[14]

NC-X6, Central Administrative Offices or Auxiliary Establishments.—Many multiunit companies maintain separate establishments to provide centralized administrative, management, or other supporting services for other establishments of the same company, but not for the general public or other companies. These establishments were asked to complete form NC-X6. The form contained questions on approximate employment for such functions as centralized administration, research and development, warehousing, and other auxiliary activities, and on the cost of research and development work performed by these nonmanufacturing establishments.

Annual Survey of Manufactures Forms.

MA-100.—This form is the establishment report used in the ASM since 1949 (with modifications). As mentioned above, this form was used in 1967 as the first sheet of the census of manufactures report for the establishments included in the ASM sample. The establishment's 1966 data were imprinted on the report form before mailing, thus aiding the respondent in following the instructions for the census. Item 9, "Quantity and value of products shipped and other receipts," on form MA-100 corresponds to item 18 on the census form MC-36B and its companion forms, the difference being that item 18 called for more detailed information on product shipments.

MA-101, Expenditures for Plant and Equipment for Manufacturing Establishments Under Construction.—This form was designed to obtain data on capital expenditures by large manufacturing firms for new plants not yet in operation at the end of the year. It was mailed to all multiunit companies with 250 employees or more. It was also mailed to any other company which indicated on one of its establishment report forms, in a special check-box section, that it had a plant under construction but not yet in operation. Each such plant was coded geographically and to a 4-digit industry from the description given of its expected activity. The information obtained on form MA-101 was included in the capital expenditures figures in the 1967 census tabulations. (For further discussion, see section 18, "Capital Expenditures.")

[14] The use of Form NC—X3 is also discussed in section 8, "The Mailing Lists."

Other Related Forms.—Form CB-51J-1, "Manufacturers Sales Branches and Sales Offices," which is reproduced in appendix D, is typical of the several forms used for these establishments in the census of business. The forms differed only in the kinds of products sold as listed in item 12. In item 5, line b provided verification of the classification of the establishment as a sales branch or sales office. If the line-b percentage indicated that more than half of the goods sold were not manufactured by the parent company, the establishment was reclassified into one of the merchant wholesaler categories.

NC-K1, Company Summary Report.—Each multiunit company with 250 employees or more received a form NC-K1, Company Summary Report, along with the appropriate questionnaires for its establishments. The NC-K1 requested consolidated company totals for key data items, such as receipts, new capital expenditures, inventories, and fixed assets. In addition, each company was asked to distribute the 1967 employment reported on its establishment questionnaires by its IRS-SSA employer identification numbers (EI numbers) and to compare these totals to the figures reported on its Treasury Form 941 tax returns. This comparision provided assurance that all domestic establishments of each large multiunit firm and its subsidiaries would be included in the censuses. Form NC-K1 served this operational purpose and also provided essential data for the enterprise statistics program described above in section 1.

Census of Manufactures Forms.—The questionnaire reproduced in the appendix, form MC-36B, is typical of the 180 forms used for operating manufacturing establishments. Each of these forms was designed to be used for a specific group of industries. For establishments included in the Annual Survey of Manufactures sample, form MA-100 was substituted for the front sheet of form MC-36B and its companion forms, since the content was virtually the same and it was desired to maintain continuity of reporting in the ASM. Whether or not form MA-100 was used, the inquiries on the 180 forms were identical except for the detailed questions on products shipped, materials used, and miscellaneous topics such as operations performed, equipment used, and delivery of products.

MC-171, Department of Defense Establishments, and MC-D4, Penal Institutions.—These forms were used to collect information on government-owned and government-operated manufacturing establishments. They were used for two types of establishments: (1) Manufacturing facilities owned and operated by the Department of Defense, and (2) prison industries (Federal, District of Columbia, and State). The data were prepared with the cooperation of the Department of Defense, the Department of Justice, and the District of Columbia and State prison systems. For Department of Defense installations, information was provided on employment, man-hours, payrolls, cost, and value of work done, by industry group and by State. For prison industries, however, only product data was requested. The data are presented in a special report included in Volume I and are not included in the totals for operating manufacturing establishments.

8. THE MAILING LISTS

General.—As discussed in section 6 above, the basic lists for 1967 were obtained from IRS-SSA records, supplemented importantly by the inclusion of the ASM list of 60,000 establishments. Since the IRS-SSA lists consist essentially of the names and addresses of companies rather than establishments,[15] however, it was

[15] The SSA records for multiunit companies identify "reporting units," which in many instances correspond to census establishments. The differences are such, however, that it was found necessary to obtain up-to-date lists of establishments as described in this section. Also, the Census Bureau concept of a company differs from the IRS—SSA definition, since the Census company includes all establishments under common ownership or control; in the IRS—SSA records, subsidiary corporations are often treated as independent companies.

necessary to follow separate procedures for multiunit companies (those operating at more than one location).

The Precanvass.—Multiunit companies were required to file at least one establishment report[16] covering each location. In order to select the appropriate questionnaires, it was necessary to determine in advance the nature of operations at each location. Beginning early in 1967, therefore, a "Report of Company Organization" (form NC-X1A)[17] was obtained from firms known to be multiunits from previous census records. All multiunit firms included in the ASM reported on form NC-X1A. A shorter questionnaire, form NC-X1B,[17] was also sent to other firms which were regarded as possible multiunits, including all manufacturers with 500 employees or more who were not on the NC-X1A list.

Both of these forms consisted essentially of a report on company affiliation and a list of the domestic establishments operated by the company. Before the forms were mailed, the company's establishments as identified in census records were prelisted. In the instructions for form NC-X1A, the respondents were asked to make any necessary corrections to this list. In addition, they were asked to supply descriptions of any new establishments not already listed, including their approximate size.

Approximately 700 large multiunit companies were segregated for special handling in the precanvass because problems involving overlap and duplication were anticipated. Many of these companies were active in retail and wholesale trade as well as in manufacturing. The instructions for the precanvass were reviewed with these firms in personal discussions with officials of their accounting departments, in order to make certain that the procedure was understood and the establishments properly described on form NC-X1A.

Initial Control File.—This file, consisting of about 7 million names and addresses of companies, was assembled from IRS-SSA records and other sources including the 1963 economic census records. For manufacturing, the ASM records were incorporated in the file.

Single-Unit Companies.—The mailing lists for single-unit companies (those operating at only one location) were developed from the initial control file by removing out-of-scope companies (those whose activities were not to be surveyed in the economic censuses) and those identified as multiunits in the precanvass. A special survey of out-of-scope companies with more than 50 employees in selected industries was conducted to doublecheck their eligibility, and some names were added to the mailing list as a result.

The final step was to set aside the records of the small companies for which census-type statistics were to be developed from administrative records. The remaining records constituted the mailing lists for single-unit companies.

General Schedule.—While the lists assembled in these ways were generally adequate in providing sufficient industry information to determine the proper form for mailing, a number of the records did not have precise industry information associated with them. Form NC-X3, "General Schedule," which is reproduced in appendix D, was mailed to all such companies. Since it was assumed that these companies were quite small, only a few key figures were requested. On the basis of the information reported, these reports were coded and included in the basic tabulations. If form NC-X3 indicated that the company was actually large, it was later requested to file one or more of the appropriate standard questionnaires.

9. GEOGRAPHIC AREA CODING

Accurate and complete information on the physical location of each establishment is required in order to tabulate the census data by SMSA's, counties, and cities. As in previous censuses, the post office address and ZIP code of the establishment were not always accepted as defining the physical location, but respondents were required to describe the actual location in terms of street address, city, town or village, county, and State. For establishments located in rural territory, the name or number of the nearest highway was requested and the distance from the nearest town or other urban place.

In censuses prior to 1963, clerks assigned geographic code numbers to each establishment based on the description furnished by the respondent. This process was slow and required careful verification. Beginning with 1963, a computerized system was developed which assigned an area code number and a prefix symbol to the mailing address before the questionnaires were mailed. The prefix symbol indicated whether or not the mailing address was clearly acceptable as describing the physical location. If there was any question about its acceptability, the respondent's description was later carefully reviewed after the questionnaire was received. The assignment of tentative code numbers by the computer was based on extensive reference files containing nearly a million business names and addresses.

The geographic coding system used in the 1967 economic censuses was based on the 1963 system with some improvements and revisions. The major changes included expanding the address reference file, and use of the ZIP code as part of the procedure for matching addresses against the reference file.

10. DATA COLLECTION

General.—Although the greater use of administrative records in 1967 substantially reduced the number of companies canvassed directly, there remained nearly 2 million which were required to file, including about 175,000 manufacturers. The assembly of several hundred different questionnaires into mailing packages, correctly labeled and coded, combined with the correct instruction booklets, was an extensive operation.

Instructions.—Several general instruction booklets were prepared to assist respondents in completing questionnaires for the 1967 economic censuses. In addition, separate detailed instruction manuals were printed for establishments in a few kinds of business and in certain mineral industries with peculiar reporting problems, as well as for manufacturing establishments reporting on the detailed standard forms.

Timing.—The bulk of the 1967 questionnaires were mailed in mid-February 1968 with a due date of April 30, about 2 months later than the corresponding due date for the 1963 censuses. Adoption of the April 30 due date, which had been urged by accountants, was based on the assumption that reports would be filed more promptly if their preparation followed that of Federal income tax returns, which were due April 15, and that the "lost" 2 months would be gained back. This turned out not to be the case. The collection phase was not completed until early November 1968, about 2 months behind the 1963 record.

[16] If two or more distinct lines of activity were carried on at one location, separate reports were obtained under some circumstances. (For a complete discussion, see "Establishment Basis of Reporting" in section 4, above.)

[17] This form is reproduced in appendix D.

Followup.—Companies which did not return their questionnaires by the due date had to be reminded that their returns were overdue. A reminder card was used for the first followup, and form letters used in the five subsequent mailings. Two basic letter formats were used, one for multiunit companies that had returned questionnaires for some but not all establishments, and the other for companies that had not responded at all.

The last followup letter was mailed in October 1968. Estimates based on data from administrative records were included in the census tabulations for the relatively small number which had not responded by the closeout date in November 1968. Thus, all companies and establishments included in the original mailing list (except those determined to be inactive during 1967) were represented in the final statistical results, either by actual returns or by proxy returns generated from administrative records. A special effort was made to obtain actual returns from all large firms, so that the volume of business represented by proxy returns was relatively very small.

11. DATA PROCESSING

General.—The editing,[18] coding, and tabulation of data for the 5 million establishments represented in the 1967 economic censuses was a complicated task requiring extensive advance planning and careful coordination among the Census Bureau's organization subdivisions. Automatic data processing and other advanced techniques were used in all phases to a considerable extent.

Facilities.—In the mail collection phase, the questionnaires were returned by respondents to the Census office at Jeffersonville, Ind., where most noncomputer (that is, clerical) processing operations were performed. The Jeffersonville functions consisted mainly of preliminary screening of questionnaires, carrying on routine correspondence with respondents, punching cards, and transmitting the punched data to Washington on a high speed transmission system. The Washington staff handled computer operations, and all operations in connection with the use of IRS and SSA records.

Preliminary Screening.—After checking in against control lists and assigning geographic codes, the questionnaires were reviewed clerically to see that they conformed to certain minimum requirements before further processing. In the case of multiunit companies, the sum of employment and payrolls reported on its establishment questionnaires was compared with the control totals reported on form NC-K1, "Company Summary Report." Questionnaires received from ostensibly single-unit firms were reviewed to ascertain whether they had become multiunits through merger or acquisition. All questionnaires were reviewed to see that the entries were legible and punchable, and that entries appeared for a number of key items. For manufacturing establishment returns, the key items were payrolls and value of shipments. Questions arising in the screening operation were resolved by writing or telephoning the respondents. Complex problems involving multiunit companies were either handled by a special task force of experienced analysts in Jeffersonville or were referred to the Washington office.

Computer Editing.—All of the establishment records from the 1967 censuses of manufactures and mineral industries underwent computerized processes of screening and detailed testing of data. While most of these programs were newly devised in 1967, they were largely based on similar programs in use during the 1963 censuses. As in 1963, average values and tolerance limits for key operating ratios (for example, cost of materials per dollar of shipments, payroll per employee, production-worker wages per man-hour, etc.) played a fundamental role in the editing process. However, more extensive testing and more sophisticated routines for adjusting data which failed the tests were incorporated into the 1967 programs. The need for computer editing may be judged by the fact that more than half of all 4-digit SIC industries had one or more data cells changed by more than 5 percent as a result of application of these programs.

In sequence, the computer programs used included a Housekeeping and Screening Edit, a Coverage Control and Matching Edit, a Magnitude Edit, a General Statistics Edit, an Intercard Intercolumn Edit, a Product and Materials Edit, a Duplicate Removal Program, and various programs of referral and of aggregate testing. These programs are described in outline form below. Also included within this sequence were programs of geographic coding and of industry coding, which are described elsewhere in this introduction.

The Housekeeping and Screening Edit was designed to inspect each record for the presence of basic information such as identification numbers, geographic codes, and source codes (that is, ASM, census of manufactures, or census of minerals). This program also included some simple data adjustments, such as the replacement of a missing total by a corresponding sum of detail.

The Coverage Control and Matching Edits were a system of programs which checked the consistency of clerically assigned coverage codes with reported information on the ownership status of the establishment. For ASM establishments, the program included matching with the 1966 ASM record file to identify corresponding prior-year records. In the 1967 Census of Manufactures, nearly 339,000 establishments were initially defined as being within the scope of manufacturing. Of this number, approximately 26,000 were identified as having no activity during 1967. Of the remainder, more than 11,000 were rejected from the combined output of the Housekeeping and Screening Edit and from the Coverage Control and Matching Edit. This latter number was clerically reviewed, corrected where necessary, and recycled back into the computer.

The Magnitude Edit was designed to test the size of two key items, payrolls and value of shipments. For ASM establishments, these items were compared with the corresponding entries for 1966, and were accepted if satisfactory. If not accepted, the ASM records were channeled through the standard edit, which compared payrolls to a historical employment-size code. Payroll figures passing the test were then used, in conjunction with cost of materials, in testing the value of shipments.

When failures in the magnitude tests were encountered, a fixed sequence of attempts to adjust the data were performed, which included dividing a reported figure by 1,000 (a common error was the reporting of values in dollars rather than in thousands of dollars as requested), or replacing a total by a sum of detail where these differed. If the corrective procedures of the Magnitude Edit were unsuccessful, the schedule was rejected for clerical inspection, correction where necessary, and recycling. This occurred for about 18,000 establishments.

The General Statistics Edit tested key operating ratios and adjusted the record or flagged it for later attention if it failed the test. Fifty-two such ratios were assigned for use in testing census of manufactures records, and 41 1966-67 ratios of change were used in testing the ASM reports. The tolerance limits and average values for these 93 ratios were based on the limits used for the corresponding tests in the 1963 census, with some correction and updating based on more recent ASM information.

[18] In data processing, the term "editing" means the review of information collected on questionnaires or from other sources, with the objective of locating and correcting erroneous entries.

In the presence of ratio failures, the computer program was designed to determine the component of the ratio which was most likely to have caused the failure. This was done by a process of inspecting other ratios containing each of the suspect components, and by computing an overall weighted-reliability index for each. The component with the lowest reliability index was judged to be incorrect. The computer then attempted to adjust the questionable figure by a process of "rounding" (multiplying or dividing by successive powers of 10), substitution of a total by a sum of detail, or by imputation based on one of the several ratios in which the suspect component was contained. After each such attempted adjustment, the new figure was accepted if it resulted in an improved reliability index.

In addition to testing and correction of reported information, the General Statistics Edit was the vehicle for the imputation of data for the 120,000 companies designated as administrative-record cases, as well as data for companies which failed to report in the mail canvass. Imputation for all reasons, failure to report as well as administrative records, accounted overall for about 3 percent of the total value of shipments. Records were not rejected and removed from the computer tapes in the General Statistics Edit, but were flagged and printed out for review by an analyst whenever the computer made a large adjustment, found a large year-to-year change, or could not make an acceptable adjustment after test failure. Excluding administrative records, about 40,000 such cases were printed out for review and possible correction.

The Intercard Intercolumn Edit was designed to test specific relationships among products, materials, and special inquiries. The record was flagged for inspection if the test failed; some 64,000 records were printed out for review from this edit.

The Product and Materials Edits were performed after the data on products and materials had been extracted from the basic establishment records, and assembled in product (or material) sequence. The edits were designed to inspect the reported quantities of production and of consumption after the corresponding values were tested and found acceptable. Unit values, in terms of dollar value per unit of quantity, were computed and ranked from highest to lowest. The most extreme values were removed, and the truncated data were used in the formulation of parameters (average deviation, central value, and upper and lower tolerance limits) which were printed out for review by analysts. This routine differs from those in other edits in that the parameters for editing were developed from the data at hand rather than from historic data or predetermined reasonableness limits.

The Duplicate Removal program was designed to identify and eliminate duplicate establishment records from the census. The sources of duplication were many; imputed records which were followed by the late receipts of a report from the respondent was typical. The program resulted in the elimination of nearly 6,000 duplicate establishment records from the census file.

As in the 1963 census, this preliminary round of computer editing and professional correction was followed by a more detailed review of establishment records. Among the devices used at this stage were an "outlier" program which printed out establishment reports of dubious quality in terms of their internal consistency. The outlier program used some of the same ratios as the General Statistics Edit, but with parameters updated to reflect the characteristics of 1967, rather than earlier, data. Records with one or more suspicious ratios were printed out for review. In addition, aggregates of records at the industry and the geographic cell level were inspected with ratio tolerance limits adjusted to reflect the number of establishments contributing to the cell.

12. COVERAGE AND ACCURACY

Since the list of companies obtained from IRS and SSA records was considered to be complete, no field coverage check was conducted. The precanvass and other special procedures for multiunit companies described in section 8, "The Mailing Lists," and section 10, "Data Collection," were designed to secure complete lists of establishments, thereby amplifying the IRS-SSA company list. Control totals in terms of employment and payrolls of multiunit companies were also used to verify the completeness of establishment coverage. This procedure is discussed in section 11, "Data Processing."

Comparison of statistics tabulated from the census of manufactures with the Census Bureau's Current Industrial Reports series, or with data originating with other agencies was possible in many instances, thus providing a further confirmation of completeness and accuracy. These figures range from employment and wage totals compiled by the Bureau of Labor Statistics to detailed commodity output figures published by the Internal Revenue Service, the Fish and Wildlife Service, and the Department of Agriculture. In the industry reports in Volume II, differences between the census of manufactures and other statistics are explained wherever possible. Census of manufactures comparability with broad measures such as national income, new capital expenditures, and production indexes are discussed elsewhere in this introduction. The Census Bureau's other procedures designed to improve the accuracy of the census data are discussed above in the sections on data collection and processing. Comments on the valuation of intracompany shipments by multiunit companies are included in section 15.

III. COMMENTS ON STATISTICAL MEASURES AND TABLES

(Explanations and definitions of the various measures of activity for which statistics are compiled in the census of manufactures are presented in appendix A. In the following sections, the limitations and other characteristics of some of these measures are discussed, the content of the statistical tables is described, and comparisons with other statistical series are presented.)

13. EMPLOYMENT AND PAYROLLS IN ADMINISTRATIVE OFFICES AND AUXILIARY ESTABLISHMENTS

In the industry chapters of Volume II, the data on employment and payrolls refer to operating manufacturing establishments and are so described. In the summary tables, the employment and payrolls of central administrative offices and auxiliary establishments are also included. However, whereas the operating establishments were coded to a 4-digit manufacturing industry, the administrative offices and auxiliaries were coded only to the 2-digit industry group of the establishments they served. In most of the tables with industry detail, the administrative offices and auxiliaries are shown as a separate industry group, but statistics for them by 2-digit industry appear in each volume in the General Summary tables. The relative importance of administrative offices and auxiliaries has increased substantially in recent years, because of a tendency to centralize functions formerly

performed in manufacturing plants. Such functions include accounting (particularly where computerized), warehousing, repair services, and miscellaneous others. As indicated in table H, this tendency was quite marked between 1954 and 1963, but there was less relative increase between 1963 and 1967.

TABLE H. Employment in Central Administrative Offices and Auxiliaries and in Operating Manufacturing Plants: 1967 and Earlier Census Years

Census year	Employees in operating manufacturing establishments		Employees in central administrative offices and auxiliaries		
	Thousands of employees	Percent change from previous Census year	Thousands of employees	Percent change from previous Census year	Percent of total employment[1]
1967.....	18,492	+14.0	830	+14.3	4.3
1963.....	16,235	+5.3	726	+20.6	4.3
1958.....	15,423	-1.4	602	[2]+32.9	3.8
1954.....	15,645	(NA)	453	(NA)	2.8

Source: Census of Manufactures.

Standard notes: (NA) Not available.

[1]The total includes manufacturing establishments, central administrative offices, and auxiliaries.

[2]The apparent increase from 1954 to 1958 is believed to be somewhat overstated, because coverage of administrative offices and auxiliaries was more complete in the 1958 census.

14. MATERIALS

In addition to the total cost of materials which every establishment was requested to report, quantity and cost information was collected for approximately a thousand specific materials.[19] About 360 of these were "complete coverage" materials; i.e., every industry that consumed appreciable quantities of the material was canvassed so that the data would represent at least 90 percent of manufacturing consumption. For the remaining materials, information on consumption was obtained on a more limited basis, generally only in those industries in which the materials were important inputs. Detailed consumption information was collected in the standard materials inquiry, in the product inquiries (for items which were produced and consumed in the same plant), or in a few instances in special inquiries. The resulting statistics are presented mainly in tables 6A and 7A of the industry chapters, Volume II.

Because American industry uses an enormous variety of materials, the choice of materials for which "complete coverage" consumption data (90 percent or higher) were obtained had to be strictly limited. The selection of a particular material for such coverage was based on the following criteria:

(1) The importance of the material as measured by the total value of U.S. consumption of the material;

(2) The percentage of total consumption accounted for by manufacturing establishments;

(3) The availability of consumption information from manufacturers' records; and

(4) In certain instances, other factors such as the strategic importance of the material or the availability of historical data on the use of the material.

The materials included on a limited-coverage basis were chosen not only because they constituted important inputs for particular industries but frequently because they provided information necessary to classify plants by SIC industry. In using the detailed data on materials consumed which appear in table 7A in the industry chapters of Volume II, the following limitations should be noted:

(1) Materials were reported for the establishment as a whole and no attempt was made to ascertain how much of the material was used in each of various products. Thus, the industry totals appearing in table 7A represent consumption in secondary products as well as primary products of the industry represented. The extent of secondary production is measured by the specialization and coverage ratios shown in table 5A of the industry chapters.

(2) Attention should be paid to the codes ending in "000" and captioned "materials, parts, containers, and supplies, not specified by kind." The amounts appearing on these lines represent imputed totals for establishments whose statistics were developed by use of administrative records, and totals for other establishments which failed to report their consumption in specific terms. Thus, for most industries, the specific categories are understated. A judgment on the statistical significance of the understatement for each industry may be made on the basis of the relationship of the value shown for the "not specified by kind" (code 000) line compared with the total of materials, components, parts, containers, and supplies for the industry.

(3) Establishments consuming less than a specified amount of material were not requested to report consumption of the material separately. For the majority of individual materials, the minimum amount was $5,000. The use of this cutoff is not believed to have had a significant effect on the totals.

15. VALUE OF SHIPMENTS BY MULTIUNIT COMPANIES

General.—Except for a few industries as indicated in appendix A, the respondents were instructed to report net selling values, f.o.b. plant, after discounts and allowances and excluding freight charges and excise taxes. Multiunit companies were instructed to report for each establishment as if it were a separate economic unit and, in particular, to report interplant transfers at their full economic value, including not only the cost of production but also a reasonable proportion of company overhead and profits. Since there is no advertising or other selling cost involved, it would be expected that the value per unit of such transfers would be less than that for commercial sales. The plant receiving the transferred goods was instructed to include them in its cost of materials, valued as at the shipping point plus the cost of freight and other handling charges.

In the case of goods transferred to sales branches, or sold through separate sales offices, the implication of the "f.o.b. plant" instruction is that the value is at a somewhat lower level than the final invoice value, because the cost of selling (mainly the cost of operating the sales branch or office) is excluded.

[19]See 1967 Censuses of Manufactures and Mineral Industries, *List of Materials Consumption Items,* MC67-6, for a more detailed account of the collection of data on materials consumed.

In practice, there is reason to believe that these instructions were not followed by all companies. In a recordkeeping practices study of 54 multiunit companies conducted a few years ago, it was found that about half of them had reported interplant transfers of semifinished products at commercial or market prices, which tend to be somewhat higher than the "cost plus overhead and profit" requested in the census instructions. In the case of finished products transferred to separate selling organizations, half of the companies interviewed valued the products at their final or invoice price, which again would be somewhat higher than the "f.o.b. plant" transfer value requested. It appears from this study and other observations that the value of shipments of products reported by multiunit companies tends to be overstated. For products characterized by a substantial amount of interplant shipments, separate quantity and value figures were requested on the census forms. Data on these shipments, the unit value of which is less accurate than the unit value for shipments outside the company, are presented separately in table 6A in the industry chapters of Volume II.

Individual Products.—In the 1967 census program, information was collected on the output of approximately 10,500 individual product items.[20] The term "product" as used in the census of manufactures represents the finest level of detail for which output information was requested. Consequently, it is not necessarily synonymous with the term product as used in the marketing sense. In some cases it may be much more detailed and in other cases it is more aggregative. For example, pharmaceutical preparations were reported in terms of 160 products, while canned meats was a single product. Frequently, large aggregative values at the product level indicated that detailed production figures were available from other government sources or reliable private surveys.

Some 5,500 of the product items were listed separately on the 1967 census report forms. Data for the remaining 5,000 products were obtained in the monthly, quarterly, or annual commodity surveys comprising the Current Industrial Reports series of the Census Bureau. Totals for the year 1967 for these items as derived from the commodity surveys are shown in the "product shipped" table (table 6) in the industry chapters of Volume II together with the tieline total value collected in the census for reconciliation.

Typically, both quantity and value of shipments information was collected. However, if there was no meaningful physical quantity measure that could be reported by manufacturers, only value of shipments was collected. For products which are used to a large degree within the same establishment as materials or components in the fabrication of other products, total quantities produced and often the quantities consumed within the plant were collected. Typically, the information on production was also collected for products for which there are significant differences between total production and shipments in a given year because of wide fluctuations in finished goods inventories. Alternate measures of output of products, such as value of work done for products with long production cycles, were used as appropriate and feasible.

Classes of Products.—For the purpose of summarizing the product information, the separate products were aggregated into classes of products which were, in turn, grouped into all primary products of each industry. The code structure used is a 7-digit number for the individual product, a 5-digit code for the class of product, and a 4-digit code for the total primary products in an industry (see section 4 for application of coding structure to the assignment of SIC codes for establishments).

[20]See 1967 Census of Manufactures, MC67-1, *Numerical List of Manufactured Products,* and MC67-2, *Alphabetic List of Manufactured Products.*

The 10,500 product items in the 1967 census (including products from the Current Industrial Reports program) were grouped into approximately 1,200 separate classes. Products were grouped into product classes to bring out significant differences in the broad types of products within a 4-digit industry. General similarity of the kind or purpose of the products or of the manufacturing processes, type of markets, or of materials used, were the basis for product combinations. The economic significance of the class was also taken into account; residual products of an industry were grouped when the products were not sufficiently significant in dollar value to warrant separate classes.

As a result of the increased number of respondents included in the product-class shipments totals, these categories lend themselves to many more cross tabulations than do the 7-digit products, without disclosing information about the operations of individual companies. In the industry chapters of Volume II, table 6B provides information on the value of shipments of product classes by State; and table 5B, by industry of the establishment producing them. The latter table is the best vehicle for showing the primary and secondary product mix of an industry, as well as the interrelationship between the 4-digit industry value of shipments and the 4-digit product group value of shipments. In table 8, the product class is used to provide finer industry-type general statistics by classifying establishments within an industry according to the degree to which they specialize in producing a specific class of products.

The class-of-product concept was incorporated by the Census Bureau into its own program with the 1947 Census of Manufactures after it developed the technique in the compilation of World War II production statistics. Product classes formed the basis of collecting product information in the annual survey of manufactures when that survey was initiated in 1949. The classes have been revised over the succeeding years to improve the balance and significance of product combinations within each industry and to keep abreast of the growth and decline of products.

Effect of Use of Administrative Records on Product Data.—As noted elsewhere in this introduction, 1967 census statistics for about 120,000 small manufacturers were developed by use of IRS and SSA records. Since the SSA records were coded only to the 4-digit SIC level, it was not considered feasible to estimate the product output of these small companies in terms of specific 5-digit product classes or 7-digit products. The total value of output was therefore coded to the 4-digit level and published separately in table 6A of the industry chapters of Volume II. In table I, page 18, these data have been summarized together with other undistributed 4-digit totals reported by the larger companies. It will be seen from table I that the contribution of the small companies to product totals was of little importance except in lumber, furniture, and printing and publishing (groups 24, 25, and 27). The large companies which for various reasons reported only in terms of group totals were of somewhat more importance, accounting overall for about 3 percent of the total value of product shipments.

Nominally, the shipments of "small companies" as shown in table I represent the output of all establishments with less than 10 employees. Actually, less than half of the value of shipments of establishments with less than 10 employees was obtained from administrative records. This was due to several factors, the most important of which were—

(1) Many of the establishments with less than 10 employees were owned by multiunit companies and were covered in the mail canvass.

TABLE I. Value of Products Not Specified by Kind: 1967

(Millions of dollars)

Product group code	Total value of product shipments	Products not specified by kind			
		Total	Large companies	Small companies[1]	Percent attributable to small companies
Total	539,470.1	23,387.2	17,884.6	5,430.6	1.0
20	78,650.9	4,088.2	3,326.7	761.5	1.0
21	4,589.7	46.4	44.2	2.2	.1
22	20,141.0	691.2	550.1	69.1	.3
23	19,748.9	1,992.5	1,686.0	306.5	1.6
24	10,585.7	1,614.7	774.7	840.0	7.9
25	8,110.2	702.6	485.7	216.9	2.7
26	20,049.3	575.3	512.4	62.9	.3
27	20,878.9	1,805.2	923.1	882.1	4.2
28	40,013.1	1,030.3	851.9	178.4	.5
29	20,992.8	159.2	130.0	29.2	.1
30	12,236.8	512.5	414.6	97.9	.8
31	4,849.8	238.8	180.8	58.0	1.2
32	13,596.9	585.6	404.3	181.3	1.3
33	55,926.8	670.6	607.9	62.7	.1
34	32,928.9	2,720.7	2,342.1	378.6	1.2
35	46,076.8	2,874.8	2,223.4	651.4	1.4
36	39,429.2	937.8	793.5	144.3	.4
37	64,976.3	854.7	718.3	136.4	.2
38	8,759.5	340.2	263.3	76.9	.9
39 plus 19	16,928.6	945.9	651.6	294.3	1.7

Note: Based on preliminary data. These values represent product shipments, irrespective of the industry in which the products were made, and therefore differ from the industry group totals shown in the General Summary tables.

[1]Estimates derived from administrative records. See text for further discussion.

(2) Questionnaires were mailed to about 6,000 of the companies identified as having less than 10 employees. Part of these were the small companies included in the ASM sample; the rest were included in the mail canvass to improve the estimates of general statistics, products, and materials.

(3) Some companies identified originally as having 10 employees or more turned out to have less than 10 in 1967.

(4) Some companies identified originally as having less than 10 employees were found to have been out of business in 1967.

Another factor tended to reduce the value of products not specified by kind attributed to small companies, thus affecting tabel I particularly. This was the fact that some 4-digit industries were represented by only one product category (an example is industry 3273, Ready-Mixed Concrete). Administrative-record estimates for products such as this were treated as specific information and not tabulated under the "not specified by kind" heading.

These factors taken together explain why the value of products "not specified by kind" attributed to small companies in table I is only 1 percent of the total, while the 157,000 establishments with less than 10 employees account for 2.3 percent of the total.

The data for many of the specific 7-digit products shown in table 6A are understated.

16. DUPLICATION IN COST OF MATERIALS AND VALUE OF PRODUCTS

The aggregate of the cost of materials and value of shipments figures for industry groups and for all manufacturing industries includes large amounts of duplication since the products of some industries are used as materials by others. With some important exceptions, such as SIC 3312, Blast Furnaces and Steel Mills, this duplication is not significant within individual 4-digit industries. However, it is significant at the 2-digit and 3-digit industry level because these group totals often include industries which represent successive stages in the production of a finished manufactured product. Examples are the addition of flour mills to bakeries in the total value of shipments of SIC Major Group 20 and the addition of pulpmills to papermills in Group 26. Economists have estimated that the value of manufactured products exclusive of such duplication—the value of finished manufactures—tends to approximate two-thirds of the total value of shipments reported in the census of manufactures.

Because the amounts of duplication contained in the cost of materials and value of products figures cannot be measured with any degree of precision, caution is urged with their use when they are provided at the 2- and 3-digit industry group level.

Even where no significant amount of duplication is involved, value of shipments figures are of limited use as measures of the relative economic importance of individual manufacturing industries or geographic areas because of the wide variation in ratio of materials, labor, and other processing costs to value of shipments, both among industries and within the same industry. To a large extent, value added by manufacture does not have these limitations and is therefore a better measure for comparison.

17. VALUE ADDED BY MANUFACTURE

General.—Value added by manufacture is derived by subtracting the total cost of materials (including materials, supplies, fuel, electric energy, cost of resales, and miscellaneous receipts) from the value of shipments (including resales) and other receipts and adjusting the resulting amount by the net change in finished products and work-in-process inventories between the beginning and end of the year.[21]

Value added avoids the duplication in the value of shipments figure which results from the inclusion of the shipments of establishments producing materials and components along with the shipments of establishments producing finished products. It does not exclude purchased business services, as does the national income concept described below.[22] Nevertheless, it is considered to be the best value measure now available for comparing the relative economic importance of manufacturing among industries and geographic areas.

---

[21] For a few industries (for example, aircraft, ship building) where value of work done is substituted for value of shipments, no adjustment is made for change in inventories. In a few other industries where value of production is collected, the inventory adjustment is made only on the basis of change in work-in-process inventories.

[22] Collection of data on the cost of purchased business services at the plant level presents many problems. Advertising by multiunit companies, for example, is frequently charged at the company level and the cost either not allocated, to plants or if allocated, only as part of a broader company overhead category. National income data, on the other hand, are compiled in part from company rather than plant data, such as the IRS *Statistics of Income* in which advertising is presented as a separate cost item based on company reports.

TABLE J. Comparison of National Income Originating and Value Added by Major Industry Group: 1967

(Billions of dollars)

SIC code	Industry group description	National income originating[1] (1)	Value added by manufacturing (2)	Col. (1) divided by col. (2)
	Manufacturing	195.2	262.0	0.75
	Nondurable goods	75.5	109.5	.69
20	Food and kindred products	16.3	26.6	.61
21	Tobacco manufactures	1.3	2.0	.65
22	Textile mill products	6.2	8.2	.76
23	Apparel and other fabricated textile products	7.5	10.1	.74
26	Paper and allied products	6.7	9.8	.68
27	Printing, publishing, and allied industries	9.9	14.4	.69
28	Chemicals and allied products	14.1	23.6	.60
29	Petroleum refining and related industries	6.5	5.4	1.20
30	Rubber and miscellaneous plastics products	4.7	6.8	.69
31	Leather and leather products	2.2	2.6	.85
	Durable goods	119.7	152.7	.78
24	Lumber and wood products, except furniture	4.2	5.0	.84
25	Furniture and fixtures	3.2	4.2	.76
32	Stone, clay, and glass products	5.8	8.4	.69
33	Primary metal industries	15.3	20.0	.77
34	Fabricated metal products	13.4	18.0	.74

36	Electrical machinery	18.6	24.5	.76
19, 37	Transportation equipment and ordnance, except motor vehicles	15.3	33.8	.86
	Motor vehicles and motor vehicle equipment	13.6		
38	Instruments	5.2	6.4	.81
39	Miscellaneous manufacturing industries	3.3	4.6	.72

[1] Source: Survey of Current Business, July 1970.

National income originating in the manufacturing sector, as developed in the national accounts maintained by the Office of Business Economics (OBE) is somewhat similar to value added in concept, but there are important differences. National income is the aggregate earnings of labor and capital which arise in the current production of goods and services in the manufacturing sector. Thus it measures the total factor costs incurred, and is a more "net" conception of value added than that which it has been found feasible to compile in the economic censuses, on an establishment basis. National income excludes, in addition to cost of materials, such other costs as depreciation charges, State and local taxes (other than corporate income taxes), allowance for bad debts, and purchases of services from nonmanufacturing enterprises, such as contract costs involved in maintenance and repair, services of development and research firms, services of engineering and management consultants, advertising, telephone and telegraph expense, insurance, royalties, patent fees, etc.

In part, the national income estimates are prepared from company rather than establishment data. This method results in the inclusion of some part of the net value added by nonmanufacturing establishments of companies classified as being primarily manufacturing, and conversely, in the exclusion of some part of the net value added by manufacturing establishments of companies classifed as primarily nonmanufacturing. It is believed that for manufacturing as a whole the net effect increases national income. In the Petroleum and Coal Products major industry group, nonmanufacturing activities of manufacturing companies are so significant that this is the one group in which national income exceeds value added, as shown in table J.

Historical Comparison.—Whatever changes have taken place in the relative importance of the costs included in value added but excluded from national income have been gradual. As shown in table K, the ratio between the two figures has been fairly constant over the past decade, and the 1967 ratio is rather close to that for 1939.

TABLE K. National Income Originating in Manufacturing and Value Added by Manufacture: 1939 to 1967

(Billions of dollars)

Year	National income originating in manufacturing (1)	Value added by manufacture (2)	Col. (1) divided by col. (2)
1967.....	195.2	262.0	0.75

[1]Unadjusted.

Reconciliation with National Income Components.—Figures are not available to permit a reconciliation of the estimates for value added in manufacturing and the national income originating in manufacturing for the current period. However, in 1957, the Census Bureau conducted a special survey, MC-D11, "Selected Costs and Assets of Manufacturing Establishments," which collected information on some of the costs included in value added for services purchased from other sectors or excluded from the national income estimates. These specific costs which accounted for about $15 billion of the $148 billion of value added in 1957 were maintenance and repairs, $4.5 billion; insurance, $.7 billion; property taxes, $1.5 billion; rental payments, $1.4 billion; and depreciation, $7.3 billion. The residual value added, $132 billion, was approximately $16 billion in excess of national income of $116 billion.

Table L presents an approximate reconciliation of national income and value added figures for manufacturing in 1957. The national income estimates for payrolls and other factor income in that year are based on the unrevised national income figures which are somewhat lower than the revised estimate appearing in table K. It should be noted that the labor costs included in national income and value added are reasonably close despite the fact that they are computed on a slightly different basis. If the proprietary and profit incomes of the company-based national income estimates are allocated to the establishments included in the census of manufactures, value added exceeds national income by $35 billion of which $15 billion is attributable to costs reported on survey MC-D11. Somewhat more than half of the $35 billion excess represents the inclusion in value added by manufacture of purchased business services arising in other economic sectors; the remainder reflects conceptual differences arising from the inclusion, in value added, of indirect business taxes and depreciation which are excluded by definition from national income.

18. CAPITAL EXPENDITURES

Under this heading, manufacturers were instructed to report expenditures of the type chargeable to fixed assets accounts, for which depreciation reserves are normally maintained. Actual capital outlays during the year were requested, not the final value of equipment put in place or structures completed during the year.

The Census Bureau estimates of capital expenditures tend to be lower than those published in the joint Office of Business Economics-Securities and Exchange Commission survey. In addition to normal sampling variation, a major source of difference is to be found in the scope of the two series. Census data relate only to manufacturing establishments, whereas the OBE-SEC series covers all establishments of manufacturing companies—nonmanufacturing as well as manufacturing. This factor is particularly important in the petroleum industry where company expenditures for developing new wells and new distribution facilities are ordinarily much larger than their capital expenditures at refineries. On the other hand, manufacturing establishments of companies engaged primarily in nonmanufacturing activities are excluded from the OBE-SEC series but included in census figures. The OBE-SEC and census data for recent years are shown in tables M and N.

19. PLANT SPECIALIZATION

As discussed in section 4 above, the primary products of a plant are those which determine its industry classification; all other products are referred to as secondary products. The value of a plant's primary products in comparison to its total production is referred to as its degree of specialization. For each plant, two

TABLE L. 1957 Comparative Statistics on Value Added and National Income in Manufacturing

(Billions of dollars)

Item	Value added	National income[1]
Total	147.8	112.5
Payrolls	89.4	87.9
Payrolls of operating manufacturing establishments	76.4	
Supplements to wages in operating manufacturing establishments	6.0	[2]80.6

TABLE M. Expenditures for New Plant and Equipment–OBE–SEC Series and Census: 1967 and Earlier Years

(Billions of dollars)

Year	OBE–SEC series 1[1] (1)	Census (census of manufactures and ASM) (2)	Col. (2) divided by col. (1)
1967	26.7	[2]21.4	[2]0.80
1966	27.0	20.2	.75
1965	22.5	16.6	.74
1964	18.6	13.3	.72
1963	15.7	11.4	.73
1962	14.7	10.0	.68
1961	13.7	9.8	.72
1960	14.5	10.0	.69
1959	12.1	9.3	.77
1958	11.4	9.6	.84
1954	11.0	8.2	.74
1947	8.7	[3]6.0	.69

[1]Source: 1969 Business Statistics, Office of Business Economics, issued September 1969.
[2]Preliminary.
[3]Excludes data for establishments under construction but not yet in operation.

measures of specialization were computed: (1) A 4-digit primary product-specialization ratio, which is the sum of the values of all the plant's primary products divided by the sum of all its primary and secondary products; and (2) a 5-digit primary product-class specialization ratio, which is the sum of the largest 5-digit product-class value divided by the sum of its primary and secondary products (the miscellaneous receipts of the establishment were not included in these calculations). For example, assume that an establishment reported the following:

Total value of shipments and other receipts	$1,000
Miscellaneous receipts (resales, etc.)	15
Total value of products shipped	985
32721 Concrete pipe products	100
32722 Precast concrete products	785
32730 Ready-mixed concrete	100

This plant would be coded into SIC industry 3272, Concrete Products, with a primary product specialization ratio of 90 percent ($885÷985); it would be subclassified into the 5-digit class 32722, Precast Concrete, with a primary product class specialization ratio of 80 percent ($785÷985).

In the 1967 census, selected general statistics (number of establishments, employment, payrolls, value added, cost of materials, value of shipments, and capital expenditures) were tabulated to primary product-class levels by assigning the plant totals to the principal 5-digit codes. These data are presented in table 8 of the industry chapters, Volume II. For most product

classes, table 8 also provides general statistics for establishments specializing in the class to the extent of 75 percent or more.

Table 8 permits analysis of an industry in terms of the differences introduced by variation among establishments in the degree of specialization in the products of the industry or a subgroup (5-digit). For example, where the ratios among various statistics tend to be different for establishments specializing to different degrees in the products of the industry or in different product classes, the ratios for the industry as a whole would be significantly affected by changes in its product mix.

20. OPERATING RATIOS

Since all of the data collected in the census on establishment reports are interrelated, comparisons of the various measures of activity are of considerable interest. Beginning with the 1963 census, several ratios have been routinely computed and presented in the industry chapters of Volume II. For 1967 and earlier years, the following nine ratios were published for each 4-digit industry:

Payroll per employee
Production workers as percent of total employment
Annual man-hours of production workers
Average hourly earnings of production workers
Cost of materials per dollar of shipments
Cost of materials and payrolls per dollar of shipments
Value added per employee
Payrolls as percent of value added
Value added per man-hour of production worker

21. SUBJECT REPORTS SHOWN IN VOLUME I, SUMMARY AND SUBJECT STATISTICS

Volume I includes 3 tables representing summaries of rearrangements of data appearing in the industry and area volumes, and 2 special reports presenting statistics which are not published elsewhere. The contents of Volume I are as follows:

Chapter 1. General Summary.—This chapter, which appears in other volumes as well as Volume I, provides summary tabulations of data presented in greater detail in other census tables.

Chapter 2. Size of Establishments.—This chapter provides a summary of the general statistics by size of establishment which appear in table 4 of the industry chapters, Volume II. Also included are data on central administrative offices and auxiliary establishments, classified by size.

Chapter 3. Type of Organization.—This report presents data for manufacturing establishments classified as to the legal form of ownership (corporate, individual proprietor, or partnership) and as to whether the owner was a multiunit or single-unit company.

Chapter 4. Manufacturers' Inventories.—These tables summarize the inventory data published in table 3 of the industry chapters, Volume II. A description of the statistics is given in appendix A.

Chapter 5. Expenditures for Plant and Equipment.—These tables summarize the expenditures data published in table 3 of the industry chapters, Volume II. A description of the data is given in appendix A and in section 18, "Capital Expenditures."

Chapter 6. Materials Consumed.—This chapter consists of a compilation of detailed statistics on consumption of materials, fuels, and electricity. These figures also appear in Volume II, Industry Statistics, as tables 7A and 7B.

Chapter 7. Water Use in Manufacturing.—This report presents the results of a survey of the 1968 consumption of water in establishments consuming 20 million gallons or more annually. A more detailed description of the report and definitions of the terms employed, is given in the introduction to chapter 7.

Chapter 8. Selected Metalworking Operations.—This report presents the results of an inquiry concerning employment in metalworking plants such as foundry, forge shop, die casting department, heat treating, etc. The number of establishments in which these facilities are operated is presented, as well as the number of production workers engaged.

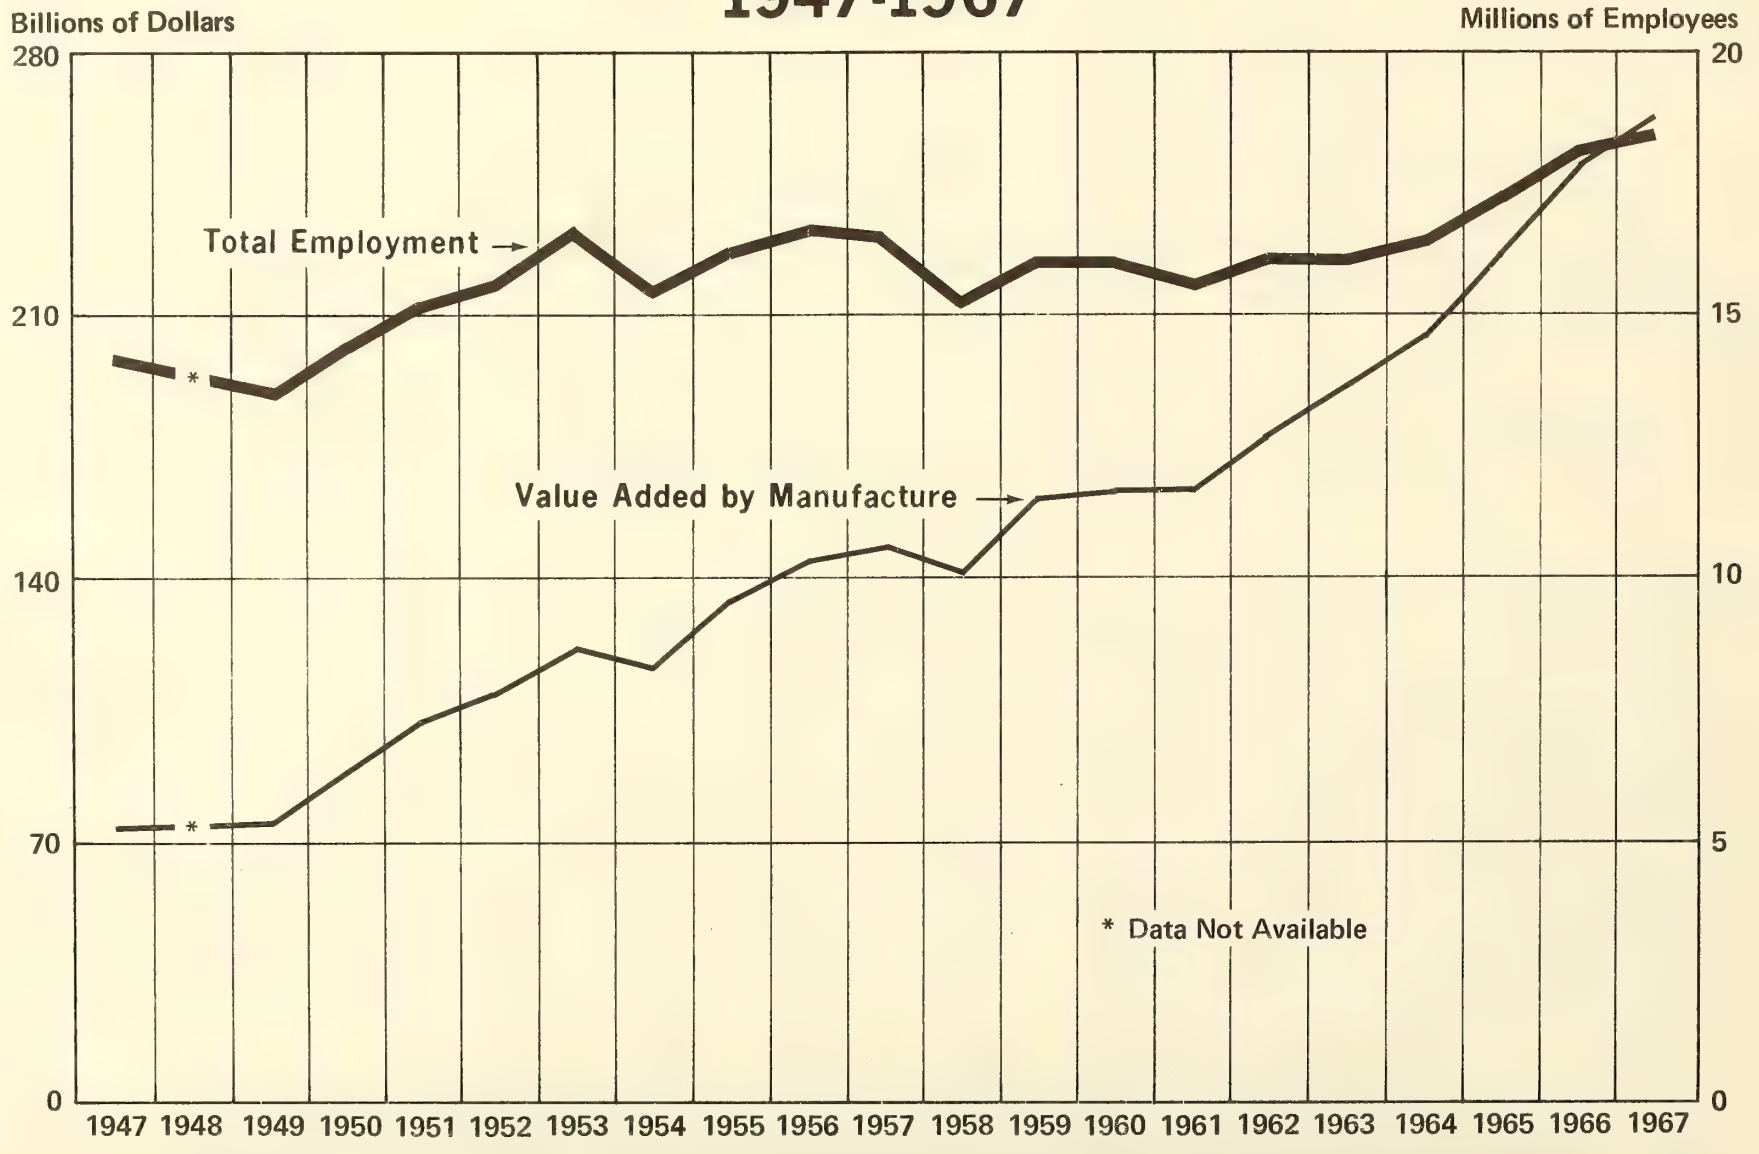
Chapter 9. Concentration Ratios.—This special report presents concentration ratios and other information on the share of industrial activity accounted for by the largest companies, both for the United States as a whole and for each of the 420 manufacturing industries. A more detailed description of the report, and explanations of the terms employed, is given in the introduction to chapter 9.

Chapter 10. Manufacturing Activity in Government Establishments.—This special report presents data on manufacturing activities in selected types of government establishments in the United States. The statistics are not included in other census of manufactures tables, which cover only privately operated establishments. A more detailed description of the report is given in the introduction to chapter 10.

22. CONFIDENTIALITY

The Bureau of the Census is prohibited by law from publishing any statistics that disclose information reported by individual companies. In suppressing figures to avoid disclosing information of individual companies, geographic region and division totals are given precedence over individual States; States are given precedence over standard metropolitan statistical areas; standard metropolitan statistical areas over counties; and counties over cities. In tables showing industry detail, major industry group (2-digit) totals take preference over industry group (3-digit) totals which, in turn, take precedence over individual (4-digit) industries. Similarly, in product tables, 4-digit product groupings take precedence over 5-digit product classes and the latter over individual 7-digit products.

Such order of precedence was used because (1) it was considered preferable to show regional data for an industry, even at the cost of withholding data for another (usually the least significant) State in a region, rather than to show all publishable data for the individual States and group the disclosure States throughout the United States in an "all other" category as was done in the 1939 and earlier censuses; and (2) by giving preference to industry-group statistics over individual industries within each State, the extent to which individual States can be compared within the SIC industry classification framework is greatly increased.



23. ABBREVIATIONS

The following abbreviations and symbols occur frequently in text, tables, and footnotes:

—	Zero
X	Not applicable
NA	Not available
n.e.c.	Not elsewhere classified
n.s.k.	Not specified by kind
lin.	Linear
equiv.	Equivalent
hp	Horsepower
kw.-hrs.	Kilowatt-hours
D	Withheld to avoid disclosing figures for individual companies
SIC	Standard Industrial Classification
IRS	Internal Revenue Service
SSA	Social Security Administration
ASM	Annual Survey of Manufactures
CIR	Current Industrial Reports
OBE	Office of Business Economics
SEC	Securities and Exchange Commission

Other abbreviations, such as lb., gal., yd., doz., and bbl., are used in the customary sense. Where the term "tons" only is used, it refers to short tons of 2,000 pounds; where the figures are expressed in tons of 2,240 pounds, the unit of measure is specified as "long tons" or "gross tons."

Value Added by Manufacture and Total Employment: 1947-1967

U.S. Department of Commerce

Bureau of the Census

Fabricated Metal Products

34A Metal cans, cutlery, handtools, and general hardware

34B Heating apparatus (except electric) and plumbing fixtures

34C Fabricated structural metal products

34D Screw machine products, fasteners and washers; metal stampings; and metal services

34E Miscellaneous metal products

This major group includes establishments primarily engaged in manufacturing a wide variety of fabricated metal products. Other important segments of the metal fabricating industries are classified in other major groups such as machinery, in Major Groups 35 and 36, transportation equipment in Major Group 37, instruments and related products in Major Group 38, jewelry and silverware in Major Group 39, and metal furniture and fixtures in Major Group 25.

The industries included in this major group encompass a varied group of fabricated metal finished products (cutlery, hardware, oil burners, plumbing fixtures, metal doors, safes, etc.), materials or components for incorporation into other products (sheet metal work, steel springs, bolts and nuts, etc.), containers (metal cans, metal shipping barrels and drums, and collapsible tubes), and service operations performed on a job or order basis for the trade (for example, galvanizing, coating, and engraving).

The products of Major Group 34 are used by establishments in other manufacturing industries--in construction, mines, farms, transportation, commerce, and in households. The basic metals consumed are generally produced by establishments in Major Group 33, Primary Metal Industries.

TABLE 1. General Statistics: 1967 and Earlier Years

(See Appendix, Explanation of Terms)

Year and item	Establishments		All employees [1]		Production workers			Value added by manufacture [2]	Cost of materials [3]	Value of shipments [3]	Capital expenditures, new [4]
	Total (number)	With 20 employees or more (number)	Total (1,000)	Payroll (million dollars)	Total (1,000)	Man-hours (millions)	Wages (million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)
ALL MANUFACTURING ESTABLISHMENTS, TOTAL:											
1967	27 737	11 043	1 375.1	9 670.0	1 056.9	2 160.9	6 541.6	18 042.6	16 704.9	34 577.8	1 118.4

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.

[1] The figures for 1939 through 1967 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

[2] For the period 1954 to 1967, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. See Introduction, "Value Added by Manufacture."

[3] The total value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same classification. For a more complete explanation, see Introduction.

[4] The figures for 1958 to 1967 include expenditures for plants under construction and not yet in operation.

[5] In addition to data for operating establishments, figures for employment and payroll for manufacturing central administrative office and auxiliary units are shown for the years 1949 to 1953 in the annual survey of manufactures volumes. Data for these years are not available for the years 1955 to 1957, 1959 to 1962, 1964 to 1966, and prior to 1949.

[6] These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

[7] The figures for 1939 to 1967 are not entirely comparable with those for 1937 because the 1937 figures exclude data for establishments primarily engaged in producing lawn sprinklers, spun ware, nonferrous metal novelties, tackle blocks, aluminum ornamental work, aluminum stampings, and machine knives (except metalworking) and include data for establishments primarily engaged in making caulking guns, toilet seats, brooders, cast aluminum cooking ware, and hair clippers. Value added for 1939 on a basis strictly comparable with 1937 was $1,340.4 million.

[8] The figures for 1935 and earlier years are not sufficiently comparable with those for 1937 to 1967 to be shown in this table principally because of the inclusion in earlier years of data for establishments primarily engaged in the manufacture of valves and fittings, except plumbers' and the exclusion of data for establishments primarily engaged in the manufacture of stamped, pressed, and spun aluminum ware.

TABLE 2. General Statistics, by Geographic Areas: 1967 and 1963

(See Appendix, Explanation of Terms)

Code	Industry and geographic area[1]	1967											1963	
		Establishments		All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials[2] (million dollars)	Value of shipments[3] (million dollars)	Capital expenditures, new (million dollars)	All employees (1,000)	Value added by manufacture (million dollars)
		Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under 50 thousand (or under 50 employees).

[1]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

METAL CANS, CUTLERY, HANDTOOLS, AND GENERAL HARDWARE

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3411--Metal Cans
3421--Cutlery
3423--Hand and Edge Tools, Except Machine Tools and Handsaws
3425--Handsaws and Saw Blades
3429--Hardware, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3411--METAL CANS

This industry comprises establishments primarily engaged in manufacturing metal cans from purchased materials. For a detailed list of products of industry 3411, refer to table 6A, product codes 3411010 to 3411091.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Metal Cans Industry in 1967 totaled $2,891 million. This included shipments of metal cans (primary products), valued at $2,534 million, shipments of other products (secondary products) valued at $276 million, and miscellaneous receipts (mainly resales) of $80 million.

This industry's shipments of metal cans (primary products) in 1967 represented 90 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 97 percent.

Industry 3411 shipments of metal cans (primary products) in 1967 represented 98 percent (coverage ratio) of these products valued at $2,586 million shipped by all industries. In 1963, the coverage ratio was also 98 percent.

Detailed figures on the shipments of metal cans are collected on a monthly basis by the Bureau of the Census of Form M34D. Table 6A-1 shows totals for the data collected in the monthly survey and in the census of manufactures for the same period. The differences are due to minor revisions in the reports for some companies. Both the

census of manufactures data for industry 3411 and the monthly survey include data for "captive" production, that is, the production of cans for use by the producing company. Most of these "captive" establishments are part of food, petroleum, and paint companies. Detailed data by product packed and metal are shown in table 6A-2.

The monthly survey data are reported in terms of base boxes of metal consumed in the manufacture of cans. Also reported separately are the base boxes of steel (tinplate) and aluminum consumed in the manufacture of cans. For 1967 the base boxes of steel (tinplate) have been converted to short tons by use of the factor 24.5 base boxes per short ton of steel. The comparable factor for 1963 is 23.5 base boxes per short ton of steel.

The weight of aluminum consumed in producing metal cans was reported separately and totaled 173.8 thousand short tons in 1967. In 1963 the tonnage equivalent was 43.3 thousand short tons.

Certain of the larger companies operating establishments classified in industry 3411 also have establishments producing other types of metal containers as well as containers made of other materials and which are classified in other industries; for example: steel shipping barrels, drums, and pails in industry 3491, Metal Barrels, Drums, and Pails; paper and paperboard boxes, drums, etc., in Major Group 26, Paper and Allied Products.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3411, these establishments accounted for approximately less than 1 percent of payroll and value added by manufacture.

3421--CUTLERY

This industry comprises establishments primarily engaged in manufacturing cutlery. Establishments primarily engaged in manufacturing table cutlery made entirely of metal are classified in industry 3914; those manufacturing electric razors in industry 3634; and those manufacturing hair clippers for human use in industry 3999, and for animal use in industry 3522. For a detailed list of products of industry 3421, refer to table 6A, product codes 3421111 to 3421255.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Cutlery Industry in 1967 totaled $379 million. This included shipments of cutlery (primary products), valued at $294 million, shipments of other products (secondary products) valued at $77 million, and miscellanous receipts (mainly resales) of $8 million.

This industry's shipments of cutlery (primary products) in 1967 represented 79 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 89 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 66 percent of the total industry shipments are represented by plants specializing in product class 34212, Razor blades and razors, except electric; and 31 percent in 34211, Cutlery, scissors, shears, trimmers, and snips.

Industry 3421 shipments of cutlery (primary products) in 1967 represented 95 percent (coverage ratio) of these products valued at $309 million shipped by all industries. In 1963, the coverage ratio was 97 percent. Other industries shipping cutlery (primary products) included industry 3423, Hand and Edge Tools, N.E.C., $7 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3421, these establishments accounted for approximately less than 1 percent of payroll and value added by manufacture.

3423--HAND AND EDGE TOOLS, EXCEPT MACHINE TOOLS AND HANDSAWS

This industry comprises establishments primarily engaged in manufacturing files and other hand and edge tools for metalworking, woodworking, and general maintenance. Establishments primarily engaged in manufacturing saws are classified in industry 3425, and metal-cutting dies, power-driven handtools, and attachments and accessories for machine tools in Major Group 35. For a detailed list of products of industry 3423, refer to table 6A, product codes 3423111 to 3423398.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Hand and Edge Tools, N.E.C., Industry in 1967 totaled $814 million. This included shipments of hand and edge tools, n.e.c. (primary products), valued at $661 million, shipments of other products (secondary products) valued at $51 million, and miscellaneous receipts (mainly resales) of $101 million.

This industry's shipments of hand and edge tools, n.e.c. (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 87 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 54 percent of the total industry shipments are represented by plants specializing in product class 34231, Mechanics' hand service tools; and 26 percent in 34233, Files, rasps, file accessories, and other handtools.

Industry 3423 shipments of hand and edge tools, n.e.c. (primary products) in 1967 represented 85 percent (coverage ratio) of these products valued at $775 million shipped by all industries. In 1963, the coverage ratio was 84 percent. Other industries shipping hand and edge tools, n.e.c. (primary products) included industry 3425, Handsaws and Saw Blades, $17 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3423, these establishments accounted for approximately 1 percent of payroll and value added by manufacture.

3425--HANDSAWS AND SAW BLADES

This industry comprises establishments primarily engaged in manufacturing handsaws and saw blades for hand and power-driven saws. Establishments primarily engaged

in manufacturing power-driven sawing machines are classified in Major Group 35. For a detailed list of products of industry 3425, refer to table 6A, product codes 3425011 to 3425049.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Handsaws and Saw Blades Industry in 1967 totaled $154 million. This included shipments of handsaws and saw blades (primary products), valued at $113 million, shipments of other products (secondary products) valued at $29 million, and miscellaneous receipts of $13 million.

This industry's shipments of handsaws and saw blades (primary products) in 1967 represented 80 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 78 percent. Secondary products shipped by this industry in 1967 consisted mainly of hand and edge tools, n.e.c. (SIC 3423) ($17 million).

Industry 3425 shipments of handsaws and saw blades (primary products) in 1967 represented 82 percent (coverage ratio) of these products valued at $138 million shipped by all industries. In 1963, the coverage ratio was 85 percent. Other industries shipping handsaws and saw blades, n.e.c. (primary products) included industry 3548, Metalworking Machinery, N.E.C., $11 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3425, these establishments accounted for approximately 1 percent of payroll and value added by manufacture.

3429--HARDWARE, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing miscellaneous metal products usually termed "handware," not elsewhere classified. Establishments primarily engaged in manufacturing bolts and nuts are classified in industry 3452, nails, and spikes in Major Group 33, cutlery in industry 3421, handtools in industry 3423, and pole line and transmission hardware in Major Group 36. For a detailed list of products of industry 3429, refer to table 6A, product codes 3429111 to 3429598.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Hardware, N.E.C., Industry in 1967 totaled $2,368 million. This included shipments of hardware, n.e.c. (primary products), valued at $2,074 million, shipments of other products (secondary products) valued at $202 million, and miscellaneous receipts (mainly resales) of $92 million.

This industry's shipments of hardware, n.e.c. (primary products) in 1967 represented 91 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 91 percent. Secondary products shipped by this industry in 1967 included special dies, tools, jigs, and fixtures ($74 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8.

Approximately 47 percent of the total industry shipments are represented by plants specializing in product class 34291, Transportation equipment hardware; and 27 percent in 34294, Builders' hardware.

Industry 3429 shipments of hardware, n.e.c. (primary products) in 1967 represented 95 percent (coverage ratio) of these products valued at $2,188 million shipped by all industries. In 1963, the coverage ratio was 93 percent. Other industries shipping hardware, n.e.c. (primary products) included industry 3461, Metal Stampings, $13 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3429, these establishments accounted for less than 1 percent of payroll and value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio
	Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(percent)	(percent)

Note: In 1967, 1963, and 1958, the number of companies in industry 3411 was 96, 99, and 82, respectively; in industry 3421: 138, 156, and 178; industry 3423: 630, 681, and 731; industry 3425: 74, 70, and 82; industry 3429: 979, 1,025, and 1,022. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [6]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under 50 thousand (or under 50 employees).

[1]The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

[2]The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

TABLE 4. General Statistics, by Employment Size of Establishment: 1967

(See Appendix, Explanation of Terms)

Item	Establishments (number)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Man-hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)	End-of-year inventories (million dollars)
3411-- METAL CANS

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)
		A	B	C	D	E	F	G	H	I
3411	Metal cans.....1967..	2,890.6	2,533.9	276.4	80.3	90	2,585.7	2,533.9	51.8	98

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Product code	Class of products, industry, and miscellaneous receipts	All industries	Metal cans (SIC 3411)	Cutlery (SIC 3421)	Hand and edge tools, n.e.c. (SIC 3423)	Handsaws and saw blades (SIC 3425)	Hardware, n.e.c. (SIC 3429)	Other industries

34295 22	Casters and wheels, for dollies and industrial handtrucks	56.9	41.8
34295 32	Trunk and luggage hardware, including locks	20.7	15.0
34295 52	Fireplace fixtures and equipment, including andirons, screens, tongs and other fire tools	16.7	16.4
34295 62	Hose fittings and couplings	104.1	63.1
34295 65	Refrigerator and stove hardware	17.0	21.6
34295 98	Other hardware, including saddlery and harness hardware, but excluding drapery hardware	87.5	61.5
34295 00	Other hardware, n.s.k.	18.8	4.4
34290 00	Hardware, n.e.c., n.s.k. (For companies with 10 or more employees. See Note.)	80.9	38.1
34290 02	Hardware, n.e.c., n.s.k. (For companies with less than 10 employees. See Note.)	16.3	

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated.

[1]A base box is an area of 31,360 square inches, equivalent to 112 sheets, 14" x 20" in size.

[2]A metal can is defined as a single-walled container constructed wholly of tinplate, terneplate, blackplate, waste plate, aluminum sheet or impact extrusions (slugs) designed for packing products. This definition excludes steel pails, defined as single-walled shipping containers having capacaties of 1-12 gallons inclusive that are cylindrically constructed of steel sheet of 29 gauge and heavier.

[3]The 1967 and 1963 figures represent, respectively, 5,149 and 4,621 thousand short tons of steel. The 1967 and 1963 estimates are derived, respectfully, by use of the factors 24.5 and 23.5 base boxes per short ton of steel. See table 6A-2 for detailed data on a product packed basis.

[4]The 1967 and 1963 figures represent, respectively, 17.8 and 43.3 thousand short tons of aluminum. See table 6A-2 for detailed data on a product packed basis.

[5]Quantities shipped are 20,411 and 20,140 thousand units for 1967 and 1963 respectively.

[6]Combined with product class 34233 98, Other handtools, except edge tools, to avoid disclosing figures for individual companies.

[7]Includes all types and sizes of solid tooth circular saw blades for industrial and home workshop type circular saws as well as saw blades for portable power saws and for sawing attachments for portable handtools.

[8]Included with product code 3425019, All other woodworking powersaw blades, to avoid disclosing operations of individual companies.

[9]Includes only the value of motor vehicle hardware reported as such. It is likely that an indeterminate amount of motor vehicle hardware was reported as motor vehicle parts and classified accordingly in the Motor Vehicle and Parts Industry.

[10]For 1963, product codes 34294 33 and 34294 65 were included with product codes 34294 98.

TABLE 6A-2 Shipments of Metal Cans, By Product Packed and Metal: 1967 and 1963

(Thousands of base boxes[1] of metal consumed in the manufacture of steel (tinplate) and aluminum cans)

Source: Current Industrial Reports Series M34D, Metal Cans.

Note: Detail may not add to total due to independent rounding.

- Represents zero. (Z) Less than 500 base boxes.

[1]A base box is an area of 31,360 square inches, equivalent of 112 sheets, 14" x 20" in size.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments

California	35.0	25.6

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

TABLE 6C. Product Classes–Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

(In millions of dollars)

Code	Product class	1967	1966[1]	1965[1]	1964[1]	1963	1958	1954	1947

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2]Data for Alaska and Hawaii are excluded.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

(See Appendix, Explanation of Terms)

Code	Material	Unit of measure	1967		1963

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963—Continued

(See Appendix, Explanation of Terms)

Code	Material	Unit of measure	1967		1963	
			Quantity	Delivered cost (million dollars)	Quantity	Delivered cost (million dollars)
	INDUSTRY 3429.--HARDWARE, N.E.C.					
	Materials, parts, containers, and supplies, total	.....	(X)	855.9	(X)	654.0
	Mill shapes and forms (except castings):					
	Carbon steel:					
331011	Bars and bar shapes	1,000 short tons.	103.1	19.2	89.4	16.4
331012	Sheet and strip	...do.....	746.1	124.5	635.2	111.3
331013	Plates	...do.....	[3]	[3]	3.9	0.6
331017	Wire and wire products	...do.....	101.0	20.8	91.3	19.7
331019	All other carbon steel mill shapes and forms	...do.....	[9] [3]48.4	[9] [3]12.5	14.7	4.9
331020	Alloy steel (except stainless)	...do.....	7.6	2.9	3.6	1.6
331031	Stainless steel	...do.....	43.1	42.7	37.9	37.3
	Copper and copper-base alloy:					
335728	Bare wire (for electrical conduction only)	Million lbs.....	2.4	1.8	[6]	[6]
335102	Rod, bar, and mechanical wire, including extruded and/or drawn shapes	...do.....	26.2	12.8	22.8	10.7
335123	Plate, sheet, and strip, including military cups and discs	...do.....	30.1	18.3	30.8	17.6
335127	Pipe and tube	...do.....	[6]	[6]	2.0	1.6
	Aluminum and aluminum-base alloy:					
335202	Sheet, plate and foil	...do.....	29.4	13.0	25.1	11.3
335205	Extruded shapes	...do.....	18.2	8.7	16.3	7.8
335209	All other aluminum mill shapes and forms	...do.....	2.7	1.4	8.4	4.4
	Primary metals:					
333122	Copper and copper-base alloy refinery shapes	1,000 short tons.	8.9	7.7	7.4	4.8
333348	Zinc and zinc-base alloy refinery shapes	...do.....	127.2	39.5	119.7	33.8
333401	Aluminum and aluminum-base alloy refinery shapes	...do.....	3.9	1.9	4.4	2.4
339915	Metal powders	Million lbs.....	[6]	[6]	(NA)	(NA)
	Castings (rough and semifinished):[10]					
332011	Iron (gray and malleable)	1,000 short tons.	55.1	24.6	58.9	20.4
332300	Steel	...do.....	8.3	5.1	4.2	2.3
336100	Aluminum and aluminum-base alloy	Million lbs.....	6.8	4.9	5.3	3.4
336200	Copper and copper-base alloy	...do.....	11.3	9.6	(NA)	5.6
970099	All other materials and components, parts, containers, and supplies consumed	.....	(X)	383.4	(X)	291.8
976000	Materials, parts, containers, and supplies, n.s.k[2]	.....	(X)	100.6	(X)	44.1

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated.

[1]Data on the tonnage of tinplate, terneplate, blackplate and aluminum consumed in the production of cans constructed wholly of metal are published in Current Industrial Reports Series M34D, Metal Cans. The consumption total reported in the census of manufactures also includes such metal consumed in the production of secondary products.

[2]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967 this includes estimates for companies that were not mailed report forms.

[3]Material code 331013, carbon steelplate is combined with material code 331019, all other carbon steel mill shapes and forms.

[4]Does not include castings or forgings produced and consumed in the same establishment.

[5]These figures are understated by $2 million or less because of apparent undercoverage of carbon steel pipe and tube.

[6]Included with material code 970099, All other materials and components, etc.

[7]No data are available for castings produced and consumed in the same establishment.

[8]In 1967, 6.2 thousand short tons of iron and steel forgings were produced and consumed in the same establishment. The comparable figure for 1963 is 3.8 thousand short tons.

[9]These figures are understated by $5 million or less because of apparent undercoverage of carbon steel pipe and tube.

[10]In addition there were 3.5 and 2.7 thousand short tons of iron castings produced and consumed in the same establishment for 1967 and 1963 respectively. In 1963, 2.2 million pounds of aluminum castings were produced and consumed. Data on aluminum, steel, and copper castings produced and consumed for 1967 are not available. Also, no data are available for quantities of steel and copper castings produced and consumed in the same establishment in 1963.

TABLE 7B. Fuels and Electric Energy Consumed: 1967

(See Appendix, Explanation of Terms)

Code	Item	Unit of measure	Metal cans (SIC 3411)	Hand and edge tools, n.e.c. (SIC 3423)	Hardware, n.e.c. (SIC 3429)
	Cost of purchased fuels and electric energy, total....	Million dollars.	20.0	8.7	22.0
	Cost of purchased fuels, total.....	...do.....	9.1	4.3	8.7
121005	Coal (anthracite, bituminous, and lignite):				
	Quantity.....	1,000 short tons	56.2	54.2	210.0
	Cost.....	Million dollars.	0.5	0.3	1.9

	Fuels, n.s.k.....	...do.....	0.2	0.6	1.3
	Purchased electric energy:				
	Quantity.....	Million kw.-hrs.	994.6	268.8	1,093.0
	Cost.....	Million dollars.	10.9	4.4	13.4
	Quantity of electric energy generated less quantity sold.....	Million kw.-hrs.	0.8	-	-
	Total energy used for heat and power[1].....	Million kw.-hrs. equivalent.....	5,757.9	2,146.9	5,429.0

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments	All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new
			Number	Payroll	Number	Man-hours	Wages				
		(number)	(1,000)	(million dollars)	(1,000)	(millions)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)
3421	CUTLERY

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 9. Establishments and Production Workers for Selected Metalworking Operations: 1967

(To be published in a separate subject chapter titled "Selected Metalworking Operations.")

HEATING APPARATUS (EXCEPT ELECTRIC) AND PLUMBING FIXTURES

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3431--Enameled Iron and Metal Sanitary Ware
3432--Plumbing Fixture Fittings and Trim (Brass Goods)
3433--Heating Equipment, Except Electric

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3431--ENAMELED IRON AND METAL SANITARY WARE

This industry comprises establishments primarily engaged in manufacturing enameled iron, cast iron, or pressed metal sanitary ware. Establishments primarily engaged in manufacturing vitreous and semivitreous pottery sanitary ware are classified in industry 3261; and those manufacturing porcelain enameled kitchen, household, and hospital ware in industry 3461. For a detailed list of products of industry 3431, refer to table 6A, product codes 3431010 to 3431098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Metal Sanitary Ware Industry in 1967 totaled $251 million. This included shipments of metal plumbing fixtures (primary products), valued at $189 million, shipments of other products (secondary products) valued at $37 million, and miscellaneous receipts (mainly resales of products bought and resold without further manufacture) of $25 million.

This industry's shipments of metal plumbing fixtures (primary products) in 1967 represented 83 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 84 percent. Secondary products shipped by this industry in 1967 consisted mainly of plumbing fittings and brass goods ($20 million).

Industry 3431 shipments of metal plumbing fixtures (primary products) in 1967 represented 89 percent (coverage ratio) of these products valued at $213 million shipped by all industries. In 1963, the coverage ratio was 91 percent. Other industries shipping metal plumbing fixtures (primary products) included industry 3461, metal stampings, $9 million.

Industry 3431 includes establishments which fall into two significantly different categories, namely those producing cast iron plumbing fixtures and those producing metal fixtures of pressed metal. Accordingly, the manufacturing plants included in this industry involve different manufacturing processes depending upon the line of products produced. Those fixture plants producing cast iron fixtures include significant foundry operations while the pressed metal fixture plants are more closely allied to metal fabricating plants producing their product by forming processes (stamping, drawing, etc.).

The operations of the largest establishments in this industry cover the entire production process including the casting of the fixture, through the machining, finishing, and assembly operations. In general these processes are carried on at a single manufacturing plant. However, in a few instances the foundry operations were performed at separate locations and, accordingly, those separate foundries were classified in the foundry industries (SIC industries 3321, 3322, 3323, 3361, 3362 and 3369). In the latter case the plants classified in this industry would be limited to machining and finishing operations on castings received from their associated plants.

Certain of the companies operating plants classified in this industry also have establishments producing allied products classified in other industries. For example, the larger fixture manufacturers also have plants engaged in manufacturing fixture fittings and such allied products as vitreous china fixtures, kitchen cabinets, warm air furnaces, boilers and other consumer durable items in the plumbing and heating line.

As is shown in table 7A, certain of the more important materials consumed by the industry are pig iron, and iron and steel scrap metal consumed in the foundry operations and steel mill shapes and forms.

Data on shipments of plumbing fixtures were collected by the Bureau of the Census on a quarterly basis on Form MQ-34E. The detailed statistics shown in table 6A were taken from the quarterly survey.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3431, these establishments accounted for less than 1 percent of payroll and value added by manufacture.

3432--PLUMBING FIXTURE FITTINGS AND TRIM (BRASS GOODS)

This industry comprises establishments primarily engaged in manufacturing plumbing fixture fittings and trim (brass goods). Establishments primarily engaged in the manufacture of steam or water line valves are classified in industry 3494. For a detailed list of products of industry 3432, refer to table 6A, product codes 3432001 to 3432098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Plumbing Fittings and Brass Goods Industry in 1967 totaled $405 million. This included shipments of plumbing fittings and brass goods (primary products), valued at $347 million, shipments of other products (secondary products) valued at $28 million, and miscellaneous receipts (mainly resales of products bought and resold without further manufacture) of $30 million.

This industry's shipments of plumbing fittings and brass goods (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 90 percent.

Industry 3432 shipments of plumbing fittings and brass goods (primary products) in 1967 represented 86 percent (coverage ratio) of these products valued at $405 million shipped by all industries. In 1963, the coverage ratio was 83 percent. Other industries shipping plumbing fittings and brass goods (primary products) included industry 3431, metal plumbing fixtures, $20 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3432, these establishments accounted for 1 percent of payroll and value added by manufacture.

3433--HEATING EQUIPMENT, EXCEPT ELECTRIC

This industry comprises establishments primarily engaged in manufacturing heating equipment for all purposes other than power, including all gas, oil, and stoker coal fired equipment for the automatic utilization of gaseous, liquid, and solid fuels. Establishments primarily engaged in manufacturing cooking stoves and ranges are classified in industry 3631; boilershops primarily engaged in the production of industrial, power, and marine boilers in industry 3443; and industrial process furnaces and ovens in industry 3567. For a detailed list of products of industry 3433, refer to table 6A, product codes 343110 to 3433698.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Heating Equipment, Except Electric, Industry in 1967 totaled $1,069 million. This included shipments of heating equipment, except electric (primary products), valued at $760 million, shipments of other products (secondary products) valued at $230 million, and miscellaneous receipts (mainly resales of products bought and resold without further manufacture) of $79 million.

This industry's shipments of heating equipment, except electric (primary products) in 1967 represented 77 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 76 percent. Secondary products shipped by this industry in 1967 consisted largely of refrigeration machinery ($104 million).

Industry 3433 shipments of heating equipment, except electric (primary products) in 1967 represented 80 percent (coverage ratio) of these products valued at $955 million shipped by all industries. In 1963, the coverage ratio was 81 percent. Other industries shipping heating equipment, except electric (primary products) consisted mainly of industry 3485, Refrigeration Machinery $94 million; and industry 3443, Fabricated Platework (boilershop products), $22 million.

Inasmuch as the primary products of Industry 3433 represent a wide and heterogenous group of heating equipment products, the establishments in this industry are involved in a variety of manufacturing processes. Many heating equipment plants are engaged in metal fabricating activities, namely, stamping and forming. In addition, a significant number of the establishments in the industry are engaged in foundry and plate fabricating activities.

Some of the companies operating plants classified in industry 3433 have establishments engaged in the production of allied products such as metal tanks, electric and nonelectric ranges, electric and nonelectric water heaters and other consumer durable items principally in the heating and cooking line.

The establishments of this industry vary greatly in the degree to which they manufacture the components used in the production of heating and cooking equipment. Some manufacturers produce practically all of the component parts and incorporate only such purchased parts as the motor, electrical controls, and blowers. Other manufacturers produce only a small part of the complete unit purchasing most of the components from other manufacturers and limiting their manufacturing activities to assembly operations.

Data are shown in table 6A for "oil burners sold separately." These statistics exclude the quantity and value of oil burners which were both produced and incorporated into other types of heating equipment in the same plant. In these instances the value of the boiler- or furnace-burner unit includes the value of the oil burner.

Data on shipments of domestic heating stoves, mechanical stokers, oil burners, and furnaces were collected during 1967 by the Bureau of the Census on Annual Form MA-34N, Heating and Cooking Equipment (Except Electric). The product data shown in table 6A are from that source.

Data for unit ventilators, unit heaters, and parts for unit heaters and ventilators, and heat transfer coils were collected during 1967 by the Bureau of the Census on an annual basis on Form MA-35H, Fans and Blowers. The product data shown in table 6A were taken from the annual survey.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3433, these establishments accounted for 1 percent of payroll and value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio

Note: In 1967, 1963, and 1958, the number of companies in industry 3431 was 83, 75, and 56, respectively; in industry 3432: 210, 247, and 250; industry 3433: 496, 611, 642. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [6]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)
		A	B	C	D	E	F	G	H	I
3431	Metal sanitary ware.....1967..	251.2	189.2	36.8	25.2	83	213.1	189.2	23.9	89
	1963..	234.9	184.2	34.3	16.3	84	203.3	184.2	19.3	91
3432	Plumbing fittings and brass goods.....1967..	404.7	346.7	27.9	30.1	93	404.6	346.7	57.9	86
	1963..	333.8	274.1	30.7	29.0	90	329.6	274.1	55.4	83

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [r]Revised.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Product code	Class of products, industry, and miscellaneous receipts	All industries	Metal sanitary ware (SIC 3431)	Plumbing fittings and brass goods (SIC 3432)	Heating equipment, except electric (SIC 3433)	Other industries
	Total shipments and miscellaneous receipts	(X)	251.2	404.7	1,069.0	(X)
3431-	Metal plumbing fixtures	213.1	189.2	0.6	-	23.3
3432-	Plumbing fittings and brass goods	404.6	19.5	346.7	-	38.4
3433-	Heating equipment, except electric	954.6	-	-	759.7	194.9
34331	Oil burners, residential and industrial (sold separately), except parts	35.2	-	-	33.2	2.0
34332	Warm air furnaces (except floor and wall) and parts	215.5	-	-	136.0	79.5
34333	Cast iron heating boilers, radiators and convectors, except parts	133.3	-	-	132.0	1.4
34334	Domestic heating stoves (except electric), excluding parts	50.1	-	-	39.5	10.6
34335	Steel heating boilers (15 p.s.i. and under), except parts	67.0	-	-	42.9	24.1
34336	Other heating equipment, except electric, including parts for non-electric heating equipment	379.7	-	-	310.7	69.0
34330	Heating equipment, except electric, n.s.k.	73.6	-	-	65.4	8.3

See footnotes at end of table.

	Class 2 (capacity 61 to 100 pounds of coal per hour):					
34336 63	Bituminous	...do...	0.3	0.1	0.1	0.2
34336 64	Anthracite	...do...	(Z)	(Z)	0.1	(Z)

See footnotes at end of table.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Unit of measure	Total shipments including interplant transfers			
			1967		1963	
			Quantity	Value (million dollars)	Quantity	Value (million dollars)
3433- --	HEATING EQUIPMENT, EXCEPT ELECTRIC--Continued					
	Duct furnaces--Continued					
	Mechanical stokers--Continued					
34336 65	Class 3 (capacity 100 to 300 pounds of coal per hour)	...do...	0.3	0.2	0.3	0.4
34336 66	Class 4 (capacity 301 to 1,200 pounds of coal per hour)	...do...	0.1	0.2	0.3	0.4
	Class 5 (capacity 1,201 pounds of coal per hour and over):					
34336 67	Installed under fire-tube boilers	...do...	0.1	2.1	0.2	5.5
34336 68	Installed under water-tube boilers	...do...				
34336 59	Parts for unit heaters and unit ventilators (MA-35H)	...	(X)	1.3	(X)	2.0
34336 60	Unit ventilators (MA-35H)	...	52.0	26.4	(X)	26.0
34336 35	Heavy duty forced warm air type unit heaters (over 400,000 BTU/hr.)	...	(NA)	5.5	(NA)	2.7
34336 61	Tanks for water heaters (sold separately)	1,000 units...	([6])	([6])	250.4	5.4
	Parts and attachments for heating equipment (sold separately):					
34336 73	For warm air furnaces	...	(X)	10.9	(X)	17.6
34336 74	For cast iron and steel heating boilers	...	(X)	3.1	(X)	15.5
34336 83	For mechanical stokers	...	(X)	2.1	(X)	3.0
34336 85	For oil burners	...	(X)	11.2	(X)	14.6
34336 98	Other heating equipment, except electric (including incinerators, solar heaters, and circulating fireplace heaters) and other parts for heating equipment, except electric (sold separately)	...	(X)	124.6	(X)	60.4
34336 00	Other heating equipment, n.s.k.	...	(X)	13.8	(X)	16.9
34330 00	Heating equipment, n.s.k. (For establishments with 10 or more employees, See Note)	...	(X)	64.8	(X)	41.2
34330 02	Heating equipment, n.s.k. (For establishments with fewer than 10 employees, See Note.)	...	(X)	8.8		

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (X) Not applicable. (NA) Not available. n.s.k. Not specified by kind. (Z) Less than 50 thousand units.

[1]Differs from value of shipments of metal plumbing fixtures reported in the Census Quarterly Survey due to different methods of reporting values in the two surveys.

[2]This figure represents value of metal plumbing fixtures only. The detailed values do not add to this total because certain plumbing fixtures made of other materials such as vitreous china, concrete, etc. are included in the detail below.

[3]Commercial and industrial burners are those with consumption rates of 6 gallons per hour or more.

[4]Conversion stoker-a conversion stoker is a mechanical stoker which may be installed in any of the common types of furnaces or boilers.

[5]Integral unit-an integral unit consists of a boiler or furnace, an automatic coal feeding mechanism, accessories and usually a metal enclosure, the whole assembly having been designed as a complete, compact and coordinated heating unit.

[6]Included with product code 34336 98 "other heating equipment" etc. to avoid disclosing operations of individual companies.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments	
	1967	1963
OIL BURNERS, RESIDENTIAL, INDUSTRIAL (EXCLUDING PARTS) (34331)		
United States	35.2	42.0
Northeast Region	14.5	16.3

New York	19.2	17.5
New Jersey	14.8	12.3
Pennsylvania	63.9	38.2
OTHER HEATING EQUIPMENT AND PARTS, EXCLUDING ELECTRIC (34336)--Con.		
North Central Region	164.0	172.0
East North Central Div.	137.7	155.4
Ohio	49.0	53.5
Indiana	22.5	19.6
Illinois	36.0	44.2
Michigan	14.8	10.5
Wisconsin	15.5	27.7
West North Central Div.	26.3	16.6
Minnesota	5.8	4.6
Iowa	BB	(1)
Missouri	CC	2.6
Nebraska	CC	(1)
Kansas	8.4	5.8
South Region	72.5	35.0
South Atlantic Div.	10.7	5.5
Virginia	7.6	(D)
North Carolina	AA	(D)
East South Central Div.	49.6	16.3
Kentucky	32.7	(1)
Tennessee	15.8	11.8
Alabama	1.1	(1)
West South Central Div.	12.2	13.2
Arkansas	BB	(1)
Oklahoma	AA	(1)
Texas	5.7	5.6
West Region	39.0	30.7
Mountain Div.	CC	2.5
Utah	CC	2.0
Pacific Div.	FF	28.2
Washington	BB	(1)
California	29.7	26.3

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

TABLE 6C. Product Classes–Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

(In million of dollars)

Code	Product class	1967	1966[1]	1965[1]	1964[1]	1963	1958	1954	1947
34310	Metal plumbing fixtures	213.1	209.4	209.5	217.7	203.5	180.0	207.2	126.9
34320	Plumbing fixture fittings and trim (brass goods)	404.6	412.0	401.4	386.9	329.6	259.5	212.4	159.7
3433-	Heating equipment, except electric	954.6	952.8	940.1	908.7	893.2	837.0	772.5	(NA)
34331	Oil burners, residential, industrial (sold separately), except parts	35.2	48.5	52.7	47.5	42.0	46.6	54.8	108.6
34332	Warm air furnaces (except floor and wall), except parts	215.5	235.4	229.6	218.3	204.5	232.5	222.5	148.6
34333	Cast iron heating boilers, radiators and convectors, except parts	133.3	138.6	146.0	146.4	138.9	121.5	104.2	87.7
34334	Domestic heating stoves (except electric), except parts	50.1	69.0	56.8	59.6	79.1	69.8	70.1	146.3
34335	Steel heating boilers (15 p.s.i. and under), except parts	67.0	68.6	72.6	74.1	70.3	62.8	53.2	43.5
34336	Other heating equipment, except electric, including parts for nonelectric heating equipment	379.7	355.2	349.5	323.8	317.3	268.0	267.8	(NA)
34330	Heating equipment, except electric, n.s.k.	73.6	(37.5)	(33.0)	38.9	41.2	35.7	-	-

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

(See Appendix, Explanation of Terms)

Code	Material	Unit of measure	1967		1963

	Bearings:					
356218	Ball		(X)	(1)	(X)	0.5
356201	Roller		(X)	-		
970099	All other materials and components, parts, containers, and supplies		(X)	223.4	(X)	264.3
976000	Materials, components, parts, containers, and supplies consumed, n.s.k. [3]		(X)	83.5	(X)	57.3

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. e From 10 to 30 percent of this figure was estimated. (Z) Less than half the unit of measure specified.

[1] Included with material code 970099, "All other materials and components...." to avoid disclosing figures for individual companies.

[2] Data are not available for castings or forgings produced and consumed in the same establishment except for iron castings which totaled 182.0 thousand short tons in 1967 and 187.5 thousand short tons in 1963.

[3] This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967 this includes estimates for companies that were not mailed report forms.

[4] No data are available for castings or forgings produced and consumed in the same establishment.

[5] No data are available for castings or electric motors and generators produced and consumed in the same establishment.

TABLE 7B. Fuels and Electric Energy Consumed: 1967

(See Appendix, Explanation of Terms)

Code	Item	Unit of measure	Metal sanitary ware (SIC 3431)	Heating equipment, except electric (SIC 3433)
	Cost of purchased fuels and electric energy, total....	Million dollars.	6.2	9.4
	Cost of purchased fuels, total.....	...do.....	4.2	4.6
121005	Coal (anthracite, bituminous, and lignite):			
	Quantity.....	1,000 short tons	10.8	18.5
	Cost.....	Million dollars.	0.3	0.1
331212 331213	Coke, screenings, and breeze:			
	Quantity.....	1,000 short tons	34.9	20.9
	Cost.....	Million dollars.	1.1	0.8
	Fuel oil, total:			
	Quantity.....	1,000 barrels...	74.4	155.1
	Cost.....	Million dollars..	0.3	0.6
291141	Distillate:			
	Quantity.....	1,000 barrels...	(D)	86.8
	Cost.....	Million dollars.	(D)	0.4
291151	Residual:			
	Quantity.....	1,000 barrels...	(D)	68.3
	Cost.....	Million dollars.	(D)	0.2
131300 331217 331218 291104	Gas (natural, manufactured mixed, blast-furnace, coke-oven, and other gas):			
	Quantity.....	Million cu. ft..	4,538.2	2,594.6
	Cost.....	Million dollars.	2.2	1.6
291111 960011 960013 960017	Other fuels (gasoline, LPG, wood, etc.).....	...do.....	-	0.1
	Fuels, n.s.k.....	...do.....	0.3	1.4
	Purchased electric energy:			
	Quantity.....	Million kw.-hrs.	176.6	387.7
	Cost.....	Million dollars.	2.0	4.9
	Quantity of electric energy generated less quantity sold.....	Million kw.-hrs.	11.4	-
	Total energy used for heat and power[1].....	Million kw.-hrs. equivalent.....	2,198.2	2,392.7

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967-Continued

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Man-hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)
3431	METAL SANITARY WARE										
	ENTIRE INDUSTRY	91	10.1	71.3	8.1	16.4	53.5	140.6	109.3	251.2	7.6
	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION	76	6.3	43.5	5.0	9.9	32.9	90.8	71.0	163.6	2.5

	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION	98	9.0	59.2	6.2	12.5	34.4	119.1	89.9	209.6	4.8

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 9. Establishments and Production Workers for Selected Metalworking Operations: 1967

(To be published in a separate subject chapter titled "Selected Metalworking Operations."

FABRICATED STRUCTURAL METAL PRODUCTS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3441--Fabricated Structural Steel
3442--Metal Doors, Sash, Frames, Molding and Trim
3443--Fabricated Platework (Boiler Shops)
3444--Sheet Metalwork
3446--Architectural Metalwork
3449--Miscellaneous Metalwork

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3441--FABRICATED STRUCTURAL STEEL PRODUCTS

This industry comprises establishments primarily engaged in manufacturing fabricated iron and steel or other metal for structural purposes, for bridges, buildings; and sections for ships, boats, and barges. Establishments primarily engaged in manufacturing metal doors, sash, frames, molding, and trim are classified in industry 3442; and fabrication work done by construction contractors at the site of construction is classified in construction industries. For a detailed list of products of industry 3441, refer to table 6A, product codes 3441121 to 3441398.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Fabricated Structural Steel Industry in 1967 totaled $2,968 million. This included shipments of fabricated structural steel (primary products), valued at $2,325 million, shipments of other products (secondary products) valued at $302 million, and miscellaneous receipts (mainly resales of products bought and resold without further manufacture) of $341 million.

This industry's shipments of fabricated structural steel (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 86 percent. Secondary products shipped by this industry in 1967 consisted mainly of fabricated platework ($71 million), miscellaneous metalwork ($69 million), and sheet metalwork ($45 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 65 percent of the total industry shipments are represented by plants specializing in product class 34411, Fabricated structural metal for buildings.

Industry 3441 shipments of fabricated structural steel (primary products) in 1967 represented 91 percent (coverage ratio) of these products valued at $2,562 million shipped by all industries. In 1963, the coverage ratio was 89 percent. Other industries shipping fabricated structural steel (primary products) included industry 3731, Ship Building and Repairing, $41 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3441, these establishments accounted for less than 1 percent of payroll and value added by manufacture.

3442--METAL DOORS, SASH, FRAMES, MOLDING, AND TRIM

This industry comprises establishments primarily engaged in manufacturing ferrous and nonferrous metal and metal covered doors and sash, window and door frames and screens, molding and trim. For a detailed list of products of industry 3442, refer to table 6A, product codes 3442113 to 3442551.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Metal Doors, Sash, and Trim Industry in 1967 totaled $1,414 million. This included shipments of metal doors, sash, and trim (primary products), valued at $1,219 million, shipments of other products (secondary products) valued at $117 million, and miscellaneous receipts (mainly resales of products bought and resold without further manufacture) of $78 million.

This industry's shipments of metal doors, sash, and trim (primary products) in 1967 represented 91 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 88 percent. Secondary products shipped by this industry in 1967 included sheet metalwork ($30 million), and miscellaneous metalwork ($25 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 24 percent of the total industry shipments are represented by plants specializing in product class 34421, Metal doors and frames (except storm doors); and 22 percent in 34422, Metal window sash and frames (except storm sash).

Industry 3442 shipments of metal doors, sash, and trim (primary products) in 1967 represented 94 percent (coverage ratio) of these products valued at $1,302 million shipped by all industries. In 1963, the coverage ratio was also 94 percent. Other industries shipping metal doors, sash, and trim (primary products) included industry 2431, Millwork, $10 million; industry 3444, Sheet Metalwork, $9 million, and industry 3441, Fabricated Structural Metal, $9 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3442, these establishments accounted for approximately 2 percent of payroll and value added by manufacture.

3443--FABRICATED PLATEWORK (BOILER SHOPS)

This industry comprises establishments primarily engaged in manufacturing power and marine boilers, pressure and nonpressure tanks, processing and storage vessels, heat exchangers, weldments and similar products by the process of cutting, forming and joining metal plates, shapes, bars, sheet, pipe mill products and tubing to custom or standard design for factory or field assembly. Establishments primarily engaged in manufacturing nonelectric heating apparatus other than power boilers are classified in industry 3433, and household cooking apparatus in industry 3631. For a detailed list of products of industry 3443, refer to table 6A, product codes 3443111 to 3443959.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Fabricated Platework (Boiler Shops) Industry in 1967 totaled $2,689 million. This included shipments of fabricated platework (boiler shop products) (primary products), valued at $2,209 million, shipments of other products (secondary products) valued at $228 million, and miscellaneous receipts of $252 million.

This industry's shipments of fabricated platework (boiler shop products) (primary products) in 1967 represented 91 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 89 percent. Secondary products shipped by this industry in 1967 included fabricated structural steel ($28 million), sheet metalwork ($24 million), and heating equipment, except electric ($24 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 24 percent of the total industry shipments are represented by plants specializing in product class 34433, Steel power boilers, parts and attachments; and 19 percent 34438, Metal tanks and vessels, custom fabricated at the factory.

Industry 3443 shipments of fabricated platework (boiler shop products) (primary products) in 1967 represented 85 percent (coverage ratio) of these products valued at $2,589 million shipped by all industries. In 1963, the coverage ratio was 83 percent. Other industries shipping fabricated platework (boiler shop products) (primary products) included industry 3441, Fabricated Structural Metal, $71 million; industry 3585, Refrigeration Machinery, $22 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3443, these establishments accounted for less than 1 percent of payroll and value added by manufacture.

3444--SHEET METALWORK

This industry comprises establishments primarily engaged in manufacturing sheet metalwork for buildings (not including fabrication work done by construction contractors at the place of construction), and manufacturing sheet metal stovepipes, light tanks, etc. For a detailed list of products of industry 3444, refer to table 6A, product codes 3444105 to 3444398.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Sheet Metalwork Industry in 1967 totaled $1,812 million. This included shipments of sheet metalwork (primary products), valued at $1,402 million, shipments of other products (secondary products) valued at $194 million, and miscellaneous receipts (mainly products bought and resold without further manufacture) of $216 million.

This industry's shipments of sheet metalwork (primary products) in 1967 represented 88 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 88 percent. Secondary products shipped by this industry in 1967 consisted mainly of architectural metalwork ($35 million), miscellaneous metalwork ($29 million), and fabricated platework (boiler shop products) ($21 million).

Industry 3444 shipments of sheet metalwork (primary products) in 1967 represented 83 percent (coverage ratio) of these products valued at $1,687 million shipped by all industries. In 1963, the coverage ratio was 78 percent. Other industries shipping sheet metalwork (primary products) consisted mainly of industry 3441, Fabricated Structural Steel, $45 million; industry 3312, Blast Furnaces and Steel Mills, $40 million; industry 3442, Metal Doors, Sash, and Trim, $30 million; and industry 3352, Aluminum Rolling and Drawing, $29 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3444, these establishments accounted for approximately 4 percent of payroll and value added by manufacture.

3446--ARCHITECTURAL AND ORNAMENTAL METALWORK

This industry comprises establishments primarily engaged in manufacturing architectural and ornamental metalwork of ferrous and nonferrous metals, such as stairs and staircases, open steel flooring (grating), fire escapes, grilles, railings, and fences and gates, except those made from wire. Establishments primarily engaged in manufacturing prefabricated and portable metal buildings and parts, and miscellaneous metalwork, are classified in industry 3449. For a detailed list of products of industry 3446, refer to table 6A, product codes 3446011 to 3446061.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Architectural Metalwork Industry in 1967 totaled $485 million. This included shipments of architectural metalwork (primary products), valued at $390 million, shipments of other products (secondary products) valued at $77 million, and miscellaneous receipts of $18 million.

This industry's shipments of architectural metalwork (primary products) in 1967 represented 83 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 86 percent. Secondary products shipped by this industry in 1967 consisted mainly of fabricated structural steel ($28 million), and fabricated platework (boiler shops products) ($20 million).

Industry 3446 shipments of architectural metalwork (primary products) in 1967 represented 77 percent (coverage ratio) of these products valued at $505 million shipped by all industries. In 1963, the coverage ratio was 71 percent. Other industries shipping architectural metalwork (primary products) consisted mainly of industry 3444, Sheet Metalwork, $35 million; and industry 3441, Fabricated Structural Steel, $33 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3446, these establishments accounted for approximately 8 percent of payroll and 9 percent of value added by manufacture.

3449--MISCELLANEOUS METALWORK

This industry comprises establishments primarily engaged in manufacturing miscellaneous ferrous and nonferrous metalwork, such as prefabricated and portable metal buildings and parts, metal plaster bases, fabricated bar joists and concrete reinforcing bars, and prefabricated exterior metal panels. For a detailed list of products of industry 3449, refer to table 6A, product codes 3449211 to 3449379.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Miscellaneous Metalwork Industry in 1967 totaled $1,082 million. This included shipments of miscellaneous metalwork (primary products), valued at $859 million, shipments of other products (secondary products) valued at $112 million, and miscellaneous receipts (mainly products bought and resold without further manufacture) of $111 million.

This industry's shipments of miscellaneous metalwork (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 89 percent. Secondary products shipped by this industry in 1967 included fabricated structural steel ($32 million), and sheet metalwork ($21 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 51 percent of the total industry shipments are represented by plants specializing in product class 34493, Miscellaneous metal building material and curtain wall; 37 percent in 34492, Prefabricated and portable metal buildings and parts.

Industry 3449 shipments of miscellaneous metalwork (primary products) in 1967 represented 77 percent (coverage ratio) of these products valued at $1,117 million shipped by all industries. In 1963, the coverage ratio was 68 percent. Other industries shipping miscellaneous metalwork (primary products) consisted mainly of industry 3312, Blast Furnaces and Steel Mills, $103 million; and industry 3441, Fabricated Structural Steel, $69 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3449, these establishments accounted for approximately 2 percent of payroll and 4 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio
	Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(percent)	(percent)

1958 Census[2 4].	248	(NA)	21.2	113.8	14.8	30.4	68.4	220.1	371.4	594.7	9.4	(NA)	(NA)	(NA)

Note: In 1967, 1963, and 1958, the number of companies in industry 3441 was 1,865, 1,636, and 1,793, respectively; in industry 3442: 1,540, 1,712, and 1,468; industry 3443: 1,346, 1,301, and 1,180; industry 3444: 2,942, 3,139, and 3,075; industry 3446: 1,360, 1,326, and (NA); industry 3449: 594, 649, and (NA). The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[3]Prior to 1963, industry 3449 was combined with industry 3446,"Architectural Metalwork."

[4]Industry 3446 was not a separate industry in the 1958 Census of Manufactures but was part of SIC 3449, Miscellaneous Metalwork, N.E.C. However, data were published in 1958 for plants classified in SIC 3449 specializing in the production of ornamental and structural metalwork. This is the source of the separate data for industries 3446 and 3449.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)
	INDUSTRY 3441.--FABRICATED STRUCTURAL STEEL

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [c]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)
		A	B	C	D	E	F	G	H	I

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Product code	Class of products, industry, and miscellaneous receipts	All industries	Fabricated structural steel (SIC 3441)	Metal doors, sash, and trim (SIC 3442)	Fabricated platework (boiler shops) (SIC 3443)	Sheetmetal work (SIC 3444)	Architectural metalwork (SIC 3446)	Miscellaneous metalwork (SIC 3449)	Other industries

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967—Continued

Product code	Class of products, industry, and miscellaneous receipts	Other industries
	Listing of the other industries with over $2 million shipments of primary products	
3441	3312 Blast furnaces and steel mills	4.5
	3317 Steel pipe and tubes	(20-50)
	3321 Cray iron foundries	3.0
	3461 Metal stampings	8.6
	3491 Metal barrels, drums, and pails	(over 2)
	3499 Fabricated metal products, n.e.c	(2-5)
	3531 Construction machinery	6.0
	3535 Conveying and conveying equipment	5.3
	3536 Hoists, cranes, and monorails	(5-10)
	3559 Special industry machinery, n.e.c	(2-5)
	3714 Motor vehicle parts and accessories	(2-5)
	3731 Ship building and repairing	40.5
3442	2431 Millwork	10.3
	2499 Wood products, n.e.c	(2-5)
	2542 Metal partitions and fixtures	(2-5)
	3352 Aluminum rolling and drawing	3.3
	3433 Heating equipment, except electric	(over 2)
	3461 Metal stampings	4.2
	3535 Conveyors and conveying equipment	(2-5)
	3569 General industrial machinery, n.e.c	(over 2)
3443	1929 Ammunition, except for small arms, n.e.c	(5-10)
	3312 Blast furnaces and steel mills	(10-20)
	3317 Steel pipe and tubes	(10-20)
	3433 Heating equipment, except electric	11.6
	3452 Bolts, nuts, rivets and washers	(over 2)
	3491 Metal barrels, drums, and pails	(over 2)
	3494 Valves and pipe fittings	(5-10)
	3498 Fabricated pipe and fittings	(2-5)
	3511 Steam engines and turbines	(20-50)
	3522 Farm machinery	3.2
	3531 Construction machinery	7.9
	3533 Oilfield machinery	8.4
	3551 Food products machinery	5.2
	3559 Special industry machinery, n.e.c	6.9
	Listing of the other industries with over $2 million shipments of primary products--Continued	
3443	3561 Pumps and compressors	(20-50)
	3569 General industrial machinery, n.e.c	4.5
	3585 Refrigeration machinery	22.3
	3599 Miscellaneous machinery, except electrical	(2-5)
	3639 Household appliances, n.e.c	2.6
	3714 Motor vehicle parts and accessories	(10-20)
	3729 Aircraft equipment, n.e.c	(20-50)
	3731 Ship building and repairing	(5-10)
	3821 Mechanical measuring devices	(2-5)
3444	2542 Metal partitions and fixtures	2.7
	2591 Venetian blinds and shades	(5-10)
	3312 Blast furnaces and steel mills	39.8
	3352 Aluminum rolling and drawing	29.4
	3357 Nonferrous wire drawing and insulating	(over 2)
	3461 Metal stampings	8.4
	3497 Metal foil and leaf	(2-5)
	3561 Pumps and compressors	(over 2)
	3564 Blowers and fans	3.2
	3576 Scales and balances	(over 2)
	3585 Refrigeration machinery	5.0
	3621 Motors and generators	(2-5)
	3713 Truck and bus bodies	(5-10)
	3799 Transportation equipment, n.e.c	(over 2)
	3822 Automatic temperature controls	(5-10)
3446	2531 Public building furniture	(5-10)
	3316 Cold furnishing of steel shapes	(over 2)
	3433 Heating equipments, except electric	(2-5)
3449	3273 Ready-mixed concrete	(2-5)
	3312 Blast furnaces and steel mills	103.0
	3531 Construction machinery	(over 2)
	3711 Motor vehicles	(over 2)
	3714 Motor vehicle parts and accessories	(over 2)
	3791 Trailer coaches	(2-5)

Note: Data shown parenthetically are ranges expressed in millions of dollars. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures include data for all four-digit products not shown as well as data for those products where a range is shown.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Unit of measure	Total shipments including interplant transfers			
			1967		1963

34493 42	Fabricated bar joists	1,000 short tons.....	[e]697.4	151.8	381.0	89.3
34493 52	Fabricated concrete reinforcing bars	...do.....	2,254.1	327.8	2,080.3	276.8
	Curtain wall:					
34493 73	Steel, including stainless	Million sq.ft.	(NA)	7.4	14.0	10.1
34493 75	Aluminum	...do.....	(NA)	32.1	11.7	41.4
34493 79	All other, including combination of metals	...do.....	(NA)	22.7	(NA)	13.4
34493 00	Miscellaneous metal building materials and curtain wall, n.s.k.	.....	(X)	24.2	(X)	20.4
34490 00	Miscellaneous metalwork, n.s.k. (For establishments with 10 or more employees. See Note.)	.....	(X)	111.9	(X)	62.3
34490 02	Miscellaneous metalwork, n.s.k. (For establishments with less than 10 employees. See Note.)	.....	(X)	10.7		

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated.

[1]Does not include structural metal fabricated for own use by establishments building ships.

[2]Data differ from those data published in Current Industrial Reports Series MA-34G, "Steel Power Boilers" because:

a. In survey MA-34G the data represent new orders, whereas census of manufactures data represent shipments.

b. In survey MA-34G the data relate to boilers of 100 square feet of heating surface and over, whereas census of manufactures includes those of under 100 square feet of heating surface.

[3]Steel siding, product code 3444116 is included with steel roofing, all types, product code 3444111.

[4]Metal siding of other than steel or aluminum, product code 3444119, is included with metal roofing of other than steel or aluminum, product code 3444115.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments

South Region--Con.		
West South Central Div....	56.7	52.4
Arkansas.....	3.5	(1)
Louisiana.....	3.6	(1)
Oklahoma.....	6.6	11.9
Texas.....	43.0	34.9
West Region.....	120.5	91.7
Mountain Div.....	24.0	14.8
Colorado.....	CC	6.3
New Mexico.....	AA	(1)
Arizona.....	EE	(1)
Pacific Div.....	96.5	76.9
Washington.....	CC	(1)
Oregon.....	CC	(1)
California.....	78.9	60.6

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0.....	AA	$10.0 to $20.0.....	EE
$2.0 to $5.0.....	BB	$20.0 to $50.0.....	FF
$5.0 to $10.0.....	CC	$50.0 and over.....	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

TABLE 6C. Product Classes–Quantity and Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

Code	Product class	1967	1966[1]	1965[1]	1964[1]	1963	1958	1954	1947
3441-	Fabricated structural steel.....million dollars..	2,561.5	2,246.2	1,948.9	1,785.6	1,604.0	1,602.1	1,103.9	527.1
34411	Fabricated structural metal for buildings:								
	Quantity.....1,000 short tons..	[2] [e] 4,240.4	4,137.7	3,897.2	3,574.2	3,126.9	3,135.0	(NA)	(NA)

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1] These figures represent estimated derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2] These figures include an estimate for those products whose quantity are unavailable.

[e] 10 to 30 percent of this figure was estimated.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

(See appendix, "Explanation of Terms")

Code	Material	Unit of measure	1967		1963	
			Quantity	Delivered cost (million dollars)	Quantity	Delivered cost (million dollars)

970099	All other materials and components, parts, containers, and supplies consumed	...	(X)	100.9	(X)	49.4
976000	Materials, etc., n.s.k.[4]	...	(X)	83.7	(X)	43.3

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [C]From 10 to 30 percent of this figure was estimated. (Z) Less than $50 thousand.

[1]These figures are understated by $5 to $10 million because of apparent undercoverage of carbon steel pipe and tube.

[2]Included with material code 970099, "All other materials and components, etc.,"

[3]No data are available for the quantities of castings produced and consumed in the same establishment.

[4]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

[5]These items are understated by $5 million or less because of apparent undercoverage of carbon steel pipe and tube.

[6]Data for material codes 331009, 331013, and 331017 are included with material code 331019, All other carbon steel mill shapes and forms

[7]Data for material code 335202 is included with material code 335209, All other aluminum mill shapes and forms.

TABLE 7B. Fuels and Electric Energy Consumed: 1967

(See Appendix, Explanation of Terms)

Code	Item	Unit of measure	Fabricated structural steel (SIC 3441)	Metal doors, sash, and trim (SIC 3442)	Fabricated platework (boiler shops) (SIC 3443)	Sheet metalwork (SIC 3444)
	Cost of purchased fuels and electric energy, total....	Million dollars.	23.2	11.7	25.8	12.6
	Cost of purchased fuels, total.....	...do.....	11.0	4.4	11.4	5.8
121005	Coal (anthracite, bituminous, and lignite):

	Quantity.....	1,000 barrels...	25.8	8.5	198.1	24.7
	Cost.....	Million dollars.	0.1	(Z)	0.5	0.1
131300	Gas (natural, manufactured mixed, blast furnace, coke-oven, and other gas):					
	Quantity.....	Million cu. ft..	6,567.3	3,958.2	10,195.2	3,775.2
	Cost.....	Million dollars.	3.0	1.9	5.0	2.4
960011 960013	Other fuels (gasoline, LPG, wood, etc.).....	...do.....	0.9	0.2	0.7	0.3
	Fuels, n.s.k.....	...do.....	5.8	1.9	3.9	2.5
	Purchased electric energy:					
	Quantity.....	Million kw.-hrs.	863.3	483.9	1,019.1	456.4
	Cost.....	Million dollars.	12.1	7.3	14.4	6.8
	Quantity of electric energy generated less quantity sold.....	Million kw.-hrs.	-	1.4	2.3	2.8
	Total energy used for heat and power[1].....	Million kw.-hrs.	6,109.7	2,861.8	6,828.6	3,504.5

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Man-hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 9. Establishments and Production Workers for Selected Metalworking Operations: 1967

To be published in a separate subject chapter titled "Selected Metalworking Operations."

SCREW MACHINE PRODUCTS, FASTENERS AND WASHERS; METAL STAMPINGS; AND METAL SERVICES

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3451--Screw Machine Products
3452--Bolts, Nuts, Screws, Rivets, and Washers
3461--Metal Stampings
3471--Electroplating, Plating, Polishing, Anodizing, and Coloring
3479--Coating, Engraving, Allied Services, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3451--SCREW MACHINE PRODUCTS

This industry comprises establishments primarily engaged in manufacturing automatic or hand screw machine products from rod, bar, or tube stock of metal, fiber, plastics or other materials. The products of this industry consist of a wide variety of unassembled parts and are usually manufactured on a job or order basis. Establishments primarily engaged in manufacturing standard bolts, nuts, rivets, screws and other industrial fasteners on headers, threaders and nut forming machines are classified in industry 3452. For a detailed list of products of industry 3451, refer to table 6A, product codes 3451012 to 3451098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Screw Machine Products Industry in 1967 totaled $1,022 million. This included shipments of screw machine products (primary products), valued at $934 million, shipments of other products (secondary products) valued at $41 million, and miscellaneous receipts of $47 million.

This industry's shipments of screw machine products (primary products) in 1967 represented 96 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 97 percent.

Industry 3451 shipments of screw machine products (primary products) in 1967 represented 90 percent (coverage ratio) of these products valued at $1,036 million shipped by all industries. In 1963, the coverage ratio was also 90 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments,

key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3451, these establishments accounted for approximately 2 percent of payroll and 3 percent of value added by manufacture.

3452--BOLTS, NUTS, SCREWS, RIVETS, AND WASHERS

This industry comprises establishments primarily engaged in manufacturing bolts, nuts, screws, rivets, washers, formed and threaded wire goods, and special industrial fasteners. Rolling mills engaged in manufacturing similar products are classified in Major Group 33, and establishments primarily engaged in manufacturing screw machine products in industry 3451. For a detailed list of products of industry 3452, refer to table 6A, product codes 3452101 to 3452398.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Bolts, Nuts, Rivets, and Washers Industry in 1967 totaled $1,644 million. This included shipments of bolts, nuts, rivets, and washers (primary products), valued at $1,450 million, shipments of other products (secondary products) valued at $97 million, and miscellaneous receipts (mainly resales) of $97 million.

This industry's shipments of bolts, nuts, rivets, and washers (primary products) in 1967 represented 94 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 92 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 63 percent of the total industry shipments are represented by plants specializing in product class 34521 Bolts, nuts, and other standard industrial fasteners; and 25 percent in 34522, Special industrial fasteners.

Industry 3452 shipments of bolts, nuts, rivets, and washers (primary products) in 1967 represented 90 percent (coverage ratio) of these products valued at $1,613 million shipped by all industries. In 1963, the coverage ratio was 90 percent. Other industries shipping bolts, nuts, rivets, and washers (primary products) included industry 3312, Blast Furnaces and Steel Mills, $75 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3452, these establishments accounted for approximately less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3461--METAL STAMPINGS

This industry comprises establishments primarily engaged in manufacturing metal stampings by the use of tools, dies, jigs, and fixtures to punch, draw, form or otherwise modify materials under pressure in a machine (primarily punch and draw presses). For a detailed list of products of industry 3461, refer to table 6A, product codes 3461113 to 3461898.

The code number as well as the definition of this industry was unchanged between 1967 and 1963. However, significant revisions have been made to 1963 data to include automotive stamping plants operated by automobile producing companies.

Value of shipments and other receipts of the Metal Stampings Industry in 1967 totaled $5,894 million. This included shipments of metal stampings (primary products), valued at $5,052 million, shipments of other products (secondary products) valued at $632 million, and miscellaneous receipts of $210 million.

This industry's shipments of metal stampings (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments (primary and secondary). Secondary products shipped by this industry in 1967 consisted mainly of special dies, tools, jigs, and fixtures (SIC 3544) ($241 million), and electric housewares and fans (SIC 3534) ($38 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 56 percent of the total industry shipments are represented by plants specializing in product class 34613, Job stampings, automotive; and 19 percent in 34612, Job stampings, except automotive.

Industry 3461 shipments of metal stampings (primary products) in 1967 represented 91 percent (coverage ratio) of these products valued at $5,525 million shipped by all industries. Other industries shipping (primary products) consisted mainly of industry 3711, Motor Vehicles, $135 million; and industry 3312, Blast Furnaces And Steel Mills, $27 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3461, these establishments accounted for approximately less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3471--ELECTROPLATING, PLATING, POLISHING, ANODIZING, AND COLORING

The Electroplating, Plating, Polishing, Anodizing, and Coloring Industry includes establishments primarily engaged in all types of electroplating, plating, anodizing, coloring, and finishing of metals and formed products for the trade. Most of the work done in this industry is done on materials owned by others. For a detailed list of products of industry 3471, refer to table 6A, product code 3471011.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Plating and Polishing Industry in 1967 totaled $791 million. This includes shipments of plating and polishing (primary products), valued at $756 million, shipments of other products (secondary products) valued at $27 million, and miscellaneous receipts (mainly resales) of $8 million.

Secondary products shipped by this industry in 1967 included primary metal products, n.e.c. (SIC 3399) ($11 million).

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3471, these establishments accounted for approximately 6 percent of payroll and 7 percent of value added by manufacture.

3479--COATING, ENGRAVING, ALLIED SERVICES, NOT ELSEWHERE CLASSIFIED

The Coating, Engraving, and Allied Services, Not Elsewhere Classified, Industry includes establishments primarily engaged in performing the following types of services on metals: (1) enameling, lacquering, and varnishing metal products for the trade; (2) hot dip galvanizing of mill sheets, plates and bars, castings, and formed products fabricated of iron and steel; in hot dip coating such items with aluminum, lead, or zinc; in retinning cans and utensils; (3) in engraving, chasing, and etching jewelry, silverware, notarial and other seals, and other metal products for the trade and for job contracting for purposes other than printing; (4) and other metal services, not elsewhere classified. Establishments primarily engaged in electroplating, plating, polishing, anodizing, coloring, and finishing of metals and formed products for the trade are classified in industry 3471; and those producing porcelain enameled products in industry 3461. For a detailed list of products of industry 3479, refer to table 6A, product codes 3479013 to 3479081.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Metal Coating and Allied Services Industry in 1967 totaled $471 million. This included shipments of metal coating and allied services (primary products), valued at $404 million, shipments of other products (secondary products) valued at $58 million, and miscellaneous receipts (mainly resales) of $9 million.

Secondary products shipped by this industry in 1967 included primary metal products, n.e.c. (SIC 3399) ($12 million), and miscellaneous plastics products (SIC 3079) ($5 million).

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3479, these establishments accounted for approximately 5 percent of payroll and 6 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See appendix, "Explanation of Terms")

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio
	Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(percent)	(percent)

Note: In 1967, 1963, and 1958, the number of companies in industry 3451 was 1,847, 1,861, and 1,785, respectively; in industry 3452: 577, 504, and 468; industry 3461: 2,564, 2,491, and 2,372; industry 3471: 3,170, 2,968, and 2,614; industry 3479: 1,393, 1,227, and 986. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Footnotes continued on next page.

TABLE 1A. General Statistics: 1958 to 1967—Continued

Footnotes for Table 1A--34D

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing digures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (AMS). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume. [2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry. [3]Data for 1963 to 1966 have been revised by the inclusion of automotive stampings plants operated by automobile producing companies. Prior to this revison, most of these plants were classified in the automotive industry. The data shown excluding such plants for the years 1958 to 1966 are as previously published for this industry. The area data for prior years have not been revised on a basis comparable to 1967. [4]Some small establishments in this industry may have been misclassified as to industry. This does not significantly affect the statistics other than the number of establishments (See section of text on scope and coverage for further explanation). [5]Relationships are not meaningful because of the predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

TABLE 2. General Statistics, by Geographic Areas: 1967 and 1963—Continued

Footnotes for Table 2 34-D

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [6]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[3]Data for 1963 are not comparable to the 1967 information. (See footnote 3, table 1A).

TABLE 3. Detailed Statistics: 1967 and 1963

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)
		A	B	C	D	E	F	G	H	I
3451	Screw machine products.....1967..	1,021.5	933.6	40.5	47.4	96	1,036.1	933.6	102.5	90
	1963..	589.0	538.7	18.8	31.5	97	599.4	538.7	60.7	90
3452	Bolts, nuts, rivets, and washers.....1967..	1,643.9	1,449.5	97.2	97.2	94	1,613.1	1,449.5	163.6	90
	1963..	1,218.2	1,058.4	92.0	67.8	92	1,175.7	1,058.4	117.3	87
3461	Metal stampings.....1967..	5,893.7	5,051.9	631.5	210.3	89	5,525.2	5,051.9	473.3	91

	1963..	517.6	[1]501.9	10.3	5.4	([1])	([2])	501.9	([2])	([2])
3479	Metal coating and allied services.....1967..	471.3	[1]404.3	58.3	8.7	([1])	([3])	404.3	([3])	([3])
	1963..	322.1	[1]286.5	22.6	13.0	([1])	([3])	286.5	([3])	([3])

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [r]Revised.

[1]Specialization ratio is not meaningful because of the predominance of receipts for contract and commission work on materials owned by others. Such receipts are treated as primary products for this industry.

[2]Data on receipts for plating and polishing are not available for establishments classified outside industry 3471.

[3]Data on receipts for metal coating and engraving, etc. are not available for establishments classified outside industry 3479.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Note: Data shown parenthetically are ranges expressed in millions of dollars. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Data on receipts for (1) plating and polishing; and (2) metal coating and allied services are not available for establishments classified outside industries 3471 and 3479, respectively.

[2]Includes, where appropriate, values for those 4-digit product groups for which either the symbol D or a value range, eg. (2-5), under 2, etc. appear above.

TABLE 6A-1. Quantity and Value of Shipments by All Producers: 1967 and 1963

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See appendix under "Value of shipments")

34610 00	Metal stampings, n.s.k. (For establishments with 10 or more employees. See note.)		(X)	213.8	(X)	98.1
34610 02	Metal stampings, n.s.k. (For establishments with fewer than 10 employees.)		(X)	32.3		

Product code	Product	Total value of shipments including interplant transfers (million dollars)	
		1967	1963
34710 11	Electroplating, plating, and polishing[5]	756.1	501.9
3479- --	METAL COATING AND ALLIED SERVICES, TOTAL[5]	404.3	[1]286.5
34790 13	Etching and engraving metal nameplates	46.5	37.5
34790 19	Other engraving	8.0	
34790 31	Galvanizing and other hot dip coating	60.0	52.6
	Organic coatings, enamels, lacquers including alkydes, vinyls, acrylics, plastisols, etc.:		
34790 61	Coil coating	106.0	140.1
34790 71	Spray coating, including electrostatic coating	54.4	
34790 81	All other, including curtain coating, wash coating, etc	35.9	
34790 00	Metal coating and allied services, n.s.k. (Represents principally establishments with 10 employees or more in 1967. See Note.)	68.7	56.4
34790 02	Metal coating and allied services, n.s.k. (Represents principally establishments with fewer than 10 employees in 1967. See Note.)	24.8	

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [6]From 10 to 30 percent of this figure was estimated.

[1]Data are limited to vitreous-enameled products produced from materials owned by the producing company. Data do not include the value of receipts for enameled work done on materials owned by others (enameled products for the trade).

[2]"Job stampings" are mainly parts which are sold to other manufacturers for incorporation into their own products. Job stampings may be made from materials owned by the customer. These figures represent only those stampings made from materials owned by the establishment performing the stamping operation.

[3]Data for automotive job stampings for 1963 have been revised to include the output of the automotive stampings plants operated by automobile producing companies. The products for most of these plants had been classified as automotive parts.

[4]See table 6A-2 for detailed product data.

[5]Value consists principally of receipts for work done on materials owned by others. The value represents only work done by establishments classified in industry 3471 and 3479, respectively.

TABLE 6A-2. Metal Closures for Containers: 1967 and 1963

Product code	Product	Unit of measure	Quantity of shipments including interplant transfers	
			1967	1963
	METAL COMMERCIAL CLOSURES (CAPS), FOR GLASS CONTAINERS	Million units	16,369.7	15,746.6

3461655	METAL CLOSURES FOR METAL CANS (EXCEPT CROWNS)[3]	Million units	716.1	798.3
3461657	METAL CLOSURES FOR PLASTIC CONTAINERS, VIALS, AND TUBES (RIGID, FLEXIBLE, AND COLLAPSIBLE)	...do	354.5	304.9
	METAL CLOSURES FOR GLASS AND METAL PRESSURE CONTAINERS	Million gross	345.3	315.8
	Metal crowns:			
3461715	Soft drink containers	...do	221.9	209.8
3461719	Beer and all other	...do	104.8	[4]106.0
	All other metal closures (roll-ons, snip, tear-off and flip cans):			
3461663	Soft drink containers	...do	5.3	(NA)
3461669	Beer and all other	...do	13.3	(NA)

Source: Current Industrial Reports Series M-34H, Closures for Containers.

Note: Detail may not add to totals due to independent rounding.

(NA) Not available.
(D) Withheld to avoid disclosing figures for individual companies. In some cases figures which are otherwise publishable are withheld to avoid indirect disclosure by subtraction from higher-level totals or from related figures.
[1]Includes top seal vacuum closures with screw and lug thread.
[2]Includes other types of home canning closures.
[3]Includes caps produced "for own use" by can producing companies.
[4]Includes a small quantity of crowns for "other containers."

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

TABLE 6C. Product Classes-Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

(In millions of dollars)

Code	Product class	1967	1966[1]	1965[1]	1964[1]	1963	1958	1954	1947

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.

[2]Data for 1963 to 1966 have been revised by the inclusion of automotive stamping operated by automobile producing companies. Prior to this revision, most of these products were classified as automotive parts.

[3]Represents only work done by establishments classified in the industry to which the product (service) is primary.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

976000	Materials, parts, containers, and supplies, n.s.k.[2]	.....	(X)	236.4	(X)	109.1

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated.

[1]In 1967 there were, in addition 5.5 thousand short tons of steel castings produced and consumed in the same establishment. The comparable figure for 1963 was 1.9 thousand.

[2]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967 this includes estimates for companies that were not mailed report forms.

[3]These figures include "Insulated wire and cable."

[4]In 1967, there were in addition 3.2 thousand short tons of steel castings produced and consumed in the same establishments. Data for 1963 are not available.

[5]Data for these materials have been revised to include the consumption of materials by automotive stampings plants operated by automobile producing companies. Most of these plants had previously been classified in the automotive industry.

[6]These figures are understated by $5 million or less because of apparent undercoverage of carbon steel pipe and tube.

[7]Included with material code 970099 "All other materials and components, etc."

[8]No data are available for the quantities of castings produced and consumed in the same establishment.

[9]Data are included with material code 970099 "All other materials and components, etc., to avoid disclosing the operations of individual companies.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments	All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new
			Number	Payroll	Number	Man-hours	Wages				
		(number)	(1,000)	(million dollars)	(1,000)	(millions)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)
3451	SCREW MACHINE PRODUCTS										
	ENTIRE INDUSTRY	1 874	49.0	349.1	41.5	88.2	258.5	641.5	386.2	1 021.5	49.7

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 9. Establishments and Production Workers for Selected Metalworking Operations: 1967

(To be published in a seperate subject chapter titled "Selected Metalworking Operation")

MISCELLANEOUS METAL PRODUCTS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3481--Miscellaneous Fabricated Wire Products
3491--Metal Shipping Barrels, Drums, Kegs, and Pails
3492--Safes and Vaults
3493--Steel Springs
3494--Valves and Pipe Fittings, Except Plumbers' Brass Goods
3496--Collapsible Tubes
3497--Metal Foil and Leaf
3498--Fabricated Pipe and Fabricated Pipe Fittings
3499--Fabricated Metal Products, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3481--MISCELLANEOUS FABRICATED WIRE PRODUCTS

This industry comprises establishments primarily engaged in manufacturing miscellaneous fabricated wire products from purchased wire. Rolling mills engaged in manufacturing wire products are classified in Major Group 33; establishments manufacturing nonferrous wire nails and spikes in industry 3399; those drawing and insulating nonferrous wire in industry 3357; and those assembling wire bedsprings or seats are classified in Major Group 25. For a detailed list of products of industry 3481, refer to table 6A, product codes 3481111 to 3481998.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Miscellaneous Fabricated Wire Products Industry in 1967 totaled $1,220 million. This included shipments of miscellaneous fabricated wire products (primary products), valued at $1,090 million, shipments of other products (secondary products) valued at $80 million, and miscellaneous receipts (mainly resales) of $50 million.

This industry's shipments of miscellaneous fabricated wire products (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 93 percent. Secondary products shipped by this industry in 1967 included steel springs ($23 million), and metal stampings ($8 million).

Industry 3481 shipments of miscellaneous fabricated wire products (primary products) in 1967 represented 59 percent (coverage ratio) of these products valued at $1,833 million shipped by all industries. In 1963, the coverage ratio was 65 percent. Other industries shipping miscellaneous fabricated wire products (primary products) included industry 3493, Steel Springs, $14 million; industry 3441 Fabricated Structural Steel, $7 million; and industry 3449, Miscellaneous Metalwork, $7 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3481, these establishments accounted for approximately 2 percent of payroll and 2 percent of value added by manufacture.

3491--METAL SHIPPING BARRELS, DRUMS, KEGS, AND PAILS

This industry comprises establishments primarily engaged in manufacturing ferrous and nonferrous shipping barrels, drums, kegs, and pails. For a detailed list of products of industry 3491, refer to table 6A, product codes 3491121 to 3491319.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Metal Barrels, Drums, and Pails Industry in 1967 totaled $371 million. This included shipments of metal barrels, drums, and pails (primary products), valued at $331 million, shipments of other products (secondary products), valued at $29 million, and miscellaneous receipts of $11 million.

This industry's shipments of metal barrels, drums, and pails (primary products) in 1967 represented 92 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 92 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 66 percent of the total industry shipments are represented by plants specializing in product class 34912, steel shipping barrels and drums (over 12 gallon capacity); and 21 percent in 34911, steel shipping pails (12 gallon capacity and under).

Industry 3491 shipments of metal barrels, drums, and pails (primary products) in 1967 represented 88 percent (coverage ratio) of these products valued at $378 million shipped by all industries. In 1963, the coverage ratio was 86 percent. Other industries shipping metal barrels, drums, and pails (primary products) consisted mainly of industry 3461, Metal Stampings, $13 million; and industry 3411, Metal Cans, $11 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3491, these establishments accounted for approximately less than 1 percent, of payroll and less than 1 percent of value added by manufacture.

3492--SAFES AND VAULTS

This industry comprises establishments primarily engaged in manufacturing fire or burglary resistive steel safes and vaults (except concrete grave vaults, industry 3272, and metal grave vaults, industry 3994), and similar fire or burglary resistive products. For a detailed list of products of industry 3492, refer to table 6A, product codes 3492015 to 3492098.

The code number as well as the definition of this induatry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Safes and Vaults Industry in 1967 totaled $99 million.

This industry's shipments of safes and vaults (primary products) in 1967 represented 87 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 81 percent.

Industry 3492 shipments of safes and vaults (primary products) in 1967 represented 85-90 percent (coverage ratio) of these products valued at $80 million shipped by all industries. In 1963, the coverage ratio was 90-95 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3492, these establishments accounted for approximately less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3493--STEEL SPRINGS

This industry comprises establishments primarily engaged in manufacturing leaf springs, hot wound springs, and coiled flat springs. Establishments primarily engaged in manufacturing wire springs are classified in industry 3481, and rolling mills manufacturing steel springs in industry 3312. For a detailed list of products of industry 3493, refer to table 6A, product codes 3493004 to 3493098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Steel Springs Industry in 1967 totaled $192 million. This included shipments of steel springs (primary products), valued at $165 million, shipments of other products (secondary products) valued at $22 million, and miscellaneous receipts (mainly resales) of $5 million.

This industry's shipments of steel springs (primary products) in 1967 represented 88 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 91 percent. Secondary products shipped by this industry in 1967 consisted mainly of miscellaneous fabricated wire products ($14 million).

Industry 3493 shipments of steel springs (primary products) in 1967 represented 63 percent (coverage ratio) of these products valued at $264 million shipped by all industries. In 1963, the coverage ratio was 67 percent. Other industries shipping steel springs (primary products) consisted mainly of industry 3714, Motor Vehicle Parts and Accessories, $45 million; and industry 3481, Miscellaneous Fabricated Wire Products, $23 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3493, these establishments accounted for approximately 1 percent of payroll and 1 percent of value added by manufacture.

3494--VALVES AND PIPE FITTINGS, EXCEPT PLUMBERS' BRASS GOODS

This industry comprises establishments primarily engaged in manufacturing valves for controlling the flow of liquids or gases in pipes and mains, and for machinery. Establishments primarily engaged in manufacturing faucets, spigots, and similar plumbers' brass goods and fittings are classified in industry 3432. For a detailed list of products of industry 3494, refer to table 6A, product codes 3494121 to 3494679.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Valves and Pipe Fittings Industry in 1967 totaled $2,275 million. This included shipments of valves and pipe fittings (primary products), valued at $1,856 million, shipments of other products (secondary products) valued at $286 million, and miscellaneous receipts (mainly resales) of $133 million.

This industry's shipments of valves and pipe fittings (primary products) in 1967 represented 87 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 86 percent. Secondary products shipped by this industry in 1967 included pumps and compressors ($33 million), aircraft engines and engine parts ($21 million), and refrigeration machinery ($19 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8.

Industry 3494 shipments of valves and pipe fittings (primary products) in 1967 represented 88 percent (coverage ratio) of these products valued at $2,103 million shipped by all industries. In 1963, the coverage ratio was 85 percent. Other industries shipping valves and pipe fittings (primary products) included industry 3561, Pumps and Compressors, $42 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3494, these establishments accounted for approximately less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3496--COLLAPSIBLE TUBES

This industry comprises establishments primarily engaged in manufacturing collapsible tubes defined as cylindrical containers for viscous products, made of thin flexible metal, usually of tin, tin-lined lead, lead, lead-tin alloy or aluminum, with integral shoulder and neck, provided with an appropriate size opening in the throat, and usually with a screw cap made of plastic material for closure over the neck. For a detailed list of products of industry 3496, refer to table 6A, product codes 3496011 to 3496029.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Collapsible Tubes Industry in 1967 totaled $65 million. This included shipments of collapsible tubes (primary products), valued at $51 million, shipments of other products (secondary products) valued at $13 million, and miscellaneous receipts (mainly resales) of $1 million.

This industry's shipments of collapsible tubes (primary products) in 1967 represented 80 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 88 percent.

Industry 3496 shipments of collapsible tubes (primary products) in 1967 represented 100 percent (coverage ratio) of these products valued at $51 million shipped by all industries. In 1963, the coverage ratio was also 100 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3494, these establishments accounted for approximately less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3497--METAL FOIL AND LEAF

This industry comprises establishments primarily engaged in manufacturing aluminum, gold, silver, tin, and other metal foil (including converted metal foil) and leaf. Establishments primarily engaged in manufacturing plain aluminum foil are classified in industry 3352. For a detailed list of products of industry 3497, refer to table 6A, product codes 3497020 to 3497057.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Metal Foil and Leaf Industry in 1967 totaled $266 million. This included shipments of metal foil and leaf (primary products), valued at $215 million, shipments of other products (secondary products) valued at $38 million, and miscellaneous receipts of $13 million.

This industry's shipments of metal foil and leaf (primary products) in 1967 represented 85 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 86 percent.

Industry 3497 shipments of metal foil and leaf (primary products) in 1967 represented 56 percent (coverage ratio) of these products valued at $386 million shipped by all industries. In 1963, the coverage ratio was 41 percent. Other industries shipping metal foil and leaf (primary products) consisted mainly of industry 3352, Aluminum Rolling and Drawing, $113 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3497, these establishments accounted for approximately less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3498--FABRICATED PIPE AND FABRICATED PIPE FITTINGS

This industry comprises establishments primarily engaged in fabricating pipe and pipe fittings from purchased pipe, by cutting, threading, bending, etc. Establishments primarily engaged in manufacturing cast iron pipe and fittings, including cast and forged pipe fittings which have been machined and threaded, are classified in industry 3321; welded and heavy riveted pipe in industry 3317; and seamless steel pipe in industry 3317. Establishments primarily engaged in manufacturing products such as bannisters, railings, and guards from pipe are classified in industry 3446. For a detailed list of products of industry 3498, refer to table 6A, product codes 3498013 to 3498019.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Fabricated Pipe and Fittings Industry in 1967 totaled $508 million. This included shipments of fabricated pipe and fittings (primary products), valued at $440 million, shipments of other products (secondary products) valued at $23 million, and miscellaneous receipts (mainly resales) of $45 million.

This industry's shipments of fabricated pipe and fittings (primary products) in 1967 represented 95 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 92 percent.

Industry 3498 shipments of fabricated pipe and fittings (primary products) in 1967 represented 90 percent (coverage ratio) of these products valued at $486 million shipped by all industries. In 1963, the coverage ratio was 91 percent. Other industries shipping fabricated pipe and fittings (primary products) included industry 3494, Valves and Pipe Fittings, $11 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3498, these establishments accounted for approximately less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3499--FABRICATED METAL PRODUCTS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing fabricated metal products, not elsewhere classified. Establishments primarily engaged in manufacturing advertising novelties are classified in industry 3993. For a detailed list of products of industry 3499, refer to table 6A, product codes 3499043 to 3499059.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Fabricated Metal Products, N.E.C., Industry in 1967 totaled $982 million. This included shipments of fabricated metal products, n.e.c. (primary products), valued at $837 million, shipments of other products (secondary products) valued at $92 million, and miscellaneous receipts (mainly resales) of $53 million.

This industry's shipments of fabricated metal products, n.e.c. (primary products) in 1967 represented 90 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 89 percent. Secondary products shipped by this industry in 1967 included general industrial machinery ($7 million).

Industry 3499 shipments of fabricated metal products, n.e.c., (primary products) in 1967 represented 71 percent (coverage ratio) of these products valued at $1,173 million shipped by all industries. In 1963, the coverage ratio was 62 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3499, these establishments accounted for approximately 2 percent of payroll and 2 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio

Note: In 1967, 1963, and 1958, the number of companies in industry 3481 was 1,430, 1,464, and 1,371, respectively; in industry 3491: 91, 95, and 78; industry 3492: 28, 28, and 31; industry 3493: 105, 91, and 84; industry 3494: 575, 580, and 549; industry 3496: 15, 18, and 18; industry 3497: 59, 56, and 59; industry 3498: 356, 328, and 273; industry 3499: 1,223, 1,254, and 1,017. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under $50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250 to 499 employees
CC - 500 to 999 employees
EE - 1,000 to 2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)
		A	B	C	D	E	F	G	H	I

Note: See Appendix, Explanation of Terms, for discussion of items.

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1] Included in this industry are selected fabricated wire products (see footnote 1 in table 5B) which are also primary to industry 3315, Steel Wire Drawing, Etc. A 1967 coverage ratio computed on the basis of including both industries to which these products are primary would total 79 percent; 59 percent by industry 3481 and 20 percent by industry 3315. The remaining 21 percent was shipped by establishments in other industries, including industry 3312, Blast Furnaces and Steel Mills, and industry 3357, Nonferrous Wire Drawing, Etc. A comparable 1963 coverage ratio would also total 79 percent; 65 percent by industry 3481 and 14 percent by industry 3315.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Product class	Class of products, industry, and miscellaneous receipts	All industries	Miscellaneous fabricated wire products (SIC 3481)	Metal barrels, drums, and pails (SIC 3491)	Safes and vaults (SIC 3492)	Steel springs (SIC 3493)	Valves and pipe fittings (SIC 3494)	Collapsible tubes (SIC 3496)	Metal foil and leaf (SIC 3497)	Fabricated pipe and fittings (SIC 3498)	Fabricated metal products, n.e.c. (SIC 3499)	Other industries
	Total shipments and miscellaneous receipts	(X)	1,220.4	370.7	98.7	192.4	2,274.5	65.0	265.5	508.1	981.7	(X)

	3461- Metal stampings	5.9
	3522- Farm machinery	2.0
	3532- Mining machinery	(over 2)
	3554- Paper industries machinery	(over 2)
	3964- Needles, pins, and fasteners	(2-5)
3491-	2655- Fiber cans, drums, and related material	(over 2)
	3411- Metal cans	11.2
	3461- Metal stampings	12.5
	3559- Special industry machinery, n.e.c.	(over 2)
	3639- Household appliances, n.e.c.	(over 2)
	3729- Aircraft equipment, n.e.c.	(over 2)
3493-	3316- Cold rolled steel shapes	(over 2)
	3391- Iron and steel forgings	(2-5)
	3711- Motor vehicles	(over 2)
	3714- Motor vehicle parts and accessories	45.1
3494-	3069- Fabricated rubber products n.e.c.	(over 2)
	3312- Blast furnace and steel mill products	(over 2)
	3391- Iron and steel forgings	(20-50)
	3392- Nonferrous forgings	(over 2)
	3429- Hardware n.e.c.	10.3
	3432- Plumbing fittings and brass goods	6.5
	3433- Heating equipment, except electric	5.8
	3443- Fabricated platework (boiler shop) products	14.9
	3444- Sheet metalwork	(over 2)
	3511- Steam engines and turbines	(5-10)
	3533- Oil field machinery	8.2
	3542- Machine tools, metal-forming types	3.7
	3552- Textile machinery	(over 2)
	3561- Pumps and compressors	42.0
	3569- General industrial machinery, n.e.c.	6.5
	3585- Refrigeration machinery	(over 2)
	3586- Measuring and dispensing pumps	7.8
	3599- Miscellaneous machinery, except electrical	5.1
	Listing of the other industries with over $2 million shipments of the primary products	
3494-	3644- Noncurrent carrying wiring devices	(over 2)
	3729- Aircraft equipment, n.e.c.	(2-5)
	3731- Ship building and repairing	(over 2)
	3821- Mechanical measuring devices	15.5
	3822- Automatic temperature controls	9.8
3497-	2641- Coated and glazed paper	28.1
	2649- Converted paper products, n.e.c.	15.9
	2751- Commercial printing, except lithographic	7.2
	2771- Greeting cards	2.1
	3352- Rolled and drawn aluminum	113.1
3498-	1929- Ammunition, except for small arms, n.e.c.	(over 2)
	2911- Petroleum refinery products	(over 2)
	3429- Hardware, n.e.c.	(over 2)
	3443- Fabricated platework (boiler shop products)	2.6
	3522- Farm machinery	(over 2)
3499-	1961- Small arms ammunition	(over 2)
	2499- Wood products, n.e.c.	2.0
	2514- Metal household furniture	7.3
	2542- Metal partitions and fixtures	4.4
	2891- Adhesives and gelatin	(over 2)
	3079- Miscellaneous plastics products	3.3
	3312- Blast furnace and steel mill products	(100-200)
	3321- Gray iron castings	(2-5)
	3323- Steel castings	(over 2)
	3429- Hardware, n.e.c.	2.9
	3432- Plumbing fittings and brass goods	2.1
	3442- Metal doors, sash, and trim	2.4
	3443- Fabricated platework (boiler shop products)	3.3
	3444- Sheet metalwork	(2-5)
	3449- Miscellaneous metalwork	(2-5)
	3452- Bolts, nuts, rivets, and washers	(2-5)
	3461- Metal stampings	12.7
	3522- Farm machinery	(over 2)
	3531- Construction machinery	(5-10)
	3535- Conveyors and conveying equipment	(2-5)
	3545- Machine tool accessories	(5-10)
	3643- Current carrying wiring devices	(over 2)
	3714- Motor vehicle parts and accessories	5.8
	3731- Ship building and repairing	(2-5)
	3914- Silverware and plated ware	(over 2)

Note: Data shown parenthetically above are expressed in millions of dollars. Detailed figures may not add to totals because of independent rounding of independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (D) Withheld to avoid disclosing figures for individual companies.

[1]The totals for product classes 34811, 34814, 34815, 34816, and 34189 include respectively the totals for product classes 33151, 33157, 33575, 33156 and 33159. Shipments of these product classes totaled as follows:

Product class	Value (millions of dollars)
33151	164.2
33157	35.4
33575	36.2
33156	75.7
33159	293.7

[2]Includes, where applicable, the value of 4-digit products not shown as well as those for which a range (e.g. (2-5), (5-10), etc.) or the symbol (D) are shown.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Unit of measure	Total shipments including interplant transfers			
			1967		1963

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Unit of measure	Total shipments including interplant transfers	
			Quantity	Value (million dollars)
3494- --	VALVES AND PIPE FITTINGS--Continued		1967	
34943 --	Other metal valves for piping systems and equipment (except plumbing and heating valves)--Con. Gates, globes angles, straightway (Y type) checks, stop and check, cross, 3- and 4-way, etc. (including remote control operators, but excluding automatic regulating and control valves)--Continued			
	Steel, all pressures:			
34943 21	Cast and forged carbon steel	1,000 s. tons	42.3	110.0
34943 23	Cast and forged alloy steel (all types, including stainless)	...do	29.8	71.6
34943 25	Brass and bronze (125 lb. w.s.p. and over)	...do	29.6	109.7
34943 31	Ball valves (including operators), all metals, pressures and types	...do	(NA)	61.6
34943 33	Butterfly valves (including operators), all metals, pressures and types	...do	17.7	41.4
34943 35	Plug valves (including operators) all metals, pressures and types (such as lubricated, nonlubricated, cylindrical, eccentric, sleeve lined)	...do	24.3	59.2
34943 37	Cocks and stops, all metals, pressures and types	...do	4.8	13.1
34943 39	Diaphragm and pinch valves (including operators), all metals, pressures and types	...do	(NA)	10.6
34943 41	All other engineered specification valves, 125 lb. w.s.p. and over (including operators), n.e.c.	...do	(NA)	6.6
34943 43	All other general purpose valves (including operators), except plumbing and heating valves, n.e.c.	...do	7.5	24.4
	Pop safety valves and relief valves (over 15 lb. w.s.p.):			
34943 51	Iron	...do	e0.7	2.9
34943 53	Steel (carbon and alloy)	...do	e4.4	28.3
34943 55	Brass and bronze	...do	3.7	14.5
34943 57	Compressed gas cylinder valves	1,000 units	(NA)	8.7
34943 61	Steam traps (over 15 lb. w.s.p.)	Million units	1.1	12.2
34943 98	Other metal valves and specialties	1,000 s. tons	(X)	46.3
34943 00	Other metal valves for piping systems and equipment, n.s.k.	.....	(X)	12.5
34944 --	Plumbing and heating valves and specialties (except plumbers' brass goods), total[5]	.....	(X)	101.2
34944 11	Gates, globes, angles, straightway (Y type) checks, stop and check, cross, 3 and 4 way, drain, etc., brass and bronze (under 125 lb. w.s.p.)	1,000 short tons	19.7	43.0
34944 13	Steam traps (15 lb. w.s.p. and under)	...do	0.5	2.4
34944 15	Pop safety valves and relief valves (15 lb. w.s.p. and under)	...do	0.4	1.5
34944 19	Other metal plumbing and heating valves and specialties (15 lb. w.s.p. and under)	...do	13.2	47.2
34944 00	Plumbing and heating valves and specialties, n.s.k.	...do	(X)	7.1
34945 --	Metal fittings, flanges, and unions for piping systems, total[5]	.....	(X)	484.7
34945 11	Gray iron fittings, flanges, and unions (not for cast iron pipe)	1,000 units	86.0	39.9
	Malleable iron:			
34945 13	Fittings and flanges	...do	89.8	70.1
34945 15	Unions and union fittings	...do	15.4	17.2
	Copper, brass or bronze (used for IPS, DMV and K,L,M copper tubing sizes):			
34945 18	Cast bronze or bronze fittings, flanges, and unions	Million lbs.	77.8	87.1
34945 19	Wrought copper and wrought copper alloy fittings, flanges, and unions	...do		
34945 21	Cast carbon and alloy steel fittings, flanges, and unions	1,000 short tons	2.7	11.4
	Forged carbon and alloy steel:			
34945 23	Fittings and unions	...do	59.9	86.2
34945 25	Flanges (all types)	...do	64.9	51.4
34945 27	Fittings, butt-welding type	...do	38.1	39.3
	Pipe hangers and supports:			
34945 31	Pipe hangers and supports (not including metal framing)	.....	(X)	27.5
34945 33	Metal framing and fittings for mechanical and electrical supports	.....		
34945 98	All other metal fittings and unions for piping systems	...do	(NA)	42.5
34945 00	Metal fittings, flanges and unions for piping systems, n.s.k.	.....	(X)	12.1
34946 --	Fittings and assemblies for tubing and hose (except plumbers' brass goods), total[5 6]	.....	(X)	55.1
	Fittings and assemblies for tubing used in fluid and power transfer systems: Flared type:			
34946 11	Brass and bronze (SAE 45° and 37°)	Million lbs.	6.4	8.0
34946 13	Carbon steel (JIC 37°)	...do	4.2	9.4
34946 15	Other (including alloy steel)	...do		
	Flareless type:			
34946 21	Brass and bronze	...do	7.0	20.1
34946 23	Carbon steel	...do		
34946 25	Other (including alloy steel)	...do		
34946 31	Permanent joint (all metals)	...do		

See footnotes at end of table.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

34990 00	Fabricated metal products, n.e.c., n.s.k. (For establishments with 10 or more employees. See Note.)	.....	(X)	182.8	(X)	86.8
34990 02	Fabricated metal products, n.e.c., n.s.k. (For establishments with fewer than 10 employees. See Note.)	.....	(X)	19.8		

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands rather than rounding in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (e) From 10 to 30 percent of this figure was estimated.

[1]Annual data are published for these products in Current Industrial Reports Series MA33B "Steel Mill Products."

[2]Steel shipping packages, kegs, and pails are defined as single-walled shipping containers with a range of capacity from 1 to 12 gallons inclusive, constructed of steel sheet of 29 gauge and heavier. This definition does not include tin cans (packers' cans, general line cans, and beer cans), terneplate oil containers, fluid milk shipping containers, ice cream cans, gas cylinders, beer barrels, reconditioned barrels and drums, or containers not commercially usable in the transportation of commodities.

[3]Steel shipping barrels and drums are defined as single-walled cylindrical or bilged shipping containers, with a range of capacity from 12 to 132 gallons, constructed of steel. This definition does not include tin cans (packers' cans, general line cans, and beer cans), terneplate oil containers, high and low pressure gas steel cylinders, fluid milk shipping containers, ice cream cans, or containers not commercially usable in the transportation of commodities.

[4]Safes and vaults are shown as fire-resistive or burglary resistive, depending on the primary purpose for which they are built.

[5]The definitions of the product classes in this industry were changed significantly in 1967 from those used in 1966 and earlier years and, therefore, comparable data are not available.

[6]Includes only the value of fittings and assemblies for tubing and hose reported as such. Furthermore, it represents principally fittings and assemblies reported by establishments classified in the Valves and Pipe Fittings Industry. An indeterminate amount of these products have been classified by respondents as rubber hose and tubing (SIC 3069), flexible metal hose and tubing (SIC 3599), hardware hose fittings and couplings (SIC 3429), screw machine products (SIC 3451), and refrigeration machinery (SIC 3585).

[7]More detailed data are available in Current Industrial Reports Series M26F, "Converted Flexible Packaging Products." There are inconsistencies in classification between these two surveys.

[8]More detailed data on converted aluminum foil are available in Current Industrial Reports Series MA-34P, "Aluminum Foil Converted." That report contains data on poundages of aluminum foil converted by end use. However, it is not possible to precisely compare the data in this industry with data in the annual Current Industrial Report. Some of the products for which aluminum foil consumption is reported in the annual survey are produced for use by the same company to package a commodity. In such cases, the converted aluminum foil product is not included in this industry but is included as a portion of the value of the packaged commodity.

[9]Data for product code 3497034 included with product code 3497036.

[10]In 1963 product code 3498017, "Copper and Copper-base Alloy" was included with product code 3498019, "All other nonferrous fabricated pipe and pipe fittings.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments	
	1967	1963

Arkansas	3.2	(1)
Louisiana	4.1	(1)
Oklahoma	9.3	3.1
Texas	15.4	9.5
West Region	126.2	60.6
Mountain Div.	21.4	13.1
Colorado	16.0	(1)
Arizona	4.4	1.2
Pacific Div.	104.8	47.5
Oregon	3.1	1.4
California	100.7	44.8

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

TABLE 6C. Product Classes–Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

(In millions of dollars)

Code	Product class	1967	1966[1]	1965[1]	1964[1]	1963	1958	1954	1947
3481	Miscellaneous fabricated wire products	1,833.3	1,821.0	1,690.6	1,488.0	1,399.3	1,164.2	982.7	(NA)
34811 33151	Noninsulated ferrous wire rope, cable etc	246.0	253.1	240.8	203.7	189.9	163.4	142.9	128.3

34940	Valves and fittings, n.s.k	99.9	(67.2)	(43.4)	24.7	26.5	20.3	4.5	9.0
34960	Collapsible tubes	50.9	53.6	50.7	45.7	44.2	37.2	34.1	23.8
34970	Metal foil and leaf	385.6	367.7	354.1	351.8	329.9	145.5	128.4	66.5
34980	Fabricated pipe and fittings	486.3	454.6	348.0	313.0	286.5	265.4	214.1	110.0
34990	Fabricated metal products, n.e.c	1,172.9	1,126.1	960.0	856.3	753.4	443.6	364.8	107.9

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

(See Appendix, Explanation of Terms)

Code	Material	Unit of measure	1967 Quantity	1967 Delivered cost (million dollars)	1963 Quantity	1963 Delivered cost (million dollars)

970099	All other materials and components, parts, containers, and supplies consumed	.....	(X)	143.0	(X)	81.8
976000	Materials, containers, supplies, n.s.k.[4]	.....	(X)	54.1	(X)	50.8

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures are understated by $5 million or less because of apparent undercoverage of carbon steel pipe and tube.

[2]Included with material code 970099 "All other materials, components, etc."

[3]No data are available on the quantities of castings or forgings produced and consumed in the same establishment.

[4]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967 this includes estimates for companies that were not mailed report forms.

[5]The figures for castings produced and consumed in the same establishment are: iron castings, 229.7 thousand short tons in 1967 and 258.4 thousand short tons in 1963; steel castings, 9.9 thousand short tons in 1967 and 6.0 thousand short tons in 1963; copper and copper-base alloy castings, 119.6 million pounds in 1967, and 122.9 million pounds in 1963. Data for aluminum and aluminum-base alloy castings are not available.

[6]In 1967, the figure for iron and steel forgings produced and consumed by the same establishment was 20.5 thousand short tons. No comparable data for 1963 are available.

[7]Data on total consumption of aluminum foil are available, by end-use in Current Industrial Reports Series MA-34P, "Aluminum Foil Converted." The data in the Current Industrial Report include consumption by all establishments such as foil mills, foil converters, and others including food processing and other establishments converting foil for purposes of packaging a product. Data in this report are limited to establishments classified in the metal foil and leaf industry.

[8]Included with material code 331019 "All other carbon steel mill shapes and forms." The value for this item is less than $2.5 million.

[9]These figures are understated by $15.0 million or less because of apparent undercoverage of carbon steel pipe and tube.

[10]These figures are understated by $10 million or less because of apparent undercoverage of carbon steel pipe and tube.

TABLE 7B. Fuels and Electric Energy Consumed: 1967

(See Appendix, Explanation of Terms)

Code	Item	Unit of measure	Miscellaneous fabricated wire products (SIC 3481)	Valves and pipe fittings (SIC 3494)	Fabricated metal products, n.e.c. (SIC 3499)

	Fuels, n.s.k.....	Million dollars..	3.3	1.9	3.3
	Purchased electric energy:				
	Quantity.....	Million kw.-hrs..	451.7	997.6	404.7
	Cost.....	Million dollars..	9.4	13.1	5.9
	Quantity of electric energy generated less quantity sold.....	Million kw.-hrs..	-	3.9	8.5
	Total energy used for heat and power[1].....	Million kw-hrs. equivalent.....	2,275.7	5,973.7	1,054.0

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Man-hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Witheld to avoid disclosing figures for individual companies.

TABLE 9. Establishments and Production Workers for Selected Metalworking Operations: 1967

(To be published in a separate subject chapter titled "Selected Metalworking Operations")

Machinery, Except Electrical

35A Engines and turbines and farm machinery and equipment

35B Construction, mining, and materials handling machinery and equipment

35C Metalworking machinery and equipment

35D Special industry machinery, except metalworking machinery

35E General industrial machinery and equipment

35F Office, computing, and accounting machines

35G Service industry machines and machine shops

This major group includes establishments primarily engaged in producing a wide variety of machinery and equipment items. The industries included in this major group encompass the whole range of industrial machinery, other than electrical. To a considerable extent, the products fall into the producers' heavy equipment category, are frequently of a complex character, and are produced both to individual order and as standard items. Industries in groups 351 to 358 are defined in terms of end products, and the parts, attachments, and accessories for these items are included in the industry of this end product unless specifically classified elsewhere in the Standard Industrial Classification. The volume of shipments of machinery parts and accessories in some industries constitutes a significant portion of total shipments. These parts producers are generally smaller establishments but there are a large number of them. Group 359, Machine Shops, includes plants producing a broad variety of miscellaneous parts made by job machine shops.

Group 352 includes farm machines and wheel-tractors, while group 353 comprises all types of earth-moving equipment, including tracklaying tractors and contractors' off-highway type tractors, mining machinery, and materials-handling equipment. The end products of plants in groups 351 to 356 are usually capital equipment, bought and used, not only by manufacturing companies but also at mines, farms, and in transportation, construction and commerce. Groups 357 and 358 include products for commercial and service use such as measuring and dispensing pumps, office and store machines, and commercial refrigeration equipment.

Plants primarily engaged in rebuilding machinery or equipment on a factory basis were formerly included in this major group. However, such rebuilding activities are now classified according to the original industry classification of the product being rebuilt. Plants primarily rebuilding automotive parts are included in Major Group 37. Plants primarily rebuilding machine tools, metalworking machinery, and office and store machines are included in the industry of the plants producing the original equipment. Table 6A for each industry will show the industries in which rebuilding activities are included with the volume of such rebuilding.

The individual establishments within Major Group 35 frequently produce products falling into two or more SIC 4-digit industries. In fact, many of the larger establishments produce a significant amount of products secondary to the industry in which they are classified. These

secondary products however, tend to be similar to the primary products of the establishment in the material used in their manufacture, type of labor employed to produce them, and nature of the processes involved in the production line.

Establishments in this group of industries typically maintain machine shops, tool and die rooms, and heat-treating facilities. Frequently the establishment, particularly if it is of some size, will also operate a pattern shop, screw-machine department, and stamping facility. With greater variation depending upon the particular 4-digit industry, the physical plant may contain a foundry, forge shop, plate fabrication, electroplating, galvanizing, or other metal processing department. Data on the number of establishments engaged in a selected number of the more important of these operations and the number of employees working in the operations are shown in table 9 for each of the 4-digit industries in this major group. The metalworking operations shown in that table do not represent, of course, a complete list or, for many metal fabricating industries, even those which are most important. There are a number of significant activities such as assembly, subassembly, finishing, etc., which were covered only for selected industries.

Although the production processes in this area adhere to a general pattern of specified metalworking and metal fabricating operations, there is a substantial variation in the number and types of processes performed by an individual establishment as well as from industry to industry. Within a single 4-digit industry, certain establishments may be exclusively engaged in assembling component parts produced by other plants. Another group of plants may purchase rough castings or mill shapes and carry out the entire fabricating of the metal until it emerges as a finished product. In other instances, the casting of the metal will be performed by the establishment itself.

TABLE 1. General Statistics: 1967 and Earlier Years

(See Appendix, Explanation of Terms)

Year and item	Establishments		All employees [1]		Production workers			Value added by manufacture [2]	Cost of materials [3]	Value of shipments [3]	Capital expenditures, new [4]
	Total (number)	With 20 employees or more (number)	Total (1 000)	Payroll (million dollars)	Total (1 000)	Man-hours (million dollars)	Wages (million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)
ALL MANUFACTURING ESTABLISHMENTS, TOTAL:

Standard Notes: Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.

[1] The figures for 1939 through 1967 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for 1937 is not known.

[2] For 1954 to 1958 represents adjusted value added. For 1953 and earlier years represents unadjusted value added. See text for more detailed explanation.

[3] The total value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry classification. For a more complete explanation, see Introduction.

[4] The figures for 1958 to 1967 include expenditures for plants under construction and not yet in operation.

[5] Data for number of employees at manufacturers' central administrative offices and auxiliary units are shown in this table for 1954, 1958, 1963, and 1967, and for 1949 to 1953 in annual survey of manufactures volumes. Data for such employees are not available for 1955 to 1957, 1959 to 1962, and 1964 to 1966, and for the years prior to 1949.

[6] These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

[7] The figures for 1939 to 1967 are not entirely comparable with those for 1937 because the 1937 figures (a) include data for establishments primarily engaged in the manufacture of thermostats and gauges, heat treating of steel, machine knives, and tackle blocks, and (b) exclude data for establishments primarily engaged in the manufacture of vacuum cleaners, turbo-generators and water-wheel generator sets, hair clippers for animal use, brooders, nonferrous bearings, certain industrial furnaces and ovens, time-stamps and time-recording machines, dictating machines, certain valves and fittings (except plumbers') and caulking guns. Value added by manufacture for 1939 on a basis strictly comparable with 1937 was $1,989.6 million.

[8] The figures prior to 1937 are not sufficiently comparable to those for later years to be shown in this table principally because they include data for establishments primarily engaged in the manufacture of aircraft engines and in machine shop repairs.

TABLE 2. General Statistics, by Geographic Areas: 1967 and 1963

(See Appendix, Explanation of Terms)

Code	Industry and geographic area[1]	1967											1963	
		Establishments		All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials[2] (million dollars)	Value of shipments[2] (million dollars)	Capital expenditures, new (million dollars)	All employees (1,000)	Value added by manufacture (million dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.
[1]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

ENGINES AND TURBINES AND FARM MACHINERY AND EQUIPMENT

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3511--Steam Engines; Steam, Gas, and Hydraulic Turbines; and Steam, Gas, and Hydraulic Turbine Generator Set Units
3519--Internal Combustion Engines, Not Elsewhere Classified
3522--Farm Machinery and Equipment

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3511--STEAM ENGINES: STEAM, GAS, AND HYDRAULIC TURBINES; AND STEAM, GAS, AND HYDRAULIC TURBINE GENERATOR SET UNITS

This industry comprises establishments primarily engaged in manufacturing steam engines; steam turbines; hydraulic turbines; gas turbines except aircraft; and complete steam, gas, and hydraulic turbine generator set units. Establishments primarily engaged in building or rebuilding locomotives are classified in industry 3741; and those manufacturing nonautomotive type generators which are not part of a turbine generator set in industry 3621. For a detailed list of products of industry 3511, refer to table 6A, product codes 3511113 to 3511281.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Steam Engines and Turbines Industry in 1967 totaled $1,043 million. This included shipments of steam engines and turbines (primary products), valued at $830 million, shipments of other products (secondary products) valued at $169 million, and miscellaneous receipts of $45 million.

This industry's shipments of steam engines and turbines (primary products) in 1967 represented 83 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 85 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table

8. Approximately 76 percent of the total industry shipments are represented by plants specializing in product class 35111, steam, gas and hydraulic turbines generator set units and parts.

Industry 3511 shipments of steam engines and turbines (primary products) in 1967 represented 78 percent (coverage ratio) of these products valued at $1,059 million shipped by all industries. In 1963, the coverage ratio was 82 percent. Other industries shipping steam engines and turbines (primary products) consisted mainly of industry 3722, Aircraft Engines and Engine Parts, $73 million; and industry 3729, Aircraft Equipment, $70 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3511, these establishments accounted for 0 percent of payroll and 0 percent of value added by manufacture.

3519--INTERNAL COMBUSTION ENGINES, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing diesel, semidiesel, or other internal combustion engines, not elsewhere classified, for stationery, marine, traction, and other uses. Establishments primarily engaged in manufacturing aircraft engines, including rocket engines, are classified in industry 3722, automotive engines except diesel in industry 3714, and engine generator sets in industry 3621. For a detailed list of products of industry 3519, refer to table 6A, product codes 3519100 to 3519915.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Internal Combustion Engines, N.E.C., Industry in 1967 totaled $2,093 million. This included shipments of internal combustion engines (primary products), valued at $1,813 million, shipments of other products (secondary products) valued at $213 million, and miscellaneous receipts (mainly resales) of $67 million.

This industry's shipments of internal combustion engines (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 86 percent. Secondary products shipped by this industry in 1967 included motors and generators ($50 million), and motor vehicle parts and accessories ($37 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8.

Industry 3519 shipments of internal combustion engines (primary products) in 1967 represented 83 percent (coverage ratio) of these products valued at $2,188 million shipped by all industries. In 1963, the coverage ratio was 85 percent. Other industries shipping internal combustion engines (primary products) consisted mainly of industry 3531, Construction Machinery, $113 million; and industry 3714, Motor Vehicle Parts and Accessories, $74 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other

Government agencies and the remaining statistics estimated from industry averages. For industry 3519, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3522--FARM MACHINERY AND EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing farm machinery, including equipment and wheel tractors, for use in the preparation and maintenance of the soil; planting and harvesting of the crop; preparing, on the farm, crops for market; or for use in performing other farm operations and processes. This industry includes wheel tractors, except contractors' off-highway type, which are classified in industry 3531. Establishments primarily engaged in manufacturing industrial trucks, tractors, and trailers used for handling materials in industrial plants, depots, and docks are classified in industry 3537; and farm handtools in Group 342. For a detailed list of products of industry 3522, refer to table 6A, product codes 3522100 to 3522931.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Farm Machinery Industry in 1967 totaled $4,299 million. This included shipments of farm machinery (primary products), valued at $3,826 million, shipments of other products (secondary products) valued at $319 million, and miscellaneous receipts (mainly resales) of $154 million.

This industry's shipments of farm machinery (primary products) in 1967 represented 92 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 89 percent. Secondary products shipped by this industry in 1967 included constructuon machinery ($57 million), and transportation equipment n.e.c. ($31 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 29 percent of the total industry shipments are represented by plants specializing in product class 35221,wheel tractors and attachments, and 18 percent in 35225, harvesting machinery.

Industry 3522 shipments of farm machinery (primary products) in 1967 represented 94 percent (coverage ratio) of these products valued at $4,077 million shipped by all industries. In 1963, the coverage ratio was 95 percent. Other industries shipping farm machinery (primary products) included industry 3531, Construction Machinery, $96 million; and industry 3714, Motor Vehicle Parts and Accessories,$22 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3522, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio

Note: In 1967, 1963, and 1958, the number of companies in industry 3511 was 20, 17, and 21, respectively; in industry 3519: 129, 120, and 97; industry 3522: 1,526, 1,481, and 1,389. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - Less than 250 employees
BB - 250 to 499 employees
CC - 500 to 999 employees
EE - 1,000 to 2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, "Explanation of Terms."

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under 50 thousand (or under 50 employees).

[1] The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

[2] The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

TABLE 4. General Statistics, by Employment Size of Establishment: 1967

(See Appendix, Explanation of Terms)

Item	Establishments (number)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Man-hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)	End-of-year inventories (million dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. [e] For 1967, over 30 percent of the data for this line was estimated. (X) Not applicable. (NA) Not available. (Z) Under 50 thousand (or under 50 employees).

[1] Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2] Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)
		A	B	C	D	E	F	G	H	I

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Product code	Class of products, industry and miscellaneous receipts	All industries	Steam engines and turbines (SIC 3511)	Internal combustion engines, n.e.c. (SIC 3519)	Farm machinery (SIC 3522)	Other industries

TABLE 6A-1. Quantity and Value of Shipments by All Producers: 1967 and 1963—Continued

Product code	Product	1967			1963		
		Production for all purposes	Total shipments, including interplant transfers		Production for all purposes	Total shipments, including interplant transfers	
			Quantity	Value		Quantity	Value
		(1,000 units)	(1,000 units)	(million dollars)	(1,000 units)	(1,000 units)	(million dollars)
3522- --	FARM MACHINERY--Continued						
35227 --	Lawnmowers and snow blowers--Continued						
35227 61	Snow blowers and snow throwers, single purpose residential only (excluding large commercial type units)	235.9	241.7	34.1			
35227 81	Other, including gang-cutting units, sickle-bar mowers shipped as complete units, lawn edgers, and special cutting units	(X)	(X)	19.3	(X)	(X)	[11]57.7
35227 91	Attachments for lawnmowers, snow blowers, and similar equipment.	(X)	(X)	19.3			
35227 00	Lawnmowers and snow blowers, n.e.c.	(X)	(X)	11.6	(X)	(X)	4.6
35228 --	All other farm machinery and equipment, total	(X)	(X)	403.9	(X)	(X)	([10])
	Products included in the census of manufactures:						
35228 10, 20, 30, 40, 50	As reported in the census of manufactures[3]	(X)	(X)	291.9	(X)	(X)	([10])
	As reported on the Census annual Form MA-35A[3]	(X)	(X)	310.2	(X)	(X)	([10])
35228 87	Hedge trimmers and shears, power	(X)	700.5	10.3	(X)	113.4	3.0
35228 61	Windmill heads and windmill towers	(X)	(X)	90.8	(X)	(X)	2.3
35228 98	Other farm machines, equipment and attachments				(X)	(X)	132.2
35228 00	All other farm machinery and equipment, n.s.k.	(X)	(X)	10.9	(X)	(X)	13.0
35229 --	Parts for farm machinery and equipment, for sale separately, total.	(X)	(X)	554.7			
	Products included in the census of manufactures and on Form MA-35A:						
35229 41, 51, 61, 71, 98	As reported in the census of manufactures[3]	(X)	(X)	175.1			
	As reported on the Census annual Form MA-35A[3]	(X)	(X)	164.4			
	Replacement and repair parts for wheel tractors:				(X)	(X)	([8])
35229 25	As reported in the census of manufactures[3]	(X)	(X)	169.2			
	As reported on the Census annual Form MA-35T[3]	(X)	(X)	178.9			
	Parts sold to plants producing farm equipment (original equipment):						
35229 11	Parts for farm machinery (except wheel tractors)	(X)	(X)	75.9			
35229 21	Parts for wheel tractors	(X)	(X)	97.9			
35229 31	Replacement and repair parts for lawnmowers and snow blowers	(X)	(X)	25.2			
35229 00	Parts for farm machinery and equipment, for sale separately, n.s.k.	(X)	(X)	11.4			
35220 00	Farm machinery, n.s.k. (For companies with 10 or more employees. See Note.)	(X)	(X)	130.0	(X)	(X)	71.5
35220 02	Farm machinery, n.s.k. (For companies with less than 10 employees. See Note.)	(X)	(X)	26.6			

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Data for product classes 3511, "steam, gas, and hydraulic turbine generator set units and parts" and 35112, "steam, gas, and hydraulic turbines and parts" are combined for 1963.

[2]1963 data for hydraulic turbines and parts and accessories for hydraulic turbines are included with hydraulic turbine generator sets, gas turbine generator sets and parts for generator set units.

[3]For these products, data were also collected in the census annual commodity survey program. In lieu of asking for detailed statistics on these products in the census of manufactures, respondents were asked to report only value of shipments for specified products or classes of products for which separate figures had previously been collected on the annual form. In most cases, the value figures reported in the census of manufactures for each product or class of products agreed closely with the corresponding figures reported in the annual survey. However, there were some differences between the census figures and the annual survey figures. These variations were due primarily to the following reasons:

a. Use of different reporting periods (calendar year vs. fiscal year).
b. Use of different bases for reporting value (company sales vs. factory production).
c. Use of estimates in reporting data on the annual survey whereas census of manufactures figures generally represent more exact shipments figures.

See tables 6A-2 to 6A-8 for detailed product data.

[4]1967 data on Census annual form MA-35L include basic engines (short block engines), primarily automotive type, shipped for conversion to marine or other nonautomotive uses. Such automotive gasoline engines are included with automotive parts and accessories (product class 37141) in the 1967 Census of Manufactures. Engines after conversion to nonautomotive uses are included in product class 35197.

[5]Product codes 3519100, "gasoline engines under 11 hp., etc." and 3519200, "gasoline engines, 11 hp. and over, etc." are combined.

[6]For 1967, dual-fuel engines are included with diesel engines. For 1963, dual-fuel engines are included in product class 35197.

[7]Includes engines converted from purchased engines or from engines received from another plant of the same company.

[8]In 1963, parts were included with the individual product classes, whereas, in 1967 parts are included in a separate product class, 35229.

[9]Includes parts valued at $65.2 which were sold to plants producing wheel tractors.

[10]1963 data for product class 35228 are included with product class 35222.

[11]Includes parts for lawnmowers.

TABLE 6A-2. Gasoline Engines (35191 and 35192), by Horsepower Rating: 1967 and 1963

Source: Current Industrial Reports Series M35L, Internal Combustion Engines.

Note: Engines shipped for conversion are reported on the basis of the end application after conversion.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not applicable. (D) Withheld to avoid disclosing figures for individual companies.

[1]Represents total number of engines shipped or produced and incorporated into products at the same establishment.

[2]These values are limited to engines shipped to other companies and therefore differ from values shown in tables which also include the values for engines shipped as interplant transfers.

[3]Includes number of engines transferred to other plants of the same company and the number of engines produced and incorporated (in the same plant) into products such as construction machinery; farm machinery; tractors; engine generator sets; and other products.

[4]Data for gasoline engines with construction applications are included with generator set applications.

[5]It is likely that these figures are understated since shipments of gas and/or gasoline engine driven generator sets totaled 137,328 for 1967 and 54,765 for 1963. Diesel driven units totaled 14,664 for 1967 and 8,791 for 1963. Some engines for eventual use in generator sets have apparently been reported as General industrial. Also there may be some engines produced and incorporated into generator sets in the same establishment, by manufacturers of these sets, that are not being reported in the MA-35L survey.

[6]85 to 95 percent of these engines were reported for use on lawn and garden equipment, etc.

[7]Less than 5 percent of these engines produced were reported as tractors, not specified by kind.

[8]Over 90 percent of these engines were reported for general industrial use.

[9]For 1967 included a total of 73 dual-fuel engines produced, of which 32 valued at $6.8 million were shipped. Comparable figures for 1963 are 71 engines produced, of which 28 valued at $3.1 million were shipped.

[10]In 1967, 84,694 automotive diesel engines valued at $234 million were shipped. Comparable figures for 1963 are 63,149 engines valued at $165 million.

[11]Data for a few engines shipped as interplant transfers have been included with shipments to other companies to avoid disclosing figures for individual companies.

35223 17	Mounted	12	55,054	27,987	(D)	(D)	(D)	(D)
35223 20	Corn and cotton planters (drawn and mounted)							
35223 30	Listers and lister planting attachment units							
35223 35	Potato planters, drawn or mounted	6	2,707	2,054	(D)	(D)	(D)	(D)
35223 41	Transplanters, drawn or mounted	9	11,382	2,124	(D)	(D)	(D)	(D)
35223 44	Grain drills, including legume planters	8	(D)	(D)	(D)	(D)	(D)	(D)
35223 49	Broadcast seeders (end-gate, mounted and drawn)	7	22,762	1,039	(D)	(D)	(D)	(D)
	Fertilizer distributors, drawn or mounted: Dry (including lime spreaders): Gravity distribution:							
35223 50	Drawn (5 feet and over)	21	7,936	3,787	7,329	3,625	607	162
35223 53	Mounted (5 feet and over)	7	1,631	446	(D)	(D)	(D)	(D)
35223 51	Centrifugal distribution	18	10,418	9,113	10,134	8,974	284	139
35223 52	Liquid	9	3,311	2,373	3,119	2,269	192	104
35223 54	Anhydrous ammonia	8	(D)	(D)	(D)	(D)	(D)	(D)
	Manure spreaders, conveyor type (ASAE rating): Power-take-off (single beater):							
35223 55	Under 130 bushel capacity	9	6,479	2,890	6,288	2,783	191	107
35223 56	130 and under 200 bushel capacity							
35223 59	200 and over bushel capacity	18	16,468	10,573	14,310	8,992	2,158	1,581
	Power-take-off (multiple beater):							
35223 64	Under 130 bushel capacity	7	4,419	3,951	3,259	3,138	1,160	813
35223 65	130 and under 200 bushel capacity							
35233 66	200 and over bushel capacity	7	1,074	1,303	(D)	(D)	(D)	(D)
35223 63	Ground drive	3	2,641	1,179	2,402	1,071	239	108
	Manure spreaders, tank-type:							
35223 67	Open tank (flail unloading)							
35223 68	Closed tank (for liquids only)	9	7,991	11,326	7,811	11,151	180	175
35223 70	Front and rear mounted loaders (farm type), manure and general utility (except beet and sugar cane loaders)	24	35,078	16,240	30,050	13,918	5,028	2,322
35223 77	Row crop unit planter attachments (quantity in number of rows)	7	37,803	4,722	35,397	4,452	2,406	270
35223 81	Other planting, seeding, and fertilizing machinery	37	(X)	8,385	(X)	8,048	(X)	337
35223 84	Attachments	29	(X)	21,978	(X)	20,169	(X)	1,809
35229 30	Parts (replacement units only)	47	(X)	17,827	(X)	17,011	(X)	816
35224 pt.	HARROWS, ROLLERS, PULVERIZERS, STALK CUTTERS, AND SIMILAR EQUIPMENT, TOTAL	(NA)	(X)	179,625	(X)	168,585	(X)	11,040
	Harrows:							
35224 01	Spike-tooth harrow sections	24	147,767	4,930	145,194	4,843	2,573	87
35224 02	Spring-tooth harrow sections	21	64,253	5,491	62,077	5,346	2,176	145
35224 03	Tine-tooth harrow sections	7	27,219	957	(D)	(D)	(D)	(D)

See footnotes at end of table.

TABLE 6A-8. Farm Machines and Equipment: 1967 and 1963—Continued

1967 Census product code	Type of farm equipment	1967						
		Number of companies	Shipments					
			Total		Domestic		Export	
			Quantity (number)	Value ($1,000)	Quantity (number)	Value ($1,000)	Quantity (number)	Value ($1,000)
	HARROWS ROLLERS, PULVERIZERS, STALK CUTTERS, AND SIMILAR EQUIPMENT--Continued							
	Harrows--Continued							
	Disc harrows:							
	Single (2 gang):							
35224 04	Drawn	10	2,080	376	(D)	(D)	(D)	(D)
35224 05	Mounted	11	5,005	2,214	4,825	2,172	180	42
	Tandem (4-gang):							
	Drawn:							
	Wheel-type:							
35224 06	Under 15 ft. width of cut	25	54,982	36,402	50,501	33,528	4,481	2,874
35224 07	15 ft. width of cut and over	10	18,925	19,536	17,112	18,008	1,813	1,528
35224 08	Other	10	11,179	2,446	(D)	(D)	(D)	(D)
35224 09	Mounted	21	12,348	3,356	11,743	3,167	605	189
	Offset:							
	Drawn:

TABLE 6A-8. Farm Machines and Equipment : 1967 and 1963—Continued

1967 Census product code	Type of farm equipment	1967						
		Number of companies	Shipments					
			Total		Domestic		Export	
			Quantity (number)	Value ($1,000)	Quantity (number)	Value ($1,000)	Quantity (number)	Value ($1,000)
32222 pt.	FARM DAIRY MACHINES AND EQUIPMENT, TOTAL	(NA)	(X)	34,170	(X)	30,300	(X)	3,870
	Mechanical installations:							
35222 03	Pumping outfits - stationary and portable	10	16,503	3,941	(D)	(D)	(D)	(D)
	Pail-type milking machines:							
35222 05	Suspended units	10	10,624	889	6,647	576	3,977	313
35222 06	Floor type (single unit)							
35222 07	Floor type (double unti)							
35222 08	Pipeline milker units (individual clusters)	9	(S)	7,932	(S)	7,616	(S)	316
35222 15	Other farm dairy machines and equipment	11	(X)	2,848	(X)	(D)	(X)	(D)
35222 16	Attachments	9	(X)	18,560	(X)	15,649	(X)	2,911
35229 70	Parts (replacement units only)							
35222 pt.	SPRAYERS AND DUSTERS, TOTAL	(NA)	(X)	55,809	(X)	52,146	(X)	3,663
	Power sprayers (except aircraft sprayers and dusters):							
35222 18	Self-propelled	9	1,689	5,750	(D)	(D)	(D)	(D)
	Not self-propelled:							
	Air-carried type:							
	Blower attachments:							
35222 19	For orchard use	7	236	355	(D)	(D)	(D)	(D)
35222 21	For other use							
	Complete units:							
35222 22	For orchard use	13	1,009	4,099	987	4,019	22	80
35222 23	For field and row crop use	13	5,757	2,143	(D)	(D)	(D)	(D)
35222 24	For other uses							
	Other than air-carried type:							
	Complete units-pump, tank or barrel mount, discharge equipment with or without trailer or skids (except wheel-mounted hand-pulled):							
	Plunger-type pump sprayers:							
	Under 8 g.p.m. discharge:							
35222 25	Engine driven	12	2,941	996	2,505	889	436	107
	Tractor power-take-off driven:							
35222 26	Pump mounted directly on tractor power-take-off shaft	12	6,672	1,414	(D)	(D)	(D)	(D)
35222 27	Pump mounted other than on tractor power-take-off shaft	5	1,054	443	(D)	(D)	(D)	(D)
	8 g.p.m. discharge and over:							
35222 28	Engine driven	9	1,956	1,836	1,854	1,767	102	69
	Tractor power-take-off driven:							
35222 29	Pump mounted directly on tractor power-take-off shaft	14	5,776	1,475	(D)	(D)	(D)	(D)
35222 31	Pump mounted other than on tractor power-take-off shaft	9	1,311	1,219	(D)	(D)	(D)	(D)
	Other than plunger-type pump sprayers (roller, gear, etc.):							
35222 32	Engine driven	4	455	234	(D)	(D)	(D)	(D)
	Tractor power-take-off driven:							
35222 33	Pump mounted directly on tractor power-take-off shaft	25	23,591	5,314	23,059	5,208	532	106
35222 34	Pump mounted other than on tractor power-take-off shaft							
	Wheel-mounted, hand-pulled type:							
35222 37	Tank of 16 gallons capacity and under	6	8,048	806	7,595	756	453	50
35222 38	Tank of over 16 gallons capacity	8	1,821	340	(D)	(D)	(D)	(D)
	Hand sprayers, agricultural (except flame):							
25222 39	Under 1 gallon	6	4,216,419	2,112	3,947,739	1,978	268,680	134
	1 gallon and over:							
35222 41	Compressed air or gas	8	1,399,265	8,816	1,289,590	8,199	109,675	617
35222 42	Knapsack (liquid pump)	7	54,289	1,009	48,080	883	6,209	126
35222 43	Wheelbarrow	6	2,257	70	(D)	(D)	(D)	(D)
35222 44	Hose-end sprayers	8	1,030,909	2,146	1,027,350	2,138	3,559	8
35222 45	Flame sprayers, hand	7	20,697	285	19,957	272	740	13

See footnotes at end of table.

35229 95	Wood	9	16,775	16,289	899	16,289	899	-	-
35229 96	Other barnyard equipment	47	(X)	(X)	6,206	(X)	6,071	(X)	135
35229 97	Attachments	14	(X)	(X)	472	(X)	472	(X)	(D)
35229 98	Parts	17	(X)	(X)	1,394	(X)	1,394	(X)	(D)

Note: The Census product codes shown in parentheses associated with product groups represent those codes used in the 1967 and 1963 Census of Manufactures and correspond to those Census product codes in table 6A. Other 7-digit product codes represent those used in Current Industrial Reports M35A or M35S for 1967 and 1963.

Source: Current Industrial Reports Series M35S, Tractors (product codes 3522104-23); and Current Industrial Reports Series M35A, Farm Machinery and Equipment (product codes 3522203-3522998).

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. Data for these products are included, however in the totals. (S) Withheld because data did not meet publication standards on the basis of a consistency review.

[1]The horsepower rating for these tractors is based on the maximum observed P.T.O. horsepower.

[2]Data are limited to attachments and parts shipped by companies manufacturing complete tractors.

[3]The 1967 data for pickers-shellers (drawn, mounted, or self-propelled) and field shelling attachments for corn pickers, including conversion packages are combined with "Other harvesting machinery."

[4]Data for hay crusher or hay conditioner attachments are included in "Other attachments."

[5]Excludes pipeline milker units.

[6]Data for cream separators capacity 500 pounds or less per hour included with parts and attachments.

[7]Data for drawn corn and cotton type cultivators are combined with "Other cultivators and weeders."

[8]Respondents were requested to use the following definition: Batch driers are defined as any dryer, wherein the product to be dried is placed in the dryer, the complete drying and cooling operation performed, then the product removed, to the place of storage or further processing. The term usually refers to driers for small grain, seed, etc., which are self-contained machines comprising a drying compartment, either horizontal or vertical, to contain the product being dried while heated air is forced or drawn through it from a central portion (usually called a plenum chamber). Cooling is usually carried out in the same manner. Integral conveying equipment provides for loading and/or unloading the dryer. Also included are the fan, burner, and control system. Batch driers are usually portable, but may be stationary.

[9]Respondents were requested to use the following definition: Continous-flow driers are defined as any dryer wherein the product to be dried is in continous movement through the dryer and air movement is continous, in contrast to batch operation.

[10]Respondents were requested to use the following definition: Heated-air units are defined as basic heated-air-producing units including fan, burner system, and electrical system. It is usually coupled to drying structure by means of a flexible duct. It may have transport chassis and wheels for portability.

[11]Data for power feed carts are included with "Other farm poultry equipment."

[12]Data for hog pens are included in "Other hog equipment."

[13]Respondents were requested to use the following definition: Garden tractors are defined as tractors weighing less than 1,200 pounds (basic machines), typically powered by air-cooled engines with fewer than four cylinders and total piston displacement of under 45 cubic inches. Such tractors are further distinguished from farm tractors in that they usually carry an engine horsepower rating but not a belt horsepower rating.

[14]Data for drawn corn and cotton type cultivators included with other cultivators and weeders.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Pacific Div.	15.2	30.3
Washington	BB	3.9
Oregon	AA	2.4
California	11.0	24.0

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to &10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of terms, for discussion of items.

Standard notes: (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.
[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

TABLE 6C. Product Classes–Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

(In millions of dollars)

Code	Product class	1967	1966[1]	1965[1]	1964[1]	1963	1958	1954	1947

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, "Explanation of Terms."

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses in the value of shipments columns either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data.

[2]Data for 35195, outboard motors are included with 35197 tank and converted internal combustion engines.

[3]For years prior to 1967, parts were included with the individual product classes whereas in 1967 parts are included in a separate product class, 35229.

[4]Data for 35222, dairy machines, sprayers, elevators, and garden tractors are included with 35228, all other farm machinery and equipment.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

351901	Gasoline and other carburetor	...do	3,796.0	160.7	3,243.7	108.9

See footnotes at end of table.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963–Continued

(See Appendix, Explanation of Terms)

Code	Material	Unit of measure	1967		1963	
			Quantity	Delivered cost (million dollars)	Quantity	Delivered cost (million dollars)
	INDUSTRY 3522.--FARM MACHINERY--Continued					
	Materials, parts, containers, and supplies--Continued					
	Electric motors and generators:					
362115	Fractional horsepower electric motors (under 1 hp.) (excluding timing motors)	...do	(NA)	9.4	117.6	2.4
362120	Integral horsepower motors and generators (1 hp. and over)	...do	133.7	9.2	68.0	4.5
	Bearings:					
356218	Ball		(X)	35.7	(X)	22.1
356201	Roller		(X)	19.7	(X)	16.3
301131	Pneumatic tires	1,000	3,757.4	74.0	2,511.8	47.9
301141	Inner tubes	...do	(NA)	19.6	4,125.0	9.0
970099	All other materials and components, parts, containers, and supplies consumed		(X)	916.6	(X)	645.7
976000	Materials,[2] parts, containers, and supplies, n.s.k.		(X)	201.9	(X)	121.3

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under $50 thousand.

[1]No data are available on the quantities of castings, iron and steel forgings, or integral horsepower electric motors or generators produced and consumed in the same establishment except for 1963 for copper and copper base alloy castings (0.6 million pounds) and iron and steel forgings (0.4 thousand short tons).

[2]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967 this includes estimates for companies that were not mailed report forms.

[3]No data are available on the quantities of castings, iron and steel forgings, or integral horsepower motors and generators produced and consumed in in the same establishment except for 1963 for iron castings which totaled 38.2 thousand short tons.

[4]These figures are understated by $20 million or less because of apparent undercoverage of carbon steel pipe and tube.

[5]Included with material code 970099, "All other materials and components, etc."

[6]In addition, the following quantities were produced and consumed into products at the same establishment: For 1967, Iron castings, 301.4 thousand short tons; Aluminum and aluminum-base alloy castings, 6.0 million pounds; and Gasoline and other carburetor engines, 25.7 thousand units. Comparable data for 1963 are: Iron castings, 301.3 thousand short tons; Aluminum and aluminum-base alloy castings, 2.4 million pounds; Iron and steel forgings, 5.1 thousand short tons; Gasoline and other carburetor engines, 75.7 thousand units; and Fractional horsepower electric motors, 2.0 thousand units.

For industry 3522 no data are available for either 1967 or 1963 for the quantities of steel castings, diesel and semidiesel engines or integral horsepower motors and generators nor in 1967 for iron and steel forgings or fractional horsepower electric motors produced and consumed in the same establishments.

TABLE 7B. Fuels and Electric Energy Consumed: 1967

(See Appendix, Explanation of Terms)

Code	Item	Unit of measure	Steam engines and turbines (SIC 3511)	Internal combustion engines, n.e.c. (SIC 3519)	Farm machinery (SIC 3522)
	Cost of purchased fuels and electric energy, total...	Million dollars.	10.3	14.5	31.8
	Cost of purchased fuels, total.....	...do.....	6.2	5.6	17.8

	Fuels, n.s.k.....	...do.....	0.1	0.7	2.3
	Purchased electric energy:				
	Quantity.....	Million kw.-hrs.	395.4	824.0	1,046.2
	Cost.....	Million dollars.	4.1	8.9	14.0
	Quantity of electric energy generated less quantity sold.....	Million kw.-hrs.	142.3	44.1	198.2
	Total energy used for heat and power[1].....	Million kw.-hrs. equivalent.....	4,545.0	3,404.6	9,908.5

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1] Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments	All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new
			Number	Payroll	Number	Man-hours	Wages				
		(number)	(1,000)	(million dollars)	(1,000)	(millions)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)
3519	INTERNAL COMBUSTION ENGINES, NEC										
	ENTIRE INDUSTRY	155	63.7	500.8	47.5	97.2	344.6	1 015.8	1 091.5	2 093.2	97.6
	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION.	128	49.8	395.1	37.2	75.7	271.3	807.3	863.6	1 672.1	79.4
35191	GASOLINE ENGINES UNDER 11 HP, EXC. AIRCRAFT, AUTO (PRIMARY PRODUCT CLASS OF ESTABLISHMENT)	5	8.3	59.5	7.5	15.0	50.5	109.5	111.9	219.1	16.2

	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION.	46	4.0	25.3	3.0	5.8	16.5	63.2	53.9	115.7	2.2
35225	HARVESTING MACHINERY (PRIMARY PRODUCT CLASS OF ESTABLISHMENT)	69	24.6	184.5	18.7	36.1	131.1	393.5	375.6	759.7	25.1
	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION.	41	16.0	124.4	12.4	24.3	91.1	272.4	272.0	537.3	15.9
35226	HAYING MACHINERY (PRIMARY PRODUCT CLASS OF ESTABLISHMENT)	21	8.2	64.8	5.6	11.1	39.9	129.0	110.4	228.9	8.5
35227	LAWNMOWERS AND SNOW BLOWERS (PRIMARY PRODUCT CLASS OF ESTABLISHMENT)	72	10.8	63.6	8.4	16.8	45.1	145.6	255.8	383.9	5.9
	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION.	54	7.2	41.3	5.8	11.5	30.5	101.2	190.2	277.0	3.3
35228	ALL OTHER FARM MACHINERY AND EQUIPMENT (PRIMARY PRODUCT CLASS OF ESTABLISHMENT)	224	13.0	78.5	9.6	19.6	49.3	168.5	176.2	341.5	8.9
	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION.	168	8.4	51.4	6.3	13.1	33.1	119.9	122.4	239.9	5.8
35229	PARTS FOR FARM MACHINERY AND EQUIPMENT (PRIMARY PRODUCT CLASS OF ESTABLISHMENT)	86	8.9	57.7	7.1	14.4	41.9	112.3	96.0	204.3	13.0
	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION.	56	5.0	33.6	4.0	8.0	23.9	66.7	45.6	108.4	8.0

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 9. Establishments and Production Workers for Selected Metalworking Operations: 1967

(To be published in a separate subject chapter titled "Selected Metalworking Operations.")

CONSTRUCTION, MINING, AND MATERIALS HANDLING MACHINERY AND EQUIPMENT

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3531--Construction Machinery and Equipment
3532--Mining Machinery and Equipment, Except Oilfield Machinery and Equipment
3533--Oilfield Machinery and Equipment
3534--Elevators and Moving Stairways
3535--Conveyors and Conveying Equipment
3536--Hoists, Industrial Cranes, and Monorail Systems
3537--Industrial Trucks, Tractors, Trailers, and Stackers

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industries.

3531--CONSTRUCTION MACHINERY AND EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing heavy machinery and equipment used by the construction industries, such as bulldozers; concrete mixers; cranes, except industrial plant; dredging machinery; pavers; and power shovels. Establishments primarily engaged in manufacturing mining equipment are classified in industry 3532, and well drilling machinery in industry 3533. For a detailed list of products of industry 3531, refer to table 6A, product codes 3531100 to 3531998.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Construction Machinery Industry in 1967 totaled $4,138 million. This included shipments of construction machinery (primary products), valued at $3,459 million, shipments of other products (secondary products) valued at $486 million, and miscellaneous receipts (mainly resales) of $193 million.

This industry's shipments of construction machinery (primary products) in 1967 represented 88 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 91 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 23 percent of the total industry shipments are represented by plants specializing in product class 35318, Scrapers, graders, rollers, and off-highway trucks, trailers and wagons (excluding parts); and 20 percent in 35312, Tracklaying type tractors, except parts and attachments.

Industry 3531 shipments of construction machinery (primary products) in 1967 represented 92 percent (coverage ratio) of these products valued at $3,767 million shipped by all industries. In 1963, the coverage ratio was 89 percent. Other industries shipping construction machinery (primary products) included industry 3522, Farm Machinery, $57 million; and industry 3711, Motor Vehicles, $43 million.

3532--MINING MACHINERY AND EQUIPMENT, EXCEPT OILFIELD MACHINERY AND EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing heavy machinery and equipment used by the mining industries, such as coal breakers, mine cars, mineral cleaning machinery, concentration machinery, core drills, coal cutters, portable rock drills, and rock crushing machinery. Establishments primarily engaged in manufacturing construction machinery are classified in industry 3531; well drilling machinery in industry 3533; and coal and ore conveyors in industry 3535. For a detailed list of products of industry 3532, refer to table 6A, product codes 3532100 to 3532475.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Mining Machinery Industry in 1967 totaled $622 million. This included shipments of mining machinery (primary products), valued at $428 million, shipments of other products (secondary products) valued at $121 million, and miscellaneous receipts (mainly resales) of $74 million.

This industry's shipments of mining machinery (primary products) in 1967 represented 78 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 75 percent. Secondary products shipped by this industry in 1967 included construction machinery (SIC 3531) ($32 million), and conveyors and conveying equipment (SIC 3535) ($18 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 56 percent of the total industry shipments are represented by plants specializing in product class 35324, Parts and attachments for mining machinery and equipment and 25 percent in 35321, Underground mining and mineral benefication machinery and equipment.

Industry 3532 shipments of mining machinery (primary products) in 1967 represented 82 percent (coverage ratio) of these products valued at $522 million shipped by all industries. In 1963, the coverage ratio was also 82 percent.

3533--OILFIELD MACHINERY AND EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing machinery and equipment for use in oil and gas fields, or for drilling water wells. For a detailed list of products of industry 3533, refer to table 6A, product codes 3533111 to 3533431.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Oilfield Machinery Industry in 1967 totaled $800 million. This included shipments of oilfield machinery (primary products), valued at $605 million, shipments of other products (secondary products) valued at $104 million, and miscellaneous receipts of $91 million.

This industry's shipments of mining machinery (primary products) in 1967 represented 85 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 90 percent. Secondary products shipped by this industry in 1967 included pumps and compressors (SIC 3561) ($23 million), and construction machinery (SIC 3531) ($17 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 38 percent of the total industry shipments are represented by plants specializing in product class 35333, Oil and gas field production machinery and equipment (except pumps); and 35 percent in 35331, Rotary oil and gas field drilling machinery and equipment.

Industry 3533 shipments of oilfield machinery (primary products) in 1967 represented 92 percent (coverage ratio) of these products valued at $661 million shipped by all industries. In 1963, the coverage ratio was 91 percent. Other industries shipping oilfield machinery (primary products) included industry 3561, Pumps and Compressors, $10 million.

3534--ELEVATORS AND MOVING STAIRWAYS

This industry comprises establishments primarily engaged in manufacturing passenger or freight elevators, automobile lifts, dumb waiters, and moving stairways. Establishments primarily engaged in manufacturing commercial conveyors systems and equipment are classified in industry 3535, and farm elevators in industry 3522. For a detailed list of products of industry 3534, refer to table 6A, product codes 3534011 to 3534097.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Elevators and Moving Stairways Industry in 1967 totaled $320 million. This included shipments of elevators and moving stairways (primary products), valued at $280 million, shipments of other products (secondary products) valued at $17 million, and miscellaneous receipts of $23 million.

This industry's shipments of elevators and moving stairways (primary products) in 1967 represented 94 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 97 percent.

Industry 3534 shipments of elevators and moving stairways (primary products) in 1967 represented 95 percent (coverage ratio) of these products valued at $296 million shipped by all industries. In 1963, the coverage ratio was also 95 percent. Other industries shipping elevators and moving stairways (primary products) included industry 3586, Measuring and Dispensing Pumps, $6 million.

3535--CONVEYORS AND CONVEYING EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing conveyors and conveying equipment for installation in factories, warehouses, mines, and other industrial and commercial establishments. Establishments primarily engaged in manufacturing passenger or freight elevators, dumb waiters, and moving stairways are classified in industry 3534; and overhead traveling cranes and monorail systems in industry 3536. For a detailed list of products of industry 3535, refer to table 6A, product codes 3535111 to 3535211.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Conveyors and Conveying Equipment Industry in 1967 totaled $763 million. This included shipments of conveyors and conveying equipment (primary products), valued at $545 million, shipments of other products (secondary products) valued at $98 million, and miscellaneous receipts (mainly resales) of $120 million.

This industry's shipments of conveyors and conveying equipment (primary products) in 1967 represented 85 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 82 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 84 percent of the total industry shipments are represented by plants specializing in product class 35351, Conveyors and conveying equipment (except hoists and farm elevators).

Industry 3535 shipments of conveyors and conveying equipment (primary products) in 1967 represented 83 percent (coverage ratio) of these products valued at $655 million shipped by all industries. In 1963, the coverage ratio was also 83 percent. Other industries shipping conveyors and conveying equipment (primary products) included industry 3566, Power Transmission Equipment, $23 million; industry 3532, Mining Machinery, $18 million; and industry 3531, Construction Machinery, $17 million.

3535--HOISTS, INDUSTRIAL CRANES, AND MONORAIL SYSTEMS

This industry comprises establishments primarily engaged in manufacturing overhead traveling cranes, hoists, and monorail systems for installation in factories, warehouses, and other industrial and commercial establishments. For a detailed list of products of industry 3536, refer to table 6A, product codes 3536112 to 3536255.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Hoists, Cranes, and Monorails Industry in 1967 totaled $444 million. This included shipments of hoists, cranes, and monorails (primary products), valued at $320 million, shipments of other products (secondary products) valued at $90 million, and miscellaneous receipts of $34 million.

This industry's shipments of hoits, cranes, and monorails (primary products) in 1967 represented 78 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 80 percent. Secondary products shipped by this industry in 1967 included construction machinery (SIC 3531) ($35 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 73 percent of the total industry shipments are represented by plants specializing in product class 35362, Overhead traveling cranes and monorail systems; and 23 percent in 35361, Hoists.

Industry 3536 shipments of hoists, cranes, and monorails (primary products) in 1967 represented 83 percent (coverage ratio) of these products valued at $385 million shipped by all industries. In 1963, the coverage ratio was 70 percent. Other industries shipping hoists, cranes, and monorails (primary products) included industry 3531, Construction Machinery, $13 million; industry 3532, Mining Machinery, $9 million; and industry 3713, Truck and Bus Bodies, $8 million.

3537--INDUSTRIAL TRUCKS, TRACTORS, TRAILERS, AND STACKERS

The Industrial Trucks, Tractors, Trailers, and Stackers Industry includes establishments primarily engaged in manufacturing industrial trucks, tractors, trailers, stackers (truck-type), and related equipment, used for handling materials on floors and paved surfaces in and around industrial and commercial plants, depots, docks, and terminals. Establishments primarily engaged in manufacturing motor vehicles and motor vehicle-type trailers are classified in Group 371; farm-type wheel tractors in industry 3522; wheel tractor shovel loaders and tracklaying tractors in industry 3531; and wood pallets and skids in industry 2499. For a detailed list of products of industry 3537, refer to table 6A, product codes 3537011 to 3537081.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Industrial Trucks and Tractors Industry in 1967 totaled $778 million. This included shipments of industrial trucks and tractors (primary products), valued at $672 million, shipments of other products (secondary products) valued at $50 million, and miscellaneous receipts (mainly resales) of $56 million.

This industry's shipments of industrial trucks and tractors (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 90 percent. Secondary products shipped by this industry in 1967 included construction machinery (SIC 3531) ($17 million).

Industry 3537 shipments of industrial trucks and tractors (primary products) in 1967 represented 86 percent (coverage ratio) of these products valued at $781 million shipped by all industries. In 1963, the coverage ratio was 81 percent. Other industries shipping industrial trucks and tractors (primary products) consisted mainly of industry 3531, Construction Machinery, $42 million; industry 3522, Farm Machinery, $10 million; and industry 3714, Motor Vehicle Parts And Accessories, $10 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For each industry included in this report, these establishments accounted for less than 1 percent of payroll and value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio

Note: In 1967, 1963, and 1958, the number of companies in industry 3531 was 578, 561, and 532, respectively; in industry 3532: 197, 198, and 167; industry 3533: 309, 373, and 351; industry 3534: 130, 126, and 135; industry 3535: 416, 428, and 401; industry 3536: 139, 120, and 78; and industry 3537: 337, 304, and 254. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[3]For industry 3534, the figures for 1967 are not comparable with those for earlier years because some companies previously included construction receipts with value of shipments. Value added by manufacture and value of shipments for 1967 would have been $50 to $75 million higher had they been on a basis comparable with earlier years.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

1958 Census	5,154	65	1,898	2.37	.52	.80	7,947	65	6.48

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]For industry 3534 the figures for 1967 are not comparable with those for earlier years because some companies previously included construction receipts with value of shipments. Value added by manufacture and value of shipments for 1967 would have been $50 to $75 million higher had they been on a basis comparable with earlier years.

TABLE 2. General Statistics, by Geographic Areas: 1967 and 1963

(See Appendix, Explanation of Terms)

Industry and geographic area[1]	1967											1963

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [6]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [6]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)

[1]See table 1A, footnote 3.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Product code	Class of products, industry, and miscellaneous receipts	All industries	Construction machinery (SIC 3531)	Mining machinery (SIC 3532)	Oilfield machinery (SIC 3533)	Elevators and moving stairways (SIC 3534)	Conveyors and conveying equipment (SIC 3535)	Hoists, cranes, and monorails (SIC 3536)	Industrial trucks and tractors (SIC 3537)	Other industries

3536-	3662 Radio and TV communication equipment	(over 2)
3536-	3713 Truck and bus bodies	8.0
3537-	3315 Steel wire and related products	(over 2)
3537-	3429 Hardware, n.e.c	2.6
3537-	3449 Miscellaneous metalwork	4.4
3537-	3522 Farm machinery	10.2
3537-	3713 Truck and bus bodies	(over 2)
3537-	3714 Motor vehicle parts and accessories	10.0

Note: Data shown parenthetically are ranges expressed in millions of dollars. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under 50 thousand (or under 50 employees).

[1] Includes, where appropriate, values for those 4-digit product groups for which either the symbol "D" or a value range, e.g. (2-5), (under 2), etc. appear above.

[2] See table 1A, footnote 3.

TABLE 6A-1. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Total shipments including interplant transfers			
		1967		1963	
		Quantity (1,000 units)	Value (million dollars)	Quantity (1,000 units)	Value (million dollars)
3531- --	CONSTRUCTION MACHINERY, TOTAL	(X)	3,766.6	(X)	2,624.2
35311 --	Contractors' off-highway wheel tractors, except parts and attachments:				
	As reported in the census of manufactures[1,2]	(X)	132.3	(X)	102.7
	As reported on Census annual Form MA-35D[1,2]	(X)	118.2	(X)	101.0
35312 --	Tracklaying type tractors, except parts and attachments:				
	As reported in the census of manufactures[1]	(X)	389.9	(X)	317.4
	As reported on Census annual Form MA-35T[1]	(X)	377.8	(X)	314.4
35313 --	Parts and attachments for tracklaying tractors, contractors' off-highway wheel tractors, and tractor shovel loaders, total	(X)	604.2	(X)	[3]395.6
	Parts (for replacement and repair) and attachments for tracklaying type:				
	Tractors, and tracklaying tractor shovel loaders:				
35313 10, 70	As reported in the census of manufactures[1]	(X)	340.4	(X)	[3]291.6
	As reported on Census annual Form MA-35T[1]	(X)	352.5	(X)	291.5
	Parts (for replacement and repair) and attachments for contractors' off-highway wheel tractors:				
35313 65	As reported on the census of manufactures[1]	(X)	53.1	(X)	37.6
	As reported on Census annual Form MA-35D[1]	(X)	50.6	(X)	(NA)
35313 21	Parts sold to other plants producing tracklaying tractors, contractors' off-highway type wheel tractors, and tractor shovel loaders			(X)	48.2
35313 67	Parts (for replacement and repair) and attachments for wheel type tractor shovel loaders	(X)	199.5	(X)	[3]18.2
35313 00	Parts and attachments for tracklaying type tractors, contractors' off-highway wheel tractors, and tractor shovel loaders, n.s.k.	(X)	11.2	(X)	-
35314 --	Power cranes (including locomotive and full-circle revolving with booms), draglines, shovels and parts, total	(X)	656.5	(X)	464.8
	Products included in the census of manufactures and also on Census Form MQ-35D, or MA-35D:				
35314 10, 20	As reported in the census of manufactures[1]	(X)	526.4	(X)	328.2
	As reported in the Census Form M35D or MA-35D[1]	(X)	484.5	(X)	308.5
35314 81	Front end attachments, buckets, grapples, slings, etc., for power cranes, draglines, and shovels (sold separately)	(X)	18.2	(X)	15.1
35314 85	Parts for power cranes, draglines, and shovels	(X)	108.1	(X)	116.8
35314 00	Power cranes (including locomotive and full-circle revolving with booms), draglines, shovels, and parts, n.s.k.	(X)	3.8	(X)	4.6
35316 --	Mixers, pavers, and related equipment, excluding parts, total	(X)	162.3	(X)	132.0
	Products included in the census of manufactures and also on Census Form MQ-35D or MA-35D:				
35316 20, 37, 40, and 50	As reported in the census of manufactures[1]	(X)	127.5	(X)	89.1
	As reported on Census Form M35D or MA-35D[1]	(X)	112.8	(X)	87.8
35316 12	Mixers, portable, under 3-1/2 cubic foot capacity (except plaster and mortar), hand or power operated	(NA)	0.8	23.6	1.3
35316 31	Mixers, plaster and mortar	7.9	3.6	10.2	4.7
35316 34	Pavers, finishers and spreaders	8.1	14.9	10.2	19.9
35316 39	Concrete vibrators (including screeds)	30.7	5.4	22.3	4.6
35316 52	Other materials-aggregate spreaders and soil stabilization pavers	(NA)	3.7	5.3	7.8
35316 00	Mixers, pavers, and related equipment, excluding parts, n.s.k.	(X)	6.4	(X)	4.6
35317 --	Tractor shovel loaders, excluding parts and attachments, total	(X)	411.6	(X)	[3]295.3
	Tractor shovel loaders, wheel type excluding parts and attachments:				
35317 10	As reported in the census of manufactures[1]	(X)	277.0	(X)	152.1
	As reported on Census Form MQ-35D or MA-35D[1]	(X)	281.2	(X)	153.3
	Tractor shovel loaders, tracklaying type (20 net engine h.p. and over):				
35317 20	As reported in the census of manufactures[1]	(X)	134.5	(X)	[3]143.2
	As reported on Census annual Form MA-35T[1]	(X)	125.8	(X)	140.2
35318 --	Scrapers, graders, rollers, and off-highway trucks, trailers, and wagons (excluding parts):				
	As reported in the census of manufactures[1,2]	(X)	711.4	(X)	480.0
	As reported on Census Form MQ-35D or MA-35D[1,2]	(X)	657.2	(X)	451.0

See footnotes at end of table.

TABLE 6A-1. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Total shipments including interplant transfers			
		1967		1963	
		Quantity (1,000 units)	Value (million dollars)	Quantity (1,000 units)	Value (million dollars)
	CONSTRUCTION MACHINERY--Continued				
35319 --	Other construction machinery and equipment, including parts, total	(X)	613.9	(X)	403.5
	Products included in the census of manufactures and also on Census Form MQ-35D and MA-35D:				
35319 20, 30, 55, 70	As reported in the census of manufactures[1]	(X)	98.2	(X)	80.4
	As reported on Census Form M35D or MA-35D[1]	(X)	(NA)	(X)	76.4
35319 05	Four-wheel drive, skid steer, loaders	(X)	[4]	(X)	[5]
35319 11	Dredging machinery, hydraulic and other types	(X)	19.7	(X)	14.2
35319 21	Railway maintenance of way equipment (rail layers, ballast spreaders, etc.) except rail cars	(X)	26.9	(X)	22.5
35319 23	Horizontal and vertical earth augers and power post hole diggers (excluding water well and blast hole drills)	(X)	8.2	(X)	[5]
35319 52	Winches, except winches for mounting on wheel or tracklaying tractors	(NA)	41.0	36.5	22.5
35319 61	Derricks, except oil and gas well (including gallows, frames, ginpole, stiff legs and guy)	1.0	3.3	0.9	3.8
35319 71	Handheld compaction equipment (including tampers, upright and vibratory compactors, etc.)	11.0	5.9	(X)	[5]
35319 81	Snow plows (for mounting on tractors or trucks), rotary blowers, "V" and single blades and wings (attachments only)	(NA)	19.8	(NA)	25.1
35319 83	Other excavation and road construction machinery, drawn ditchers and trenchers, contractors' handheld air tools (other than compaction equipment), drawn rollers, as well as other types of excavating and earthmoving equipment not specified above	(X)	[4] 28.8	(X)	[5] 41.4
35319 85	Parts and attachments for construction machinery and equipment (sold separately) (except parts and attachments for power cranes, draglines, shovels, and tractors)	(X)	278.6	(X)	144.1
35319 98	All other construction machinery and equipment (complete units)	(X)	55.8	(X)	45.0
35319 00	Other construction machinery and equipment, including parts, n.s.k.	(X)	27.7	(X)	4.5
35310 00	Construction machinery and equipment, n.s.k. (For companies with 10 or more employees. See Note.)	(X)	77.6	(X)	33.2
35310 02	Construction machinery and equipment, n.s.k. (For companies with less than 10 employees. See Note.)	(X)	6.9		
3532- --	MINING MACHINERY AND EQUIPMENT, TOTAL	(X)	521.5	(X)	336.2
35321 --	Underground mining machinery and related mining equipment:				
	As reported in the census of manufactures[1]	(X)	101.4	(X)	73.6
	As reported on Census Form MA-35F[1]	(X)	92.0	(X)	71.5
35322 --	Crushing, pulverizing, and screening machinery (stationary):				
	As reported in the census of manufactures[1]	(X)	78.5	(X)	58.0
	As reported on Census Form MA-35F[1]	(X)	72.3	(X)	54.6
35323 --	All other mining machinery and equipment:				
	As reported in the census of manufactures[1]	(X)	50.1	(X)	39.3
	As reported on Census Form MA-35F[1]	(X)	46.2	(X)	38.4
35324 --	Parts and attachments for mining machinery and equipment, total	(X)	257.2	(X)	158.0
35324 25	Construction rock drills, portable, handheld, or mounted	10.6	21.8	4.8	4.9
	Percussion rock drill bits:				
35324 31	Containing tungsten carbide	(X)	20.9	(X)	13.0
35324 35	Made entirely of steel			(X)	2.4
35324 41	Other drills, tools, and supplies for drills (sold separately)	(NA)	38.7	(X)	16.2
35324 75	Other parts and attachments for mining machinery and equipment (sold separately) (excluding drills)	(X)	168.4	(X)	121.1
35324 00	Parts and attachments for mining machinery and equipment, n.s.k.	(X)	7.4	(X)	0.6
35320 00	Mining machinery and equipment, n.s.k. (For companies with ten or more employees. See Note.)	(X)	31.9	(X)	7.3
35320 02	Mining machinery and equipment, n.s.k. (For companies with less than ten employees. See Note.)	(X)	2.4		

See footnotes at end of table.

TABLE 6A-1. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Total shipments including interplant transfers			
		1967		1963	
		Quantity (number of units)	Value (million dollars)	Quantity (number of units)	Value (million dollars)
3533- --	OILFIELD MACHINERY, TOTAL	(X)	660.7	(X)	572.7
35331 --	Rotary oilfield and gas field drilling machinery and equipment, total	(X)	243.5	(X)	217.2
	Rotary drilling surface equipment:				
35331 11	Blocks, crown and traveling	253	1.3	355	1.8
35331 12	Draw works and accessories	83	9.0	92	8.4
35331 14	Rotary tables	156	1.5	145	1.0
35331 15	Elevators, spiders, slips, hooks, links, and connectors	(X)	5.3	(X)	6.9
35331 16	Swivels and accessories	(X)	3.9	(X)	1.6
35331 17	Well control equipment (blow-out preventers, etc.)	(X)	19.4	(X)	10.6
35331 19	Other rotary drilling surface machinery and equipment	(X)	21.1	(X)	23.5
	Rotary drilling subsurface equipment:				
35331 41	Bits (quantity in thousands)	588	111.0	652	110.6
35331 42	Reamers	(X)	3.8	(X)	6.0
35331 43	Coring equipment	(X)	2.2	(X)	1.2
35331 44	Tool joints, subs, and connectors	(X)	19.8	(X)	17.9
35331 45	Drill collars (quantity in thousands)	17	10.9	12	8.1
35331 47	Fishing and cutting tools	(X)	8.3	(X)	6.4
35331 49	Other subsurface rotary driving equipment, including Kelly joints	(X)	13.0	(X)	12.3
35331 00	Rotary oilfield and gasfield drilling machinery and equipment, n.s.k.	(X)	13.0	(X)	1.2
35332 --	Other oilfield and gasfield drilling machinery and equipment, total	(X)	43.5	(X)	38.8
35332 31	Cable tool drilling machinery and equipment (including both surface and subsurface equipment)	(X)	5.7	(X)	2.8
	Cementing, floating, guiding, and shoe equipment:				
35332 51	Guide shoes, float collars, and combination guide and float shoes	(X)	8.4	(X)	6.8
35332 55	Other cementing equipment	(X)	9.9	(X)	7.0
35332 61	Parts for oil and gasfield drilling equipment sold separately (except parts for portable drilling rigs)	(X)	13.7	(X)	18.2
35332 98	Other oilfield and gasfield drilling equipment, except portable	(X)	5.8	(X)	4.0
35333 --	Oilfield and gasfield production machinery and equipment (except pumps), total	(X)	260.5	(X)	261.4
	Flowing well equipment, surface and subsurface:				
35333 11	Christmas tree assemblies	(X)	28.4	(X)	15.0
35333 13	Casing and tubing heads and supports	(X)	10.9	(X)	11.7
35333 15	Chokes, manifolds, and other accessories	(X)	15.4	(X)	16.8
35333 19	Rodless oil lifting machinery and equipment (other than pumps)	(X)	23.8	(X)	7.6
	Rod lifting machinery and equipment, surface, including pumps when they are components of a complete assembly:				
35333 53	Pumping units and accessories, including back crank equipment	6,089	28.8	9,138	41.4
35333 55	Other surface rod lifting machinery and equipment	(X)	1.6	(X)	2.0
35333 57	Rod lifting equipment, subsurface, except pumps (quantity represents thousands of sucker rods shipped)	1,577	20.7	2,594	24.6
	Other production machinery and equipment:				
35333 61	Packers	(X)	38.7	(X)	17.3
35333 65	Screens, tubing, catchers, etc	(X)	11.0	(X)	8.5
35333 71	Oil and gas separating, metering, and treating equipment (quantity represents thousands of separators)	21	16.1	16	13.9
35333 81	Parts for oilfield and gasfield machinery and tools, sold separately, including parts for portable drilling rigs but excluding parts for other drilling equipment	(X)	11.2	(X)	19.5
35333 98	Other oilfield and gasfield machinery and tools	(X)	38.8	(X)	78.5
35333 00	Oilfield and gasfield production machinery and equipment (except pumps), n.s.k	(X)	15.0	(X)	4.6
35334 --	Other oilfield and gasfield machinery and tools (except pumps) including water well, total	(X)	65.4	(X)	43.3
	Portable drilling rigs, permanently mounted on truck or trailer:				
	Oilfield and gasfield:				
35334 11	Cable tool	(6)	(6)	122	3.5
35334 13	Rotary rigs	165	9.2	298	14.6
	Water well and blast hole:				
35334 15	Cable tool	6274	66.5	397	2.9
35334 17	Rotary rigs	100	4.8	209	6.7
35334 21	Derricks, oilfield and gasfield, substructures, and accessories--regular and portable, including equipment shipped "knocked down" and assembled on the site)	(NA)	25.3	(NA)	8.1
35334 31	Well surveying machinery and equipment	(X)	13.1	(X)	7.1
35334 00	Other oilfield and gasfield machinery and tools, n.s.k	(X)	6.6	(X)	(Z)

See footnotes at end of table.

TABLE 6A-1. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Total shipments including interplant transfers			
		1967		1963	
		Quantity (number of units)	Value (million dollars)	Quantity (number of units)	Value (million dollars)
3533- --	OILFIELD MACHINERY--Continued				
35330 00	Oilfield machinery and equipment, n.s.k. (For companies with 10 or more employees. See Note.)	(X)	44.9	(X)	11.9
35330 02	Oilfield machinery and equipment, n.s.k. (For companies with less than 10 employees. See Note.)	(X)	3.0		
3534- --	ELEVATORS AND MOVING STAIRWAYS, TOTAL	(X)	295.9	(X)	248.2
	Elevators (except farm and portable):				
35340 11	Electric passenger (except residence lifts)	6,385	116.0	5,930	108.1
35340 12	Hydraulic passenger	2,733	21.0	2,184	13.3
35340 13	Electric freight	856	7.1	1,040	10.8
35340 15	Hydraulic freight	1,685	9.5	2,536	11.6
35340 31	Automobile lifts (service station and garage type)	45,178	26.6	34,026	20.0
35340 51	Moving stairways and escalators	732	14.4	672	12.7
35340 96	Other nonfarm elevators (including sidewalk elevators, dumbwaiters, man lifts, hand-operated freight elevators, residence lifts, etc.)	(X)	16.8	(X)	9.9
35340 97	Parts and attachments for elevators and moving stairways (sold separately)	(X)	56.0	(X)	53.7
35340 00	Elevators and moving stairways, n.s.k. (For companies with 10 or more employees. See Note.)	(X)	26.4	(X)	8.1
35340 02	Elevators and moving stairways, n.s.k. (For companies with less than 10 employees. See Note.)	(X)	2.1		

Product code	Product	Value of shipments including interplant transfers (million dollars)	
		1967	1963
3535- --	CONVEYORS AND CONVEYING EQUIPMENT, TOTAL	655.4	414.8
35351 --	Conveyors and conveying equipment (except hoists and farm elevators)	478.9	306.2
35351 11	Gravity conveyors (skate, wheel, and roller)	45.3	29.9
35351 31	Overhead trolley conveyor systems	44.0	38.1
35351 41	Pneumatic tube systems, including foot-power units	29.9	13.5
35351 51	Portable conveyors (except farm)	28.8	13.1
35351 61	Underground mine conveyors and conveying systems		11.6
	Other conveyors and conveying systems (including specially engineered conveyor installations):		
	Bulk material conveyors:		
35351 65	Belt conveyors and systems for bulk materials	186.0	113.8
35351 67	Bucket elevators and other bulk material conveyors except belt conveyors	38.0	
35351 73	Package (unit) conveyors	84.6	81.2
35351 00	Conveyors and conveying equipment (except hoists), n.s.k.	22.3	4.9
35352 11	Parts, attachments, and accessories for conveyors and conveying systems (sold separately)	118.6	88.0
35350 00	Conveyors and conveying equipment (including parts), n.s.k. (For companies with 10 or more employees. See Note.)	49.7	20.6
35350 02	Conveyors and conveying equipment (including parts), n.s.k. (For companies with less than 10 employees. See Note.)	8.2	

See footnotes at end of table.

TABLE 6A-1. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Total shipments including interplant transfers			
		1967		1963	
		Quantity (number of units)	Value (million dollars)	Quantity (number of units)	Value (million dollars)
3536- --	HOISTS, CRANES, AND MONORAILS, TOTAL	(X)	385.3	(X)	224.2
35361 --	Hoists, total	(X)	144.9	(X)	105.0
35361 12	Hand and electric chain hoists	164.8	27.5	168.4	22.8
35361 14	Mine shaft and slope electric wire rope hoists	(X)	(7)	0.2	3.0
35361 16	Other electric wire rope hoists	29.1	31.0	22.7	20.3
35361 37	Air hoists	11.6	11.5	11.4	10.1
35361 38	Other hoists	(NA)	[7]46.1	112.0	32.0
35361 45	Parts and attachments for hoists (sold separately)	(X)	22.0	(X)	16.1
35361 00	Hoists, n.s.k.	(X)	6.6	(X)	0.6
35362 --	Overhead traveling cranes and monorail systems, total	(X)	215.1	(X)	115.7
	Cranes (except construction power cranes):				
	Electric overhead traveling:				
35362 12	Bridge type	9.7	160.6	3.1	79.0
35362 14	Other, including jib type	(NA)	7.8	2.4	7.7
35362 15	Hand power overhead traveling	1.9	2.3	2.0	2.3
35362 53	Monorail systems	(NA)	23.7	2.8	13.2
35362 55	Parts and attachments for overhead traveling cranes and monorail systems (sold separately)	(X)	16.9	(X)	13.0
35362 00	Overhead traveling cranes and monorail systems, n.s.k.	(X)	3.8	(X)	0.4
35360 00	Hoists, industrial cranes, and monorail systems, n.s.k. (Companies with 10 or more employees. See Note.)	(X)	23.6	(X)	3.5
35360 02	Hoists, industrial cranes, and monorail systems, n.s.k. (Companies with less than 10 employees. See Note.)	(X)	1.7		
3537- --	INDUSTRIAL TRUCKS AND TRACTORS, TOTAL	(X)	780.7	(X)	458.7
	Powered trucks and tractors:				
35370 11	Motorized handtrucks, pedestrian controlled	13.1	27.8	10.9	21.3
	Industrial trucks (operator riding) and tractors:				
	Electric (storage battery, gas-electric, gasoline-electric, diesel-electric, tethered electric):

35370 37	6,000 to 14,999 lb. capacity	10.7	67.2		
35370 38	15,000 lb. capacity and above	2.3	59.5		
35370 43	Tractors, industrial	(X)	18.8	[8]1.7	[8]6.6
35370 49	All other industrial trucks (operator riding) and industrial tractors, including compressed-air powered, etc.			(X)	[1]14.4
35370 51	Portable elevators (stackers) excluding farm type	13.4	6.1	3.8	4.3
	Handtrucks and trailers, including dollies and platform trucks:				
35370 61	Handlift	(X)	19.2	(X)	10.0
35370 65	Other handtrucks and trailers, including 2-wheel, 4-wheel dollies, and platform trucks	(X)	36.3	(X)	32.2
35370 71	Metal pallets and skids (excluding wood and metal combination)	(X)	25.9	(X)	12.1
35370 81	Parts and attachments and miscellaneous equipment (sold separately)	(X)	165.5	(X)	91.7
35370 00	Industrial trucks and tractors, n.s.k. (For companies with 10 or more employees. See Note.)	(X)	73.8	(X)	31.6
35370 02	Industrial trucks and tractors, n.s.k. (For companies with less than 10 employees. See Note.)	(X)	6.2		

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [8]From 10 to 30 percent of this figure was estimated. (Z) under 50 thousand.

Footnotes continued on next page.

TABLE 6A-1. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

Footnotes for table 6A--35B--Continued

[1]For these products, data were also collected in the census commodity survey program. In lieu of asking for detailed product statistics in the census of manufactures, respondents were asked to report only value of shipments for specified classes of products for which separate figures had previously been collected in the commodity survey. In most cases, the value figures reported in the census of manufactures for each class of products agreed closely with the corresponding figures reported in the commodity survey. However, there were some differences between the census figures and the commodity survey figures. These variations were due primarily to the following reasons:

a. Use of different reporting periods (calendar year vs. fiscal year.)
b. Use of different bases for reporting value (company sales vs. factory production.)
c. Use of estimates in reporting data on the annual survey, whereas census of manufactures figures generally represent more exact shipments figures.

[2]1963 data for contractors off-highway wheel tractors include wheel tractors shipped as an integral part of all types of scrapers. For 1967, wheel tractors shipped as an integral part of conventional non-elevating scrapers, are included in the total value of scrapers which they power. However, 1967 data for wheel tractors shipped as an integral part of elevating scrapers are included with contractors off-highway wheel tractors.

[3]Parts and attachments for wheel and tracklaying tractor shovel loaders are included in product class 35313 beginning in 1965. In prior years they were included in product class 35317. The 1963 figures have been revised accordingly.

[4]Data for product code 35319 05, four wheel drive, skid steer, loaders are included in product code 35319 83 to avoid disclosing figures for individual companies.

[5]In 1963 codes 35319 05, 23, and 71 were included in product code 35319 83, other excavating and road construction machinery.

[6]1967 data for oil and gas field cable tools, code 35334 11, have been included with product code 35334 15, water well and blast hole cable tools in order to avoid disclosing figures of individual companies.

[7]Included with product code 35361 38, Other hoist, to avoid disclosing figures of individual companies.

[8]Represents gasoline powered units only. 1963 data for all other internal combustion powered industrial trucks and industrial tractors are included with product code 35370 49, all other industrial trucks (operator riding) and industrial tractors, including compressed-air powered, etc.

TABLE 6A-2 Quantity and Value of Shipments of Power Cranes and Shovels and Other Selected Construction Machinery: 1967 and 1963

Census product code	Product	Total shipments including interplant transfers			
		1967		1963	
		Quantity (number)	Value ($1,000)	Quantity (number)	Value ($1,000)
	Power cranes, draglines and shovels, including mine shovels, but not including equipment for mounting on tractors, total	10,262	461,173	6,610	289,281

TABLE 6A-3. Quantity and Value of Shipments of Selected Types of Construction Machinery: 1967 and 1963--Continued

SIC code	Product	Total		1963	
		Number	Value ($1,000)	Number	Value ($1,000)
	Tractor shovel loaders--Continued				
	Wheel type, front-end loader (integral design, rear engine mount)--Continued				
	2-wheel drive:				
35317 10	Under 1 cu. yd. bucket capacity	1,437	8,916	2,354	11,258
35317 12	1 cu. yd. bucket capacity and over				
35317 13	Front engine mount, integral design tractor shovel loader/backhoe	1,575	15,688	(NA)	(NA)
	Portable water-well and blast-hole drills, total	707	27,664	591	16,671
35319 28	Churn-drill type	159	1,961	229	2,480
35319 29	Rotary-drill type	548	25,703	362	14,191

Source: Current Industrial Reports Series MQ-35D, "Construction Machinery". Data were collected on Quarterly Form MQ-35D.

Note: Data for tracklaying tractors and tracklaying tractor shovel loaders are included in tables 6A-4 and 6A-5.
- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. In some cases, figures which are otherwise publishable are withheld to avoid indirect disclosure by subtraction from higher level totals or from related figures, or to give precedence to annual totals. r Revised. (X) Not applicable. ** Represents a combination of codes. (NA) Not available.

[1] Totals include the value of data withheld to avoid disclosing figures for individual companies.

[2] Represents wheeled tractors designed primarily to be used as towing units for scrapers, trailers, wagons, and similar type of towed equipment for use on natural terrain but restricted by State laws or regulations from operating on public highways.

[3] For 1967, wheel tractors shipped as an integral part of "conventional bowl, nonelevating scrapers" (codes 3531801, 3531802, 3531803, 3531804, and 3531805) are included in the total value of scrapers which they power. For 1967, wheel tractors shipped as an integral part of "elevating-type scrapers" (codes 3531806, 3531807, 3531808, and 3531809) are included with contractors' off-highway wheel tractors. 1963 data for contractors' off-highway wheel tractors includes wheel tractors shipped as integral parts of all types of scrapers.

[4] Machines shipped primarily as independent dozing or pushing units characterized with approximate equal weight distribution fore and aft with all wheel drive as differentiated from machines designed for integral hook-up towing.

[5] 1963 data for "self-propelled bituminous pavers" (codes 3531651 and 3531653) are included with "other, including mixers, heating kettles, heaters, circulators, travel mix type asphalt boxes and spreader boxes" (code 3531660).

[6] 1967 data for "other aggregate processing plants" (code 3531945, "under 150 tons per hour" and code 3531947, "150 tons per hour and over") have been withheld. It has been determined that plants reported in these categories are of the stationary type and are included in Current Industrial Reports Series MA-35F, Mining Machinery.

[7] For 1963, all scraper bowls (conventional nonelevating, elevating, and all others) are included in codes 3531801, 3531802, 3531803, 3531804, and 3531805.

[8] Represents vibratory compactors other than rollers.

[9] Excludes value of prime mover when sold with machine.

[10] Excludes front-end loaders shipped to producers of complete tractor-shovel loaders (integral units).

[11] Represents vehicles normally operating off the public highway, and specifically designed to transport materials, property, or equipment on mining, construction, logging, petroleum development and similar projects. These vehicles are of such weight as to be normally restricted by State law or regulation from operating on public highways.

[12] 1963 data for code 3531863 are included with 3531861.

[13] 1963 data for code 3531864 are included with 3531862.

35322 37	Rod	26	2,133	17	1,278
35322 55	Screens-vibrating, trommell, mine type	4,103	22,547	3,662	16,719
35323 --	All other mining machinery and equipment, total	(X)	46,238	(X)	38,446
	Drills:				
35323 23	Rock drills (percussion type)	10,276	13,759	10,359	11,776
35323 13	Core drills for mineral exploration	623	2,615	546	3,569
	Rotary drills:				
35323 43	Underground (coal and roof)	478	12,576	137	2,014
35323 45	Surface (blast hole)			133	5,453
35323 98	Other mining machinery and equipment (complete units)[2]	(X)	17,288	(X)	15,634

Source: Current Industrial Reports Series MA35F, "Mining Machinery and Equipment."

Standard notes: (D) Withheld to avoid disclosing operations of individual companies. In some cases figures which are otherwise publishable are withheld to avoid indirect disclosure by subtraction from higher-level totals or from related figures. (X) Not applicable.

[1]Includes figures for dense medium vessels (3532153), centrifuges (3532158), concentrating spirals (3532163), thickeners (3532164) and filters (3532165),

[2]Includes power roof supports for longwall mining but excludes parts and attachments for mining machines.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1] This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

TABLE 6C. Product Classes–Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

Code	Product class	1967	1966[1]	1965[1]	1964[1]	1963	1958	1954	1947

35370	Industrial trucks and tractors	780.7	768.5	636.6	562.9	458.7	276.7	254.8	154.8

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2]Parts (for replacement and repair) and attachments for wheel type tractor shovel loaders and for tracklaying type tractor shovel loaders are included in product class code 35317 for 1964. These parts were included in product class 35319 for 1958 and 1954.

[3]Source: Current Industrial Reports Series M35D, Construction Machinery, and M35S, Tractors (Except Garden Tractors). These data exclude the value of parts and attachments for wheel type shovel loaders. In addition, data for 1958 exclude parts and attachments for tracklaying type shovel loaders.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

(See Appendix, Explanation of Terms)

Code	Material	Unit of measure	1967		1963

970099	All other materials and components, parts, containers and supplies consumed		(X)	180.6	(X)	110.9
976000	Materials, parts, containers, and supplies, n.s.k.[4]		(X)	51.1	(X)	14.4

See footnotes on next page.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963–Continued

Footnotes for Table 7A--35B

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated. (Z) Under 50 thousand.

[1]The figures are understated by $10 million or less because of apparent undercoverage of carbon steel pipe and tube.

[2]Included with material code 970099, "All other materials and components, etc."

[3]For 1967, the following materials were produced and consumed in the same establishment for industry 3531: iron and steel forgings (code 339100), 36.0 thousand short tons; and gasoline and other carburetor engines (code 351901), 9.3 thousand units. No other data are available for 1967 on the quantities of castings, forgings, engines, and integral horsepower motors and generators produced and consumed in the same establishment. For 1963, the following data are available: industry 3531--iron and steel forgings (code 339100), 34.0 thousand short tons; gasoline and other carburetor engines (code 351901), 9.4 thousand units; fractional horsepower electric motors (code 362115), 0.7 thousand units; integral horsepower motors and generators (1 hp. and over) (code 362120), 9.1 thousand units; industry 3532--iron castings (code 332011), 12.2 thousand short tons; steel castings (code 332300), 1.3 thousand short tons; copper castings (code 336200), 1.7 million pounds; industry 3533--iron castings (code 332011), 3.9 thousand short tons; steel castings (code 332300), 1.6 thousand short tons; industry 3535--iron castings (code 332011), 9.8 thousand short tons; fractional horsepower electric motors (code 362115), 0.3 thousand units; and industry 3537--integral horsepower motors and generators (1 hp. and over) (code 362120), 6.8 thousand units.

[4]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967 this includes estimates for companies that were not mailed report forms.

[5]These figures are understated by $5 million or less because of apparent undercoverage of carbon steel pipe and tube.

[6]Included with material code 970099. "All other materials and components, etc." to avoid disclosing figures for individual companies.

TABLE 7B. Fuels and Electric Energy Consumed: 1967

(See Appendix, Explanation of Terms)

Code	Item	Unit of measure	Construction machinery (SIC 3531)	Oilfield machinery (SIC 3533)
	Cost of purchased fuels and electric energy, total....	Million dollars.	33.0	7.7
	Cost of purchased fuels, total.....	Million dollars.	14.2	2.7
121005	Coal (anthracite, bituminous, and lignite):			
	Quantity.....	1,000 short tons	345.6	(NA)
	Cost.....	Million dollars.	2.6	(NA)
331212	Coke, screenings, and breeze:			
	Quantity.....	1,000 short tons	14.8	(NA)
	Cost.....	Million dollars.	0.5	(NA)
	Fuel oil, total:			
	Quantity.....	1,000 barrels...	290.8	(NA)
	Cost.....	Million dollars.	1.2	(NA)
291141	Distillate:			
	Quantity.....	1,000 barrels...	208.9	(NA)
	Cost.....	Million dollars.	0.9	(NA)
291151	Residual:			
	Quantity.....	1,000 barrels...	81.9	(NA)
	Cost.....	Million dollars.	0.3	(NA)
131300	Gas (natural, manufactured mixed, blast-furnace, coke-oven, and other gas):			
	Quantity.....	Million cu. ft..	10,778.9	(NA)
	Cost.....	Million dollars.	6.1	(NA)
960013	Other fuels (gasoline, LPG, wood, etc.).....	...do.....	0.4	(NA)
	Fuels, n.s.k.....	...do.....	3.4	(NA)
	Purchased electric energy:			
	Quantity.....	Million kw.-hrs.	1,684.4	471.5
	Cost.....	Million dollars.	18.8	5.0
	Quantity of electric energy generated less quantity sold.....	Million kw.-hrs.	80.1	-
	Total energy used for heat and power[1].....	Million kw.-hrs. equivalent.....	8,310.2	1,905.2

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Man-hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

3537	INDUSTRIAL TRUCKS AND TRACTORS										
	ENTIRE INDUSTRY	351	27.0	199.7	17.7	36.5	115.6	402.4	381.7	778.9	23.9
	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION	318	23.5	176.2	15.1	31.4	101.4	367.3	335.3	690.7	22.2

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. X Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 9. Establishments and Production Workers for Selected Metalworking Operations: 1967

To be published in a separate subject chapter titles "Selected Metalworking Operations."

METALWORKING MACHINERY AND EQUIPMENT

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3541--Machine Tools, Metal-Cutting Types
3542--Machine Tools, Metal-Forming Types
3544--Special Dies And Tools, Die-Sets, Jigs, and Fixtures
3545--Machine Tool Accessories and Measuring Devices
3548--Metalworking Machinery, Except Machine Tools; and Power-Driven Hand Tools

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3541--MACHINE TOOLS, METAL-CUTTING TYPES

This industry comprises establishments primarily engaged in manufacturing power-driven machines, not supported in the hands of an operator when in use, that shape metal by cutting or use of electrical techniques; the rebuilding of such machine tools, and the manufacture of replacement parts for them. Metalworking, or primarily metalworking, machine tools designed primarily for home workshops are also included. Establishments primarily engaged in the manufacture of electric welding equipment are classified in industry 3623; and portable power-driven handtools, gas welding and cutting equipment, and automotive maintenance equipment in industry 3548. For a detailed list of products of industry 3541, refer to table 6A, product codes 3541100 to 3541941.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Machine Tools, Metal-Cutting Types, Industry in 1967 totaled $2,127 million. This included shipments of machine tools, metal-cutting types (primary products), valued at $1,716 million, shipments of other products (secondary products) valued at $270 million, and miscellaneous receipts of $142 million.

This industry's shipments of machine tools, metal-cutting types (primary products) in 1967 represented 86 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 81 percent. Secondary products shipped by this industry in 1967 consisted mainly of machine tool accessories ($123 million), and machine tools, metal-forming types ($20 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 27 percent of the total industry shipments are represented by plants specializing in product class 35415, Lathes.

Industry 3541 shipments of machine tools, metal-cutting types (primary products) in 1967 represented 90 percent (coverage ratio) of these products valued at $1,908 million shipped by all industries. In 1963, the coverage ratio was 88 percent. Other industries shipping machine tools, metal-cutting types (primary products) included industry 3545, Machine Tool Accessories, $41 million; and industry 3544, Special Dies, Tools, Jigs, and Fixtures, $26 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3541, these establishments accounted for approximately 1 percent of payroll and 1 percent of value added by manufacture.

3542--MACHINE TOOLS, METAL-FORMING TYPES

This industry comprises establishments primarily engaged in manufacturing power driven machines, not supported in the hands of an operator while in use, for pressing, forging, hammering, extruding, shearing, bending or die casting metal into shape. This industry also includes rebuilding such machine tools and manufacturing repair parts for them. Establishments primarily engaged in the manufacture of electric welding equipment are classified in industry 3623; portable power-driven handtools, gas welding and cutting equipment, and automotive maintenance equipment in industry 3548. For a detailed list of products of industry 3542, refer to table 6A, product codes 3542100 to 3542475.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Machine Tools, Metal-Forming Types Industry in 1967 totaled $714 million. This included shipments of machine tools, metal-forming types (primary products), valued at $568 million, shipments of other products (secondary products) valued at $100 million, and miscellaneous receipts of $46 million.

This industry's shipments of machine tools, metal forming types (primary products) in 1967 represented 85 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 86 percent. Secondary products shipped by this industry in 1967 included machine tools, metal-cutting types ($23 million), and special dies, tools, jigs, and fixtures ($23 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 40 percent of the total industry shipments are represented by plants specializing in product class 35422, Presses, including forging presses.

Industry 3542 shipments of machine tools, metal-forming types (primary products) in 1967 represented 84 percent (coverage ratio) of these products valued at $677 million shipped by all industries. In 1963, the coverage ratio was 79 percent. Other industries shipping machine tools, metal-forming types (primary products) included industry 3541, Machine Tools, Metal-Cutting Types, $20 million; and industry 3548, Metalworking Machinery, N.E.C., $17 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3542, these establishments accounted for approximately 1 percent of payroll and 1 percent of value added by manufacture.

3544--SPECIAL DIES AND TOOLS, DIE-SETS, JIGS, AND FIXTURES

This industry comprises establishments commonly known as contract tool and die shops and primarily engaged in manufacturing, on a job or order basis, special tools and fixtures for use with machine tools, hammers, die casting machines, and presses. The products of establishments classified in this industry include a wide variety of special toolings, such as dies; punches; die sets and components, and subpresses; jigs and fixtures; and special checking devices. Establishments primarily engaged in manufacturing molds for die casting and foundry casting; metal molds for plaster working, rubberworking, plastic-working, glass-working and similar machinery are also included. For a detailed list of products of industry 3544, refer to table 6A, product codes 3544113 to 3544263.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Special Dies, Tools, Jigs, and Fixtures Industry in 1967 totaled $2,202 million. This included shipments of special dies, tools, jigs, and fixtures (primary products), valued at $1,875 million, shipments of other products (secondary products) valued at $111 million, and miscellaneous receipts (mainly contract work on materials owned by others) of $216 million.

This industry's shipments of special dies, tools, jigs, and fixtures (primary products) in 1967 represented 94 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 93 percent. Secondary products shipped by this industry in 1967 included machine tools, metal-cutting types ($26 million), and metal stampings ($14 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 62 percent of the total industry shipments are represented by plants specializing in product class 35441, Special dies and tools, die sets, jigs and fixtures; and 17 percent in 35442, Industrial molds.

Industry 3544 shipments of special dies, tools, jigs, and fixtures (primary products) in 1967 represented 74 percent (coverage ratio) of these products valued at $2,520 million shipped by all industries. In 1963, the coverage ratio was 72 percent. Other industries shipping special dies, tools, jigs, and fixtures (primary products) included industry 3461, Metal Stampings, $241 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3544 these establishments accounted for approximately 3 percent of payroll and 5 percent of value added by manufacture.

3545--MACHINE TOOL ACCESSORIES AND MEASURING DEVICES

This industry comprises establishments primarily engaged in manufacturing cutting tools, machinists precision measuring tools, and attachments and accessories for machine tools

and for other metalworking machinery, not elsewhere classified. Establishments primarily engaged in manufacturing handtools except power driven are classified in Group 342. For a detailed list of products of industry 3545, refer to table 6A, product codes 3545113 to 3545351.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Machine Tool Accessories Industry in 1967 totaled $1,310 million. This included shipments of machine tool accessories (primary products), valued at $1,036 million, shipments of other products (secondary products) valued at $176 million, and miscellaneous receipts (mainly resales) of $98 million.

This industry's shipments of machine tool accessories (primary products) in 1967 represented 85 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 83 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 69 percent of the total industry shipments are represented by plants specializing in product class 35451, Small cutting tools for machine tools and metalworking machinery.

Industry 3545 shipments of machine tool accessories (primary products) in 1967 represented 85 percent (coverage ratio) of these products valued at $1,222 million shipped by all industries. In 1963, the coverage ratio was 84 percent. Other industries shipping machine tool accessories (primary products) consisted mainly of industry 3541, Machine Tools, Metal-Cutting Types, $123 million; and industry 3544, Special Dies, Tools, Jigs, And Fixtures, $12 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3545, these establishments accounted for approximately 1 percent of payroll and 1 percent of value added by manufacture.

3548--METALWORKING MACHINERY, EXCEPT MACHINE TOOLS; AND POWER-DRIVEN HANDTOOLS

This industry comprises establishments primarily engaged in manufacturing metalworking machinery such as rolling mill machinery and equipment, welding equipment, wire fabricating machinery and equipment, except wire drawing dies, and automotive maintenance machinery and equipment. This industry also includes establishments primarily engaged in manufacturing power-driven handtools for all applications. Establishments primarily engaged in manufacturing machine tools, metal-cutting types, are classified in industry 3541, and those primarily engaged in manufacturing machine tools, metal-forming types, in industry 3542. For a detailed list of products of industry 3548, refer to table 6A, product codes 3548111 to 3548598.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Metalworking Machinery, N.E.C., Industry in 1967 totaled $1,158 million. This included shipments of metalworking machinery, n.e.c.

(primary products), valued at $905 million, shipments of other products (secondary products) valued at $141 million, and miscellaneous receipts (mainly resales) of $112 million.

This industry's shipments of metalworking machinery, n.e.c. (primary products) in 1967 represented 86 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 85 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 44 percent of the total industry shipments are represented by plants specializing in product class 35482, Power driven handtools; and 34 percent in 35481, Rolling mill machinery and equipment.

Industry 3548 shipments of metalworking machinery, n.e.c. (primary products) in 1967 represented 88 percent (coverage ratio) of these products valued at $1,028 million shipped by all industries. In 1963, the coverage ratio was also 88 percent. Other industries shipping metalworking machinery, n.e.c. (primary products) included industry 3323, Steel Foundries, $24 million; and industry 3542, Machine Tools, Metal-Forming Types, $14 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3548, these establishments accounted for approximately 1 percent of payroll and 1 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio
	Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(percent)	(percent)

Note: In 1967, 1963, and 1958, the number of companies in industry 3541 was 865, 784, and 611, respectively; in industry 3542: 344, 362, and 279; industry 3544: 6,532, 5.850, and 5,715; industry 3545: 1,073, 983, and 865; industry 3548: 409, 420, and 349. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume. The percentage standard errors of the 1966/1965 relatives for employment and value added were as follows: 3541--2 and 1 percent, respectively; 3542--6 and 3 percent, respectively; 3544--4 and 1 percent, respectively; 3545--1 and 1 percent, respectively; and 3548--4 and 2 percent, respectively.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [c]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

TABLE 3. Detailed Statistics: 1967

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2]Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments					Value of primary product shipments →			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. ^{r}Revised.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

	3429 Hardware, n.e.c	(over 2)
	Listing of the other industries with over $2 million shipments of the primary products--continued	
3544-	3461 Metal stampings	241.3
	3522 Farm machinery	(2-5)
	3559 Special industry machinery, n.e.c	4.3
	3599 Miscellaneous machinery, except electrical	21.2
	3711 Motor vehicles	(over 2)
	3714 Motor vehicle parts and accessories	(50-100)
	3722 Aircraft engines and engine parts	3.1
	3729 Aircraft equipment, n.e.c	8.5
3545-	3423 Hand and edge tools, n.e.c	6.9
	3599 Miscellaneous machinery, except electrical	4.7
	3821 Mechanical measuring devices	(2-5)
	3822 Automatic temperature controls	(over 2)
	3999 Manufactures, n.e.c	(over 2)
3548-	3323 Steel castings	24.3
	3352 Aluminum rolling and drawing	(over 2)
	3452 Bolts, nuts, rivets, and washers	3.8
	3494 Valves and pipe fittings	(over 2)
	3499 Fabricated metal products, n.e.c	(2-5)
	3522 Farm machinery	(5-10)
	3531 Construction machinery	(2-5)
	3534 Elevators and moving stairways	(over 2)
	3552 Textile machinery	(over 2)
	3553 Woodworking machinery	2.6
	3559 Special industry machinery, n.e.c	4.8
	3564 Blowers and fans	(over 2)
	3569 General industrial machinery, n.e.c	3.8
	3629 Electrical industrial apparatus, n.e.c	(2-5)
	3634 Electric housewares and fans	(2-5)
	3729 Aircraft equipment, n.e.c	4.1

Note: Data shown parenthetically are ranges expressed in millions of dollars. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under 50 thousand.

[1]Includes, where appropriate, values for those 4-digit product groups for which either the symbol "D" or a value range, e.g. (2-5), (under 2), etc. appear above.

TABLE 6A-1. Quantity and Value of Shipments by All Producers: 1967 and 1963

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Total shipments including interplant transfers			
		1967		1963	
		Quantity (1,000 units)	Value (million dollars)	Quantity (1,000 units)	Value (million dollars)
3541- --	MACHINE TOOLS, METAL-CUTTING TYPES, TOTAL	(X)	1,907.8	(X)	925.3
35411 --	Boring machines:				
	As reported in the census of manufactures[1]	(X)	127.8	(X)	66.3

35410 00	Machine tools, metal-cutting types, n.s.k. (For companies with ten or more employees. See Note.)	(X)	70.3	(X)	24.4
35410 02	Machine tools, metal-cutting types, n.s.k. (For companies with less than ten employees. See Note.)	(X)	12.2		

	Product	Value of total shipments including interplant transfers (million dollars)	
		1967	1963
3542- --	MACHINE TOOLS, METAL-FORMING TYPES, TOTAL	676.6	444.8
35421 00	Punching, shearing, bending, and forming machines:		
	As reported in the census of manufactures[1]	130.9	92.5
	As reported on Census Form MQ-35W[1]	114.4	88.0
35422 00	Presses, including forging presses:		
	As reported in the census of manufactures[1]	261.3	141.7
	As reported on Census Form MQ-35W[1]	240.1	136.0
35423 --	Other metal-forming machine tools, including forging machines, total	122.9	71.7
	Products included in both the census of manufactures and on Census Form MQ-35W:		
	As reported in the census of manufactures[1]	107.4	66.6
	As reported on Census Form MQ-35W[1]	98.8	64.2
35423 97	All other metal-forming machines	15.5	5.1

See footnotes at end of table.

TABLE 6A-1. Quantity and Value of Shipments by All Producers: 1967 and 1963—Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Value of total shipments including interplant transfers (million dollars)	
		1967	1963
3542- --	MACHINE TOOLS, METAL-FORMING TYPES,--Continued		
35424 --	Parts for metal-forming machine tools and rebuilt metal-forming machinery, total	125.7	118.2
35424 11	Parts for metal-forming machine tools, except parts and attachments for electric and pneumatic power-driven handtools	120.8	112.4
35424 75	Rebuilt metal-forming type machine tools	5.0	5.8
35420 00	Machine tools, metal-forming types, n.s.k. (For companies with 10 or more employees. See Note.)	30.7	20.7
35420 02	Machine tools, metal-forming types, n.s.k. (For companies with less than 10 employees. See Note.)	4.9	

Product code	Product	Total shipments, including interplant transfers		
		1967		1963
		Quantity (million lbs.)	Value (million dollars)	Value (million dollars)
3544- --	SPECIAL DIES, TOOLS, JIGS, AND FIXTURES, TOTAL	(X)	2,520.2	1,608.1
35441 --	Special dies and tools, die sets, jigs and fixtures, total	(X)	[2]1,719.8	[2]1,161.2
	Jigs and fixtures, all types:			
	Gauging and checking types:			
35441 13	Under 1,000 pounds weight			
35441 15	1,000 pounds weight and over			
	All other jigs and fixtures (holding, positioning, layout, assembly, etc.):	(NA)	642.3	230.9
35441 17	Under 1,000 pounds weight			
35441 18	1,000 pounds weight and over			
35441 19	Standard catalog components and parts for jigs and fixtures, including drill bushings	(X)	31.0	([3])
	Dies:			
	Forging dies, including cold forging and heading:			
35441 33	Open die type	(X)	22.2	35.6
35441 35	Closed die type	(X)	25.7	
	Standard and special components and parts for dies:			
35441 73	Die sets	(X)	39.6	[3]46.6
35441 79	Other, including standard punches, springs, etc	(X)	20.9	
	Forming and drawing dies, including press brake dies:			
35441 23	Under 500 pounds weight	(NA)	57.2	
35441 25	501 to 3,000 pounds weight	20.3	39.2	
35441 27	Over 3,000 pounds weight	49.2	95.8	
	Stamping dies, including lamination and blanking dies:			
35441 28	Progressive type dies	(X)	185.6	
35441 29	All other stamping type dies (punch, trim, notch, pierce, perforate, etc.)	(X)	189.1	763.5
35441 41	Extrusion and wiredrawing and straightening dies	(X)	20.5	
35441 49	All other dies	(X)	44.1	
35441 98	Other specially designed tooling, prototypes, and models	(X)	306.5	84.6
35441 00	Special dies and tools, die sets, jigs and fixtures, n.s.k.			
35442 --	Industrial molds, total[4]	(X)	[2]446.2	[2]311.1
	Industrial molds, made of metal:			
	For casting metals:			
35442 11	Diecasting dies (molds)	(X)	[2]99.3	[2]90.5
35442 13	Foundry molds, except ingot molds	(X)	8.8	15.2
35442 33	For molding rubber products, including tire molds	(X)	40.8	35.5
	For molding plastics:			
35442 51	Injection molds	(X)	168.1	
35442 55	Compression molds, imcluding matched metal molds	(X)	25.5	112.7
35442 59	All other molds, including transfer, plunger, and rotational molds	(X)	18.2	
35442 61	All other molds made of metal (including molds for glass and other materials) and mold bases	(X)	41.0	30.3
35442 63	Industrial molds, made of materials other than metal	(X)	10.3	6.1
35442 00	Industrial molds, n.s.k.	(X)	34.4	20.8
35440 00	Special dies, tools, jigs, and fixtures, n.s.k. (For establishments with 10 or more employees. See Note.)	(X)	251.1	135.9
35440 02	Special dies, tools, jigs, and fixtures, n.s.k. (For establishments with less than 10 employees. See Note.)	(X)	103.1	

See footnotes at end of table.

TABLE 6A-1. Quantity and Value of Shipments by All Producers: 1967 and 1963—Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Total shipments including interplant transfers (million dollars)	
		1967	1963
3545- --	MACHINE TOOL ACCESSORIES, TOTAL	1,222.4	731.7
35451 --	Small cutting tools for machine tools and metalworking machinery, total	770.9	464.4
	Broaches (excluding holders and burnishing bars):		
35451 13	High-speed steel	40.5	19.7
35451 15	Carbide, or special cast alloy, etc	8.6	5.0
	Twist drills (excluding combined drills, countersinks and gun drills):[5]		
35451 21	Carbon steel	3.5	2.8
	High-speed steel:		
35451 22	Taper shank	20.3	20.5
35451 23	Straight shank	81.0	52.3
35451 24	Carbide, solid and tipped (excluding tips and blanks sold separately; excluding masonry drills)	18.1	7.0
35451 25	Gun drills and gun reamers	5.4	(6)
35451 26	Combination drills and countersinks	4.5	(5)
35451 27	Countersinks (including port cutters, etc., but excluding combined drills and countersinks and pilots for interchangeable pilot types)	4.2	2.8
35451 29	Counter bores (including spotfacers, etc., but excluding pilots for interchangeable pilot types)	10.9	6.5
	Reamers, all types (excluding gunreamers):		
35451 31	Carbon steel (including blades sold separately)	3.0	2.9
35451 33	High-speed steel (including blades sold separately)	17.9	15.4
35451 36	Carbide, solid and tipped (excluding tips and blanks sold separately; including replaceable blades sold separately)	7.8	5.6
	Hobs:		
35451 41	Unground	9.0	7.4
35451 45	Ground	7.8	5.2
35451 46	Gear shaper cutters	7.5	6.6
35451 48	Gear shaving cutters	4.6	4.9
	Milling cutters:		
	End mills (excluding all inserted blade types, and steel mills but including solid or of bonded blade type, fishtail, die sinking, contour, router, tracer, hollow mills, etc.):		
35451 51	High-speed steel	[7]43.0	[7]21.2
35451 52	Carbide, solid and tipped (excluding tips and blanks sold separately)	[7]6.1	[7]4.2
	Replaceable inserted blade cutters, all types:		
	Nonindexible type:		
35451 53	High-speed steel, including complete cutters and replaceable blades sold separately	5.4	
35451 54	Carbide, including complete cutters and replaceable blades sold separately	9.7	8.2
	Indexible insert type:		
35451 55	High-speed steel, including complete cutters and indexible inserts sold separately	4.1	
35451 56	Carbide, including complete cutters and indexible inserts sold separately	5.5	
35451 58	Form relieved cutters, including high-speed steel and carbide (solid and tipped)	11.3	10.3
35451 59	Slitting saws and screw slotting cutters, including high-speed steel and carbide (tipped and solids)	8.5	5.7
	Milling cutters, n.e.c.:		
35451 61	High-speed steel	[7]12.7	[7]8.7
35451 63	Carbide, solid and tipped (excluding tips and blanks sold separately)	[7]6.9	[7]3.8
	Threading tools:		
	Taps (excluding taps in threading sets and screw plates and inserted chaser types):		
35451 78	Ground thread (high-speed steel)	59.1	42.7
35451 79	Cut thread (carbon steel and high-speed steel)	5.7	
35451 73	Dies, threading, including carbon steel, high-speed steel, and carbide (excluding dies in threading sets or screw plates, and inserted chaser types)	8.5	10.9
35451 75	Chasers and blades for both taps or dies of inserted blade or chaser type, including high-speed steel and carbide (excluding the die heads and insert or collapsible tap bodies)	17.0	14.3
35451 87	Thread rolling dies, including circular, flat, and planetary	11.0	4.3
35451 89	Other threading tools, including screw plates and threading sets	5.0	
	Single-point tools:[8]		
35451 65	High-speed steel	13.8	11.1
35451 66	Carbide including solid (excluding rough blanks), and tipped (excluding tips and blanks sold separately)	26.8	24.1
35451 68	Other materials	14.5	2.8
35451 72	Circular form tools (including blanks)	16.5	5.1
	Blanks, tips, and inserts:[9]		
35451 81	Blanks and tips including carbide, cast alloy, and ceramic	56.0	23.0
	Inserts, indexible type:		
	Carbide:		
35451 82	Utility ground	31.3	
35451 83	Precision ground	38.6	
35451 84	Other than carbide	1.8	35.6
	Inserts, other than indexible (on end, specials, etc.):		
35451 85	Carbide	8.7	
35451 86	Other than carbide	1.0	

See footnotes at end of table.

TABLE 6A-1. Quantity and Value of Shipments by All Producers: 1967 and 1963—Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Total shipments including interplant transfers (million dollars)	
		1967	1963
3545- --	MACHINE TOOL ACCESSORIES--Continued		
35451 --	Small cutting tools for machine tools and metalworking machinery--Continued		
	Other types of cutting tools for machine tools, n.e.c. including rotary burrs and rotary files and spade drills:[6]		
35451 92	Carbon steel	6.4	5.5
35451 94	High-speed steel	26.3	20.8
35451 96	Carbide, solid and tipped (excluding tips and blanks sold separately)	25.6	20.1
35451 00	Small cutting tools for machine tools and metalworking machinery, n.s.k.	29.5	17.3
35452 --	Precision measuring tools	130.8	88.0
	Machinists' precision tools:		
35452 11	Comparators	16.1	8.8
	Fixed size limit gages (American Gage Design type—C58-61):		
35452 13	Fixture type	8.9	7.0
35452 15	Thread type	9.4	6.0
35452 17	Adjustable size limit gages	4.6	2.8
35452 21	Gage blocks	4.0	2.6
35452 61	Dial indicators	9.9	6.6
35452 65	Micrometers and calipers	9.4	([10])
35452 71	Pneumatic gages (manual and automatic)	23.3	14.5
35452 98	Other machinists' precision tools, including dividers	36.1	[10]36.8
35452 00	Precision measuring tools, n.s.k.	9.2	3.0
35453 --	Other attachments and accessories for machine tools and metalworking machinery, total	239.5	152.6
	Chucks:		
35453 11	Drill	7.7	7.5
35453 13	Lathe	29.3	10.0
35453 15	Other chucks, including die heads and tap bodies	6.9	4.6
35453 21	Chuck holding devices (feeding fingers and collets, sleeves, sockets, drill heads, etc.)	23.9	16.6
35453 31	Tools for screw and automatic machines (box tools, hollow drills, work and tool holders, etc.) except tap and dies	20.6	10.0
35453 41	Other accessories and attachments for machine tools and metalworking machinery, except cutting tools	114.9	84.7
35453 51	Toolroom specialties, including levels, angle irons, plates, squares, sine bars, V-blocks, flats, vises, etc.	24.7	11.8
35453 00	Other attachments and accessories for machine tools and metalworking machinery, n.s.k.	11.5	7.2
35450 00	Machine tool accessories, n.s.k. (For companies with 10 or more employees. See Note.)	61.6	26.7
35450 02	Machine tool accessories, n.s.k. (For companies with less than 10 employees. See Note.)	19.6	

Product code	Product	Total shipments including interplant transfers			
		1967		1963

35482 13	Over 7" blade	91.4	2.6	[12]137.7	[12]7.4
	Armature mounted on other than sleeve bearings:				
35482 15	7" blade and smaller	(NA)	10.2	([12])	([12])
35482 17	Over 7" blade	525.4	14.5	([12])	([12])
35482 18	Saws--jig, saber, reciprocating	1,476.0	23.9	1,175.7	18.3
35482 29	Other electric-powered handtools	(X)	20.5	(X)	9.9
35482 34	Parts, attachments, and accessories for electric-powered handtools (sold separately) excluding saw blades, drills, screwdrivers, etc.	(X)	49.2	(X)	45.5
	Pneumatic:				
35482 35	Drills, screwdrivers and nut-runners	186.8	27.9	105.2	17.7
35482 37	Percussion tools (such as runners, riveters, chippers, scalers, holder-ons)	85.1	13.3	55.6	9.1
35482 41	Impact wrenches	(NA)	24.4	96.7	17.0
35482 43	Grinders, polishers, sanders	96.8	13.8	93.5	12.8
35482 49	Other pneumatic-powered handtools	(X)	29.2	(X)	19.7
35482 51	Parts, attachments, and accessories for pneumatic-powered handtools (sold separately) excluding drills, screwdrivers, etc	(X)	47.5	(X)	46.0
35482 61	Power-actuated handtools	(NA)	3.4	50.9	2.1
35482 00	Power-driven handtools, including parts and attachments, n.s.k.	(X)	18.9	(X)	2.7
35483 --	Welding and cutting apparatus, except electric, total	(X)	69.6	(X)	54.7
35483 23	Gas type cutting apparatus, including machines	(X)	29.4		
35483 25	Gas type welding apparatus, including machines	(X)	22.9	(X)	54.1
35483 29	Other nonelectric welding and cutting equipment	(X)	13.4		
35483 00	Welding and cutting apparatus, except electric, n.s.k.	(X)	3.8	(X)	0.6
35484 11	Automotive maintenance equipment (such as motor analyzers, wheel balancers, sparkplug cleaners, wheel spinners, frame straighteners, etc.)	(X)	58.1	(X)	47.7
35485 --	Other metalworking machinery, total	(X)	86.2	(X)	36.6
35485 00	Drawing machines, draw benches, and machines for weaving and other wire fabricating:				
	As reported on the census of manufactures[1]	(X)	52.8	(X)	28.9
	As reported on Census Form MQ-35W[1]	(X)	42.9	(X)	21.3
35485 98	All other metalworking machinery, except machine tools[13]	(X)	33.4	(X)	7.7
35480 00	Metalworking machinery, n.s.k. (For companies with 10 or more employees. See Note.)	(X)	40.4		
35480 02	Metalworking machinery, n.s.k. (For companies with less than 10 employees. See Note.)	(X)	7.4	(X)	20.9

See footnotes on next page.

TABLE 6A-1. Quantity and Value of Shipments by All Producers: 1967 and 1963—Continued

Footnotes for table 6A-1--35C

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated.

[1]For these products, data were also collected on Census quarterly Form MQ35W. In lieu of asking for detailed statistics on these products in the census of manufactures, respondents were asked to report only value of shipments for specified classes of products for which separate figures had previously been collected on the quarterly Form MQ35W. In most cases, the value figures reported in the census of manufactures for each class of products agreed closely with the corresponding figures reported in the quarterly survey. However, there were some differences between the census figures and the quarterly survey figures. These variations were due primarily to the following reasons:

a. Census of manufactures reports correctly including all accessories or attachments ordered and shipped with the machine. In some cases the quarterly survey represents only the value of the basic machine. This is the most significant factor for these differences.
b. Use of different bases for reporting value (company sales vs. factory production).
c. Use of estimates in reporting data on the quarterly survey, whereas census of manufactures figures generally represent more exact shipments figures.
d. Better coverage in the census of manufactures program.

The nomenclature used to describe products classified in industry 3541 in Current Industrial Reports Series MQ-35W, Metalworking Machinery, was revised for some products between 1963 and 1967. Accordingly, these data may not be directly comparable.

See table 6A-2 for more detailed product data.

[2]The definitions of product classes 35441 and 35442 have been revised. Product code 35442 11, Diecasting dies(molds), was included through 1966 in product class 35441 but is now included in product class 35442.

[3]1963 data for product code 35441 19, standard catalog components and parts for jigs and fixtures are included with product codes 35441 73 and 35441 79, Standard catalog components and parts for dies.

[4]Excludes industrial molds produced and consumed in the same establishment.

[5]For 1963 "combination drills and countersinks" were included with "twist drills".

[6]For 1963 "gun drills and gun reamers" were included with "other types of metal cutting tools."

[7]Not directly comparable. For 1967, shell mills are included with "milling cutters, n.e.c." For 1963, they were included with "end mills."

[8]Single point tools are cutting tools with integral or bonded shank and cutting element; either square, rectangular, round or other cross section; single or double end; used for turning, planing, drilling, boring, shaping, shaving, forming, threading, cutting off, trepanning, etc.; (excludes circular form tools, and all mechanical holding devices and indexible inserts).

[9]Blanks are unground material, as cast or formed from which a solid tool or cutting tip can be made. Tips are a finished or semifinished form of blank to be brazed, soldered or otherwise bonded to a shank to form a cutting tool. Inserts are replaceable, machanically held cutting components of cutting tools, ground on all surfaces (precision ground); or top and bottom only (utility ground). (Includes only those items sold separately.)

[10]For 1963, code 3545265 "micrometers and calipers" was included with code 35452 98 "other machinists' precision tools."

[11]In 1963, product codes 35482 05, 35482 07, and 35482 09 are combined with comparable drills with armature mounted primarily on sleeve bearings.

[12]In 1963, product codes 35482 15 and 35482 17 are combined respectively with product codes 35482 11 and 35482 13.

[13]A major portion of this value represents metalworking assembly and automation equipment, not elsewhere classified.

TABLE 6A-2. Total Shipments (Including Exports) of Metalworking Machinery: 1967 and 1963

1967 product code	Product	1967		1963	
		Quantity (number of machines)	Value ($1,000)	Quantity (number of machines)	Value ($1,000)
	METALWORKING MACHINERY, TOTAL	311,472	1,869,298	198,597	967,403
	Average value under $1,000	193,821	49,101	125,316	32,648
	Average value $1,000 or over	117,651	1,820,197	73,281	934,755
3541 pt.	Metal-cutting type, total	236,167	1,373,178	139,922	657,877
	Average value under $1,000	150,153	36,759	89,543	22,450
	Average value $1,000 or over	86,014	1,336,419	50,379	635,427
35411 --	Boring machines, total	1,813	117,837	1,750	67,930
	Horizontal boring, drilling, and milling machines:				
35411 11	Table type			144	12,625
35411 13-19	Rotary table type, floor type, and all other	484	66,361	[1]137	[1]5,800
35411 21-29	Vertical boring and turning mills (including vertical turret lathes)			168	15,709
35411 51-59	Precision boring machines	498	23,046	411	15,414
35411 71-73	Jig boring machines	593	26,642	499	17,000
35411 91-99	All other boring machines[1]	238	1,788	391	1,382
35412 --	Drilling machines, total	48,747	122,820	24,358	52,018
	Average value under $1,000	40,938	9,065	20,521	4,041
	Average value $1,000 or over	7,809	113,755	3,837	47,977
	Sensitive drilling machines:				
35412 11	Bench type:				
	Average value under $1,000	1,643	579	5,787	1,344
	Average value $1,000 or over	141	343	450	632
35412 15	Floor and pedestal type:				
	Average value under $1,000	(2)	(2)	544	191
	Average value $1,000 or over	1,397	6,080	1,089	5,105
	Vertical (upright) drilling machines:				
35412 21	Plain-upright:				
	Average value under $1,000	(2)	(2)	13,429	2,195
	Average value $1,000 or over	674	9,463	222	796
35412 25	Indexing turret head	2,239	25,256	(3)	(3)
35412 23	Heavy duty (manufacturing)	(D)	(D)	177	1,010
35412 29	All other vertical (upright) drilling machines	(2)	(2)	[3]256	[3]6,577
	Radial drilling machines:				
	Plain and universal:				
35412 31	Under 13" column	[2]311	[2]3,773		
35412 35	13" column and over	398	5,688	[4]476	[4]4,977
35412 49	All other radial drilling machines				
	Multiple spindle drilling machines (cluster of spindles driven from one central power unit):				
35412 51-55	Adjustable joint, fixed center and rail mounted	405	7,671	[4]215	[4]3,042
35412 61	Automatic drilling machines (combination, horizontal-vertical, opposed heads)	[2]860	[2]20,459	[4]267	[4]11,821
35412 69	All other automatic multiple-spindle drilling machines	[1]64	[1]2,706	22	668
35412 81-89	Deep-hole drilling machines	(D)	(D)	[4]1,424	[4]13,660
35412 99	All other drilling machines	[2]40,176	[2]27,429		
35413	Gear-cutting machines (all with an average value $1,000 or over), total	1,556	63,851	1,371	39,534
35413 71	Gear-tooth finishing machines	520	16,255	531	11,674
35413 11,13	Gear hobbers-horizontal and vertical	368	11,336	279	7,501
35413 31-59,99	All other gear cutting machines	668	36,260	561	20,359
35414 --	Grinding and polishing machines (except gear-tooth grinding, lapping, polishing, and buffing machines), total	91,417	247,760	52,446	137,040
	Average value under $1,000	69,344	7,386	39,544	4,929
	Average value $1,000 or over	22,073	240,374	12,902	132,111
	External cylindrical grinding machines:				
35414 11	Plain	570	19,569	225	7,097
35414 13	Universal	795	13,979	318	6,965
35414 15, 16	Grinders - roll and centerless	636	27,993	483	15,755
35414 19	All other	362	24,511	311	15,637
	Surface grinding machines:				
35414 31	Rotary table type	729	16,805	583	7,830
35414 33	Reciprocating table type (including face grinders)[5]	8,277	38,798	4,229	20,098
35414 39	All other surface grinding machines (including planer type)	101	792	50	232

See footnotes at end of table.

TABLE 6A-2. Total Shipments (Including Exports) of Metalworking Machinery: 1967 and 1963—Continued

1967 product code	Product	1967 Quantity (number of machines)	1967 Value ($1,000)	1963 Quantity (number of machines)	1963 Value ($1,000)
3541 - --	Metal-cutting type--Continued				
35414 --	Grinding and polishing machines (except gear-tooth grinding, lapping, polishing, and buffing machines)--Continued				
35414 43	Bench, floor, and snag grinders:				
	Bench	[6]54,099	[6]3,526	[7]28,136	[7]1,737
35414 45	Floor and snag grinders:				
	Average value under $1,000	([5])	([5])	2,897	704
	Average value $1,000 or over	[6]732	[6]1,964	122	279
35414 51	Tool and cutter grinding machines:				
	Universal[5]	1,859	7,900	1,106	4,173
35414 55	Special (broach, drilling, mills, saw, hob, and tap):				
	Average value under $1,000	5,058	1,529	1,400	638
	Average value $1,000 or over	934	7,654	777	5,427
35414 65	Polishing and buffing machines:				
	Floor-type:				
	Average value under $1,000	237	94	426	133
	Average value $1,000 or over	716	3,022	721	2,148
35414 61,63, 66, 67, 69	All other polishing and buffing machines (including speed lathes; and abrasive belt, drum, and disc; bench; and swing frame, sheet metal and tube polishing types):				
	Average value under $1,000	7,222	1,199	[8]3,300	[8]6,396
	Average value $1,000 or over	1,588	8,869		
35414 75	Honing and lapping machines:				
	Honing machines (except gear honing), internal	[5]1,700	[5]7,557	[1]1,718	[1]4,661
35414 79	Flat surface lapping machines[5]				
35414 76-78,81, 83	All other honing and lapping machines (including external and combination boring and turning honing machines and cylindrical surface lapping machines, except gear lapping)[5]	744	6,054	[8]438	[8]2,736
35414 21-25,41, 49, 71,91-99	All other grinding machines (including internal cylindrical, disc and thread grinders):				
	Average value under $1,000[5]	2,634	1,040	[8]3,520	[8]793
	Average value $1,000 or over	2,424	54,905	1,686	33,601
35415 --	Lathes, total	27,596	334,012	19,656	154,763
	Average value under $1,000	6,509	3,870	7,311	4,257
	Average value $1,000 or over	21,087	330,142	12,345	150,506
35415 11	Bench lathes (except bench turret lathes)	[9]5,189	[9]2,647	[1]5,299	[1]4,991
	Manufacturing and toolroom lathes:				
	Floor-engine-toolroom (light and heavy duty):				
35415 21	Up to and including 16" swing over cross slide:				
	Average value under $1,000	1,052	999	2,183	1,864
	Average value $1,000 or over	11,947	57,425	6,823	33,333
35415 23	17" to 23" swing	383	16,340	324	6,471
35415 25-29	24" swing and over	126	15,393	55	2,837
35415 33	Gap lathes				
35415 35-39	All other manufacturing and toolroom lathes, including manufacturing (multi-tool automatics) and hollow spindle (oilfield)	(D)	(D)	[10]180	[10]3,267
	Turret lathes:				
35415 51-55	Bench and floor light duty type (with turret attachment) and saddle type	[11]1,430	[11]23,157	[10]1,484	[10]17,015
35415 53	Ram type	698	14,125		
	Automatic chucking lathes:				
35415 61	Single spindle	1,824	77,205	695	25,413
35415 65	Multiple spindle	340	26,449	195	16,233
	Automatic between center lathes:				
35415 71	Single spindle	224	8,328	174	5,757
35415 75	Multiple spindle	(D)	(D)		
35415 81 & 88	Screw (bar) machines	2,611	70,053	1,278	30,494
35415 77,87, 89-99	All other lathes (including right angle carriage lathes (T-lathes) and boring and combination boring and turning lathes)	[11]753	[11]12,484	[10]966	[10]7,088
35416 --	Milling machines, total	24,005	234,267	16,683	106,126
35416 11	Bench and hand milling machines (including knee-type bench milling machines):				
	Average value under $1,000	962	493	1,087	458
	Average value $1,000 or over	335	1,088	399	1,179

See footnotes at end of table.

TABLE 6A-2. Total Shipments (Including Exports) of Metalworking Machinery: 1967 and 1963—Continued

1967 product code	Product	1967 Quantity (number of machines)	1967 Value ($1,000)	1963 Quantity (number of machines)	1963 Value ($1,000)
3541 - --	Metal-cutting type--Continued				
	Milling machines--Continued				
	Knee-type milling machines (except bench type):				
	Horizontal:				
35416 21	Plain	1,200	19,489	609	10,729
35416 23	Universal	199	4,058	206	3,604
	Vertical:				
35416 26	2 horsepower and under:				
	Average value under $1,000	(12)	(12)	[13]7,800	[13]15,932
	Average value $1,000 and over	12,606	27,117		
35416 28	Over 2 horsepower	306	8,485	252	5,574
35416 29	All other knee-type milling machines	794	7,816	[13]43	[13]483
35416 71	Ram type			777	4,725

35416 95	Engraving machines, drum type miller, cam millers, and pantograph millers			[13]74	[13]460
35416 41, 53-55, 61, 91-93, 99	All other milling machines (including planer type, skin millers, spar millers, and thread milling machines)			[13]4,097	[13]22,464
35418 pt.	All other metal-cutting type machine tools (except those designed primarily for home workshops, laboratories, garages, etc.), total	41,033	252,631	23,658	100,466
	Average value under $1,000	28,028	12,249	17,353	6,485
	Average value $1,000 or over	13,005	240,382	6,305	93,981
	Broaching machines:				
	Hydraulic:				
35418 10	Horizontal	122	10,577	50	2,078
35418 12, 13	Vertical and rotary			72	2,697
35418 14-16	Mechanical (horizontal, vertical, and continuous chain type)	61	4,630	36	2,610
35418 19	All other broaching machines	9	365	(14)	(14)
	Shapers (except gear shapers) and slotters:				
35418 29	Horizontal (plain and universal) - under 16" stroke	[15]192	[15]2,438	385	417
35418 30,33,35	All other shapers and slotters, including vertical and horizontal 16" stroke and over			[16]130	[16]1,360
	Sawing and cutoff machines:				
35418 37	Power hack saws:				
	Average value under $1,000	3,971	654	2,156	338
	Average value $1,000 or more	633	2,387	499	1,711
35418 39	Circular cutoff saws	[15]324	[15]1,322	[17]130	[17]1,177
35418 41	Abrasive cutoff saws:				
	Average value under $1,000	1,602	675	1,178	629
	Average value $1,000 or over	774	2,904	502	1,922
35418 43, 45	All other sawing and cutoff machines, including band saw cutoff saws:				
	Average value under $1,000	10,456	6,159	[17]6,445	[17]13,355
	Average value $1,000 or over	3,391	21,928		
	Tapping machines:				
35418 49	Vertical	[15](D)	[15](D)	[18]204	[18]807
35418 50	Horizontal and radial arm	-	-		
35418 53, 55	All other tapping machines (including nut, coupling, and shell)	[1]110	[1]1,748	[18]163	[18]1,753
35418 47	Contour saw and filling machines (including band type)	[9]2,443	[9]883	[1]5,699	[1]6,007
	Thread machines (except thread millers and thread grinders):				
35418 59	Pipe and nipple	[15]432	[15]3,784	[19]284	[19]2,105
35418 57	Bolt			(19)	(19)
35418 61	All other threading machines			[19]4,156	[19]2,103
35418 63	Rifling machines	-	-	-	-
35418 67	Keyseating machines	[15]269	[15]2,075	277	1,830
35418 69	Pointing, chamfering, facing, shaving, grooving, counter sinking, burring, forming, and drilling machines (excluding gear-tooth machines)				
35418 73	Transfer machines containing multiple stations for boring, broaching, drilling, grinding, turning, milling, tapping, reaming, counter boring, measuring, etc., (including way, rotary index, center column, trunnion, plain, or pallet transfer types)	637	131,708	365	43,637
35418 21-27,65	Planers and centering machines	(D)	(D)	[14]53	[14]1,694
35418 70, 35418 75-90	All other metal-cutting machines[20]	[15]11,183	[15]41,683	[16]874	[16]12,236

See footnotes at end of table.

TABLE 6A-2. Total Shipments (Including Exports) of Metalworking Machinery: 1967 and 1963—Continued

1967 product code	Product	1967 Quantity (number of machines)	1967 Value ($1,000)	1963 Quantity (number of machines)	1963 Value ($1,000)
3542 pt. 3548 pt.	Metal-forming type, total	75,305	496,120	58,675	309,526
	Average value under $1,000	43,668	12,342	35,773	10,198
	Average value $1,000 or over	31,637	483,778	22,902	299,328
35421 --	Punching, shearing, bending, and forming machines, total	22,938	114,365	21,527	88,046
	Punching and shearing machines, total	8,553	56,923	8,501	42,809
	Average value under $1,000	4,706	1,480	5,632	2,079
	Average value $1,000 or over	3,847	55,443	2,869	40,730
35421 09	Manually operated:				
	Average value under $1,000	(21)	(21)	1,023	183
	Average value $1,000 or over	(D)	(D)	(22)	(22)
35421 11	Power:				
	Punches (includes combination punching and shearing machines)	[1]818	[1]15,971	[21]974	[21]12,424
35421 13	Plate shearing machines (squaring, slitting, etc.)	1,833	23,396	1,286	12,426
35421 15	Bar and angle shearing machines	(D)	(D)	68	2,713
35421 17	Rotary shearing machines[21]	460	6,704	127	4,188
35421 19	Other punching and shearing machines:				
	Average value under $1,000[21]	4,706	1,480	4,609	1,896
	Average value $1,000 or over	271	6,159	[22]414	[22]8,979
	Bending and forming machines, total	14,385	57,442	13,026	45,237
	Average value under $1,000	9,168	3,570	9,676	4,170
	Average value $1,000 or over	5,217	53,872	3,350	41,067
	Power:				
	Bending rolls:				
35421 31	Sheet and plate[23]	764	8,537	695	16,663
35421 35	Angles, bars, and shapes	2,441	27,990	[23]71	[23]804
35421 37	Bending brakes and folders[23]			1,043	8,463
35421 41	Rotary bending and forming machines	[1]668	[1]3,538	[23]184	[23]1,580
35421 45	Rotary head and ram bending machines (pipe, bar, etc)	[1]346	[1]5,043	[23]251	[23]2,426
35421 33, 39, 43, 47, 49, 51	Other bending and forming machines (including power and manual):				
	Average value under $1,000[23]	9,168	3,570	10,782	15,301
	Average value $1,000 or over	998	8,764		
35422 --	Presses, including forging, total	41,834	240,058	28,563	135,996
	Average value under $1,000	28,281	6,506	19,222	3,577
	Average value $1,000 or over	13,553	233,552	9,341	132,419
	Mechanical:				
	Open inclinable gap type:				
35422 11	9 tons and under:				
	Average value under $1,000	7,836	995	2,803	4,215
	Average value $1,000 or over	(D)	(D)		
35422 12	10 to 50 tons	(D)	(D)	[24]2,017	[24]7,441
35422 13	51 tons and over	2,173	24,643	[24]1,048	[24]10,677
	Vertical straight sided and arch frame, excluding knuckle joint (including cam and crank):				
	Single action:				
	Single point:				
35422 14	200 tons and under	195	3,756	123	3,511
35422 15	201 tons to 300	44	2,347	71	7,900
35422 16	301 tons and over	59	8,347		
	Two point:				
35422 17	300 tons and under	529	21,844	401	18,943
35422 18, 19	301 tons and over	192	30,013		
35422 23, 26	Four point	149	23,715	100	12,869
35422 29, 30, 32-38	Double and triple action (including toggle)	107	19,932	101	15,961
	Automatic high speed presses, strip or coil fed:				
35422 43	50 tons and under	[25]643	[25]6,865	[24]185	[24]3,739
35422 44, 45	51 tons and over	393	17,582	182	7,739
35422 39, 40	Knuckle joint	517	17,825	15	577
35422 41	Horizontal			(26)	(26)
35422 42	Gap and horn type			[24]272	[24]4,454
35422 58	Bulldozers			(26)	(26)
35422 46-47	Transfer feed presses (excluding automated lines of standard equipment)			(24)	(24)
35422 59	All other mechanical presses (including end wheel type):				
	Average value under $1,000	413	135	[24,26]4,527	[24,26]1,207
	Average value $1,000 or over	306	8,191	[26,27]417	[26,27]6,949

See footnotes at end of table.

TABLE 6A-2. Total Shipments (Including Exports) of Metalworking Machinery: 1967 and 1963—Continued

1967 product code	Product	1967		1963	
		Quantity (number of machines)	Value ($1,000)	Quantity (number of machines)	Value ($1,000)
3542- --	Metal-forming type--Continued				
35422 --	Presses, including forgings--Continued				
	Hydraulic and pneumatic presses (metalworking only):				
	Vertical single action:				
35422 61-63	Housing or straight column type	[25]246	[25]5,372	[28]515	[28]6,347
35422 64-66	Open rod type	333	3,425	154	1,878
	Gap or C-frame:				
35422 68	50 tons and under	[25]1,970	[25]4,915	[28]2,214	[28]5,720
35422 69, 70	51 tons and over	130	2,199	92	1,135
35422 71, 72	Vertical double action (2 slide)	226	6,025	([29])	([29])
35422 73	Vertical triple action			([29])	([29])
35422 74-76	Horizontal (except extrusion) type			[28]25	[28]332
35422 77	Extrusion presses			35	4,812
35422 81	Stretch wrap forming machines			([29])	([29])
35422 79	All other hydraulic presses:				
	Average value under $1,000	([25])	([25])	[28,29]929	[28,29]410
	Average value $1,000 or over	999	12,233	[29]641	[29]7,663
35422 91	Manual presses (arbor, straightening, forging, and assembling)	[1]14,057	[1]1,985	11,696	1,517
35422 00	All other presses (average value under $1,000)	[25]5,814	[25]3,278	(NA)	(NA)
35423 pt.	Other metal-forming machine tools, total	7,566	98,831	6,716	64,164
	Forging machines (except presses), total	810	29,644	825	22,347
35423 27	Headers and upsetters	663	20,925	825	22,347
35423 30	Swaging machines				
35423 12-23,29, 35	Other forging machinery, including hammers and forging rolls	[1]147	[1]8,719		
35423 49	Riveting machines (except hand held portable types):				
	Average value under $1,000	434	282	[30]2,208	[30]4,090
	Average value $1,000 or over	3,418	11,800		
35423 51, 52, 56	Metal container making machines (including can and barrel and drum)	[31]1,078	[31]26,233	1,169	20,795
35423 57	Die casting machines	382	20,618	261	12,121
35423 43	Thread rolling machinery	[31 32]1,317	[31 32]5,622	244	2,852
35423 45	Spinning lathes (flow turn, hydrospin and spin forge)			[30]2,009	[30]1,959
35423 47	Marking machines, knurling machines, etc.				
35423 61, 73, 75, 79, 81	Metal deposit forming machines (electroforming), high energy rate metal-forming machines (electromagnetic discharge), and mechanical-pneumatic or hydraulic forming machines	127	4,632	(NA)	(NA)
35485 pt.	Other metalworking machinery, except machine tools, total	2,967	42,866	1,869	21,320
35485 41	Machines for weaving and other wire fabricating (barbed wire, poultry netting, woven wire fence machine, etc.)	1,776	18,815	1,542	12,900
35485 51	Wiredrawing machines and draw benches	1,191	24,051	327	8,420

See footnotes on next page.

TABLE 6A-2. Total Shipments (Including Exports) of Metalworking Machinery: 1967 and 1963—Continued

Footnotes for table 6A-2--35C

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available.

[1] Includes some machines with an average value of under $1,000.

[2] For 1967, machines with an average value of less than $1,000 have been included with "All other drilling machines" (code 3541299).

[3] 1963 data for "Indexing and turret head vertical (upright) drilling machines" (code 3541225) are included with "All other vertical (upright) drilling machines" (code 3541229).

[4] For 1963, some machines with an average value of under $1,000 for codes 3541231, 3541253, and 3541261 are included with "All other drilling machines" (code 3541299).

[5] Machines with an average value of less than $1,000 have been included with "All other grinding and polishing machines" (code 3541499).

[6] 1967 data for "Bench grinders (average value $1,000 and over)" (code 3541443) are included with "Floor and snag grinders (average value $1,000 and over)" (code 3541445).

[7] For 1963, all "Bench grinders" (code 3541443) have an average value under $1,000.

[8] For 1963, machines with an average value of less than $1,000 for "Swing frame, sheet metal, and tube polishing" (code 3541467) have been included with "All other grinding and polishing machines" (code 3541499). Data for "Bench type" (code 3541461), "Abrasive belt, drum, and disc" (code 3541463), "Speed lathes" (code 3541466), and "All other polishing and buffing machines" (code 3541469) include some machines with an average value of under $1,000.

[9] For 1967, figures for machines with average value over $1,000 are withheld to avoid disclosing operations of individual companies.

[10] For 1963, some machines with an average value of under $1,000 for "Gap lathes" (code 3541533) and "Bench and floor light duty type with turret attachments" (code 3541551) are included with "All other lathes" (code 3541599).

[11] For 1967, machines with an average value of less than $1,000 have been included with "All other lathes" (code 3541599).

[12] 1967 data are included with "All other milling machines" (code 3541699).

[13] For 1963, some machines with an average value of under $1,000 are included with "All other milling machines" (code 3541699).

[14] 1963 data for "All other broaching machines" (code 3541819) are included with "Planers and centering machines" (codes 3541821-27 and 65).

[15] For 1967, machines with an average value of less than $1,000 have been included with "All other metal-cutting machines" (code 3541890).

[16] 1963 data for "Vertical shapers and slotters" (code 3541833) and "All other shapers and slotters" (code 3541835) are included with "All other metal-cutting machines" (code 3541890).

[17] For 1963, machines with an average of under $1,000 are included with "All other sawing and cutoff machines, including band saw cutoff saws" (codes 3541843 and 3541845).

[18] For 1963, machines with an average value of under $1,000 for "Vertical tapping machines" (code 3541849) are included with "All other tapping machines" (code 3541855).

[19] For 1963, all "Bolt threading machines" (code 3541857) and "Pipe and nipple threading machines (with an average value of under $1,000)" (code 3541859) are included with "All other threading machines" (code 3541861).

[20] Includes reaming machines (except rifle reaming); screw and nut slotting machines; electroerosion machines; ultrasonic machines; and electrolytic machines.

[21] Machines with an average value of less than $1,000 have been included with "Other punching and shearing machines" (code 3542119).

[22] For 1963, "Manually operated punching and shearing machines" (code 3542109) valued at $1,000 or over are included with "Other punching and shearing machines" (code 3542119) valued at $1,000 or more.

[23] Machines with an average value of less than $1,000 have been included with "Other bending and forming machines" (codes 3542149 and 3542151).

[24] For 1963, machines with an average value of under $1,000 are included with "All other mechanical presses" (code 3542259). In addition, data for codes 3542246, 47 are included with codes 3542243-45.

[25] For 1967, machines with an average value of less than $1,000 have been included with "All other presses" (code 3542200).

[26] 1963 data for "Horizontal high speed presses" (code 3542241) and "Bulldozer high speed presses" (code 3542258) are included with "All other mechanical presses" (code 3542259).

[27] Includes 34 "End wheel-type mechanical presses" valued at $247(000) for 1963.

[28] For 1963, machines with an average value of under $1,000 for codes 3542261, 3542268, and 3542274 are included with "All other hydraulic presses" (code 3542279).

[29] 1963 data are included with "All other hydraulic presses" (code 3542279).

[30] For 1963, some machines with an average value of under $1,000 are included with "Spinning lathes and marking machines" (codes 3542345 and 3542347).

[31] For 1967, machines with an average value of less than $1,000 have been included with "Marking machines, knurling machines, etc." (code 3542347).

[32] For 1967, "Spinning lathes" (code 3542345) includes some machines with an average value of under $1,000.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments	
	1967	1963
BORING MACHINES (35411)

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0.....	AA	$10.0 to $20.0.....	EE
$2.0 to $5.0.....	BB	$20.0 to $50.0.....	FF
$5.0 to $10.0.....	CC	$50.0 and over.....	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1] This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6 D showed those States with $1 million or more reported shipments.

TABLE 6C. Product Classes–Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

(In millions of dollars)

Code	Product class	1967	1966[1]	1965[1]	1964[1]	1963	1958	1954	1947

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2]Diecasting dies (molds) are included in 1967 in product class 35442. For 1966 and prior years, they were included in product class 35441.

[3]Product class 35440 included with product class 35441 for 1958.

[4]Excludes industrial molds made and used in the same establishment.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

976000	Materials, parts, containers and supplies, n.s.k.[5]	.....	(X)	54.7	(X)	28.1

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated. (Z) Under 50 thousand.

[1]The figures are understated by $5 million or less because of apparent undercoverage of carbon steel pipe and tubes.

[2]Included with material code 970099, "All other materials and components" to avoid disclosing figures for individual companies.

[3]Included with material code 970099, "All other materials and components, etc."

[4]For industry 3541, 35.1 thousand short tons of iron castings (code 332011) were produced and consumed in the same establishment in 1967. No other data are available for 1967 on the quantities of castings, iron and steel forgings, or electric motors and generators produced and consumed in the same establishment. For 1963, the following data are available: industry 3541--iron castings (code 332011), 33.8 thousand short tons; and industry 3548--other fractional horsepower electric motors (code 362115), 2,007.2 thousand units.

[5]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967 this includes estimates for companies that were not mailed report forms.

[6]Included with material code 970099, "All other materials and components, etc." The value of these individual materials is less than $2.5 million.

	Purchased electric energy:					
	Quantity.....	Million kw.-hrs..	677.4	841.8	580.9	428.3
	Cost.....	Million dollars..	9.6	14.6	8.3	5.1
	Quantity of electric energy generated less quantity sold.....	Million kw.-hrs..	10.3	0.7	0.8	0.4
	Total energy used for heat and power[1].....	Million kw.-hrs. equivalent.....	3,022.3	3,869.0	3,439.4	2,396.0

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Represents the quantity of purchased electric energy and the kilowatt-hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization–the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization–the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments	All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new
			Number	Payroll	Number	Man-hours	Wages				
		(number)	(1,000)	(million dollars)	(1,000)	(millions)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)
3541	MACHINE TOOLS, METAL-CUTTING TYPES										
	ENTIRE INDUSTRY	903	87.2	759.9	60.5	131.8	476.5	1 391.3	766.9	2 127.2	78.7
	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION	772	66.7	580.3	45.8	98.4	358.4	1 062.9	595.0	1 634.1	61.1

See footnotes at end of table.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967–Continued

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Man-hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)
35482	POWER-DRIVEN HANDTOOLS, INCL. PARTS, ATTACHMENTS										
	(PRIMARY PRODUCT CLASS OF ESTABLISHMENT).	69	22.5	143.3	16.2	32.0	91.7	326.0	194.5	506.3	21.2
	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION. .	57	18.8	118.8	13.8	27.4	76.9	274.2	172.4	435.0	18.4
35483	WELDING AND CUTTING APPARATUS, EXCEPT ELECTRIC										
	(PRIMARY PRODUCT CLASS OF ESTABLISHMENT).	25	2.9	21.0	2.0	4.2	12.5	42.9	24.6	67.6	1.4
	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION. .	21	2.8	20.1	1.9	4.0	12.1	40.6	23.5	64.5	1.3
35484	AUTOMOTIVE MAINTENANCE EQUIPMENT										
	(PRIMARY PRODUCT CLASS OF ESTABLISHMENT).	23	2.2	15.3	1.4	2.8	7.9	34.1	19.5	51.6	2.7
	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION. .	20	1.8	12.4	1.1	2.3	6.5	27.9	16.9	43.4	2.4
35485	OTHER METALWORKING MACHINERY										
	(PRIMARY PRODUCT CLASS OF ESTABLISHMENT).	38	3.2	27.1	2.3	4.9	16.0	47.1	42.3	90.8	3.2
	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION. .	24	1.7	15.5	1.1	2.5	8.6	25.9	24.8	51.5	2.1

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 9. Establishments and Production Workers for Selected Metalworking Operations: 1967

(To be published in a separate subject chapter titled "Selected Metalworking Operations.")

SPECIAL INDUSTRY MACHINERY, EXCEPT METALWORKING MACHINERY

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3551--Food Products Machinery
3552--Textile Machinery
3553--Woodworking Machinery
3554--Paper Industries Machinery
3555--Printing Trades Machinery and Equipment
3559--Special Industry Machinery, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3551--FOOD PRODUCTS MACHINERY

This industry comprises establishments primarily engaged in manufacturing machinery for use by the food products and beverage manufacturing industries in the preparation, canning, or packaging of food products; and parts and attachments for such machinery. Establishments primarily engaged in manufacturing industrial refrigeration machinery are classified in Group 358. For a detailed list of products of industry 3551, refer to table 6A, product codes 3551111 to 3551381.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Food Products Machinery Industry in 1967 totaled $830 million. This included shipments of food products machinery (primary products), valued at $595 million, shipments of other products (secondary products) valued at $84 million, and miscellaneous receipts (mainly resales) of $152 million.

This industry's shipments of food products machinery (primary products) in 1967 represented 88 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 86 percent. Secondary products shipped by this industry in 1967 included special industry machinery, n.e.c. ($21 million), general industrial machinery, n.e.c. ($10 million) and fabricated platework (boiler shop products) ($5 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8.

Industry 3551 shipments of food products machinery (primary products) in 1967 represented 86 percent (coverage ratio) of these products valued at $690 million shipped by all industries. In 1963, the coverage ratio was 87 percent. Other industries shipping food products machinery (primary products) included industry 3559, Special Industry Machinery, N.E.C., $29 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3551, these establishments accounted for 1 percent of payroll and 1 percent of value added by manufacture.

3552--TEXTILE MACHINERY

This industry comprises establishments primarily engaged in manufacturing machinery for the textile industries, and extra parts, attachments, and accessories. Establishments primarily engaged in manufacturing domestic or industrial sewing machines are classified in industry 3636. For a detailed list of products of industry 3552, refer to table 6A, product codes 3552115 to 3552298.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Textile Machinery Industry in 1967 totaled $712 million. This included shipments of textile machinery (primary products), valued at $617 million, shipments of other products (secondary products) valued at $40 million, and miscellaneous receipts (mainly resales) of $54 million.

This industry's shipments of textile machinery (primary products) in 1967 represented 94 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 93 percent. Secondary products shipped by this industry in 1967 included gray iron castings ($7 million), and special industry machinery, n.e.c. ($6 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 63 percent of the total industry shipments are represented by plants specializing in product class 35521, textile machinery; and 32 percent in 35522, parts and attachments for textile machinery.

Industry 3552 shipments of textile machinery (primary products) in 1967 represented 95 percent (coverage ratio) of these products valued at $653 million shipped by all industries. In 1963, the coverage ratio was 94 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3552, these establishments accounted for 1 percent of payroll and 1 percent of value added by manufacture.

3553--WOODWORKING MACHINERY

This industry comprises establishments primarily engaged in manufacturing machinery for sawmills, planing mills, cabinet and furniture makers, patternmakers, and veneer workers. Establishments primarily engaged in manufacturing handtools such as planes, axes, drawknives, and handsaws are classified in Group 342; and portable power-driven handtools in industry 3548. For a detailed list of products of industry 3553, refer to table 6A, product codes 3553112 to 3553298.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Woodworking Machinery Industry in 1967 totaled $314 million. This included shipments of woodworking machinery (primary products), valued at $238 million, shipments of other products (secondary products) valued at $50 million, and miscellaneous receipts (mainly resales) of $26 million.

This industry's shipments of woodworking machinery (primary products) in 1967 represented 83 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 77 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 86 percent of the total industry shipments are represented by plants specializing in product class 35531, woodworking machinery (except home workshop).

Industry 3553 shipments of woodworking machinery (primary products) in 1967 represented 87 percent (coverage ratio) of these products valued at $274 million shipped by all industries. In 1963, the coverage ratio was 81 percent. Other industries shipping woodworking machinery (primary products) included industry 3541, Machine Tools, Metal-Cutting Type, $11 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3553, these establishments accounted for 1 percent of payroll and 2 percent of value added by manufacture.

3554--PAPER INDUSTRIES MACHINERY

This industry comprises establishments primarily engaged in manufacturing machinery for the pulp, paper, and paper product industries. Establishments primarily engaged in manufacturing printing trades machinery are classified in industry 3555. For a detailed list of products of industry 3554, refer to table 6A, product codes 3554011 to 3554081.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Paper Industries Machinery Industry in 1967 totaled $551 million. This included shipments of paper industries machinery (primary products), valued at $444 million, shipments of other products (secondary products) valued at $37 million, and miscellaneous receipts (mainly resales) of $70 million.

This industry's shipments of paper industries machinery (primary products) in 1967 represented 92 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 88 percent. Secondary products shipped by this industry in 1967 included special industry machinery, n.e.c. ($12 million) and gray iron castings ($4 million).

Industry 3554 shipments of paper industries machinery (primary products) in 1967 represented 86 percent (coverage ratio) of these products valued at $515 million shipped by all industries. In 1963, the coverage ratio was 90 percent. Other industries shipping paper industries machinery (primary products) consisted mainly of industry 3559, Special Industry Machinery, N.E.C., $35 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3554, these establishments accounted for 1 percent of payroll and 1 percent of value added by manufacture.

3555--PRINTING TRADES MACHINERY AND EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing machinery and equipment used by the printing and bookbinding trades. Establishments primarily engaged in manufacturing textile printing machinery are classified in industry 3552. For a detailed list of products of industry 3555, refer to table 6A, product codes 3555116 to 3555298.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Printing Trades Machinery Industry in 1967 totaled $752 million. This included shipments of printing trades machinery (primary products), valued at $619 million, shipments of other products (secondary products) valued at $16 million, and miscellaneous receipts (mainly resales) of $117 million.

This industry's shipments of printing trades machinery (primary products) in 1967 represented 98 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 95 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8.

Industry 3555 shipments of printing trades machinery (primary products) in 1967 represented 94 percent (coverage ratio) of these products valued at $656 million shipped by all industries. In 1963, the coverage ratio was 92 percent. Other industries shipping printing trades machinery (primary products) included industry 3069, Fabricated Rubber Products, N.E.C., $9 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3555, these establishments accounted for 1 percent of payroll and 2 percent of value added by manufacture.

3559--SPECIAL INDUSTRY MACHINERY, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing special industry machinery, not elsewhere classified, such as smelting and refining equipment, cementmaking, clayworking, cotton ginning, glass making, hat making, incandescent lamp making, leather working, paintmaking, rubber working, cigar and cigarette making, tobacco working, shoemaking, and stoneworking machinery. For a detailed list of products of industry 3559, refer to table 6A, product codes 3559111 to 3559593.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Special Industry Machinery, N.E.C., Industry in 1967 totaled $1,833 million. This included shipments of special industry machinery, n.e.c. (primary products), valued at $1,350 million, shipments of other products (secondary products) valued at $288 million, and miscellaneous receipts (mainly resales) of $195 million.

This industry's shipments of special industry machinery, n.e.c. (primary products) in 1967 represented 82 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 83 percent. Secondary products shipped by this industry in 1967 included general industrial machinery, n.e.c. ($38 million) and paper industries machinery ($35 million) and food products machinery ($29 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Industry 3559 shipments of special industry machinery, n.e.c. (primary products) in 1967 represented 81 percent (coverage ratio) of these products valued at $1,670 million shipped by all industries. In 1963, the coverage ratio was 74 percent. Other industries shipping special industry machinery, n.e.c. (primary products) included industry 3569, General Industrial Machinery, N.E.C., $24 million and industry 3551, Food Products Machinery $21 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3559, these establishments accounted for 1 percent of payroll and 1 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio

Note: In 1967, 1963, and 1958, the number of companies in industry 3551 was 611, 649, and 657, respectively; in industry 3552: 524, 529, and 513; industry 3553: 232, 245, and 251; industry 3554: 206, 204, and 192; industry 3555: 485, 463, and 421; industry 3559: 1,085, 1,074, and 1,025; The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard Notes: (NA) Not available. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. (*) These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliablility.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

TABLE 2. General Statistics, by Geographic Areas: 1967 and 1963–Continued

Footnotes for table 2--35D

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250 to 499 employees
CC - 500 to 999 employees
EE - 1,000 to 2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, "Explanation of Terms."

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.) - Represents zero.

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments: Total (million dollars)	Value of shipments: Primary products (million dollars)	Value of shipments: Secondary products (million dollars)	Value of shipments: Miscellaneous receipts (million dollars)	Value of shipments: Primary product specialization ratio Col. B / Col. B+C (percent)	Value of primary product shipments: Total, made in all industries (million dollars)	Value of primary product shipments: Made in this industry (million dollars)	Value of primary product shipments: Made in other industries (million dollars)	Value of primary product shipments: Coverage ratio Col. B / Col. F (percent)

Note: See Appendix, Explanation of Terms, for discussion of items.

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

See footnotes at end of table.

TABLE 5B. Industry-Product Analysis--Shipments by Product Class and Industry: 1967—Continued

Product class code	Class of products and miscellaneous receipts	All industries	Food products machinery (SIC 3551)	Textile machinery (SIC 3552)	Woodworking machinery (SIC 3553)	Paper industries machinery (SIC 3554)	Printing trades machinery (SIC 3555)	Special industry machinery, n.e.c. (SIC 3559)	All other industries
	Listing of the other industries with over $2 million shipments of the primary products--Continued								
3559-	3544 Special dies, tools, jigs, and fixtures.....	(X)	(X)	(X)	(X)	(X)	(X)	(X)	7.7
3559-	3561 Pumps and compressors.....	(X)	(X)	(X)	(X)	(X)	(X)	(X)	6.7
3559-	3564 Blowers and fans.....	(X)	(X)	(X)	(X)	(X)	(X)	(X)	(5-10)
3559-	3567 Industrial furnaces and ovens.....	(X)	(X)	(X)	(X)	(X)	(X)	(X)	12.7
3559-	3569 General industrial machinery, n.e.c.....	(X)	(X)	(X)	(X)	(X)	(X)	(X)	23.7
3559-	3599 Miscellaneous machinery, except electrical.....	(X)	(X)	(X)	(X)	(X)	(X)	(X)	4.2
3559-	3641 Electric lamps.....	(X)	(X)	(X)	(X)	(X)	(X)	(X)	(over 2)
3559-	3661 Telephone and telegraph apparatus.....	(X)	(X)	(X)	(X)	(X)	(X)	(X)	(over 2)
3559-	3731 Ship building and repairing.....	(X)	(X)	(X)	(X)	(X)	(X)	(X)	7.6
3559-	3861 Photographic equipment and supplies.....	(X)	(X)	(X)	(X)	(X)	(X)	(X)	(over 2)

Note: Data shown parenthetically are ranges expressed in millions of dollars.

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard Notes: - Represents zero. (X) Not applicable. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than $50 thousand.

[1] Includes, where appropriate, values for these 4-digit product groups for which either the symbol "D" or a value range, e.g., (2-5), (under 2), etc. appear above.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Unit of measure	Total shipments including interplant transfers			
			1967		1963	
			Quantity	Value (million dollars)	Quantity	Value (million dollars)
3551- --	FOOD PRODUCTS MACHINERY, TOTAL	.....	(X)	689.9	(X)	517.3
35511 --	Dairy and milk products plant machinery and equipment	.....	(X)	77.7	(X)	71.6
35511 11	Fluid milk bottling, filling, packaging and capping machines (glass, paper, and other materials)	.....	(X)	14.0	(X)	13.2
35511 12	Butter, cheese, dry milk, and ice cream packaging machines	No. of units...	173	1.9	718	4.8
35511 13	Uncasers and casers	...do.....	(1)	(1)	347	4.7
35511 19	Washing, sterilizing, capping, and other dairy bottling machines	...do.....	(NA)	1.0	(NA)	3.9
35511 43	Pasteurizers	...do.....	106	0.4	497	3.9
35511 51	Homogenizers	...do.....	(1)	(1)	288	1.8
35511 73	Ice cream freezers	...do.....	(NA)	24.7	4,955	11.8
35511 83	Butter and cheese processing plant machinery and equipment	...do.....	698	2.0	755	3.3
35511 91	Dry milk processing plant machinery and equipment	...do.....	(X)	126.7	58	4.6
35511 98	Other dairy and milk products processing plant machinery and equipment, including cream separators (capacity over 1,500 pounds per hour)	.....			(X)	18.2
35511 00	Dairy and milk products plant machinery and equipment, n.s.k.	.....	(X)	6.9	(X)	1.4
35512 --	Commercial food products machinery, total	1,000 units....	(X)	146.4	(X)	117.6
35512 11	Slicers	...do.....	29.3	13.8	20.5	9.8
35512 21	Choppers, grinders, cutters, dicers, and similar machines	...do.....	25.8	13.4	35.2	15.1
35512 31	Mixers and whippers (except drink mixers)	...do.....	16.3	15.2	13.7	11.0
35512 51	Parts and attachments for commercial food-preparation machines	.....	(X)	11.6	(X)	10.1
35512 41	Other commercial food-preparation machines, including tenderizers (power-driven)	.....	(X)	15.9	(X)	13.8
	Bakery machinery and equipment:					
35512 61	Dough mixers	No. of units...	(NA)	7.7	5,476	3.5
	Bake ovens:					
35512 71	Traveling tray	...do.....	167	4.8	106	4.6
35512 75	Other	...do.....	2,489	13.0	1,373	5.2
35512 81	Slicing machines[2]	...do.....	774	1.8	1,405	2.4
35512 85	Wrapping machines[2]	...do.....	388	3.8	314	4.6
35512 87	Continuous breadmaking equipment	.....	(X)	27.8	(X)	4.3
35512 91	Other bakery machinery and equipment	.....			(X)	28.6
35512 00	Commercial food products machinery, n.s.k.	.....	(X)	17.6	(X)	4.7
35513 --	Other industrial food products machinery, including parts and attachments for all types of industrial food products machinery, total	.....	(X)	391.2	(X)	300.5
35513 11	Meat-packing and poultry-packing plant machinery and equipment, including killing, dehairing, stuffing, cooking, rendering, cutting, pressing, grinding, chopping, and canning machines, etc.	.....	(X)	49.6	(X)	32.7
	Fruit- and vegetable-canning and packing machinery:					
35513 23	Preparation machinery	.....	(X)	35.1	(X)	17.0
35513 25	Wrapping, filling, and sealing machinery	.....	(X)	19.9	(X)	6.7
35513 27	Packing machinery	No. of units...	1,630	6.8	759	5.5
35513 29	All other fruit- and vegetable-canning machinery	.....	(X)	9.6	(X)	12.8
	Flour mill and grain mill machinery:					
35513 33	Packing and packaging machinery	.....	(X)	4.2	(X)	32.6
35513 39	Other flour mill and grain mill machinery	.....	(X)	15.5		
	Sugar plant machinery, including cane and beet mills, crushers, pulverizers, crystallizers, granulators, etc:					
35513 43	Packing and packaging machinery	.....	(X)	11.3	(X)	13.9
35513 49	Other sugar-plant machinery	.....	(X)	6.3	(X)	11.3
	Other industrial food products machinery:					
35513 53	Packing and packaging machinery	.....	(X)	47.0	(X)	30.9
35513 59	Other industrial food products machinery	.....	(X)	44.3	(X)	37.7
	Bottling machinery for foods (except dairy products), liquor, beer, wine, and other beverages):					
35513 65	Filling, capping, and labeling machines	No. of units...	2,854	49.6	1,798	27.4
35513 66	Uncasers and casers	...do.....	(NA)	5.4	145	3.4
35513 67	Bottle washers and sterilizers	...do.....	287	13.8	380	11.4
35513 61	Carbonators (beverage bottling)	...do.....	(X)	19.1	(X)	15.1
35513 69	Other food bottling machinery, except dairy	.....				

See footnotes at end of table.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

35595 89	Other special industrial machinery and equipment and parts (including incandescent lampmaking, paintmaking, stoneworking, hatmaking, leatherworking, jewelers', pharmaceutical, etc.)	.....	X)	314.8	(X)	[7]171.3
35595 91	Electric nonmetallic processing industrial furnaces and ovens, including kilns and lehrs	.....	(X)	16.2	(X)	9.0
35595 92	Fuel-fired kilns (cement, wood, and chemical processing)	No. of units..	427	30.0	380	21.9
35595 93	Other nonmetallic processing industrial furnaces and ovens and parts, including kilns and lehrs	.....	(X)	20.6	(X)	10.5
35595 00	Other special industry machinery and equipment, n.s.k.	.....	(X)	55.2	(X)	24.8

See footnotes at end of table.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

Product code	Product	Unit of measure	Total shipments including interplant transfers			
			1967		1963	
			Quantity	Value (million dollars)	Quantity	Value (million dollars)
3559- --	SPECIAL INDUSTRY MACHINERY, N.E.C.--Continued					
35590 00	Special industry machinery, n.s.k. (For companies with 10 or more employees. See Note.)	.....	(X)	81.1	(X)	32.2
35590 02	Special industry machinery, n.s.k. (For companies with less than 10 employees. See Note.)	.....	(X)	17.9		

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments, which are further discussed in the text, are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, "Explanation of Terms."

Standard notes: - Represents zero. [e]From 10 to 30 percent of this figure was estimated. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]1967 data for product code 35511 13, uncasers and casers and product code 35511 51, homogenizers are included with product code 35511 98, other dairy and milk products processing machinery.

[2]For combination slicing and wrapping machines the number and value of slicing units are included with slicing machines and the number and value of wrapping units with wrapping machines.

[3]The 1963 data for "combing machines" are included with product code 35521 55, other fiber-to-fabric machinery.

[4]Data for product code 35521 65, power looms, are included with product code 35521 84, other fabric machinery.

[5]1963 data for product 35592 21, foundry pouring equipment, including ladles, crucibles, and pouring machines are included with product code 35592 98, other foundry machinery, etc."

[6]Some equipment in this product class may be leased rather than sold outright. For leased equipment, estimates of the value of products produced were reported. These estimates approximate the value of the products had they been sold outright and are based on market values of the products, tax or insurance valuations, etc.

[7]1963 data for product code 35595 21, ammunition and explosives loading machinery and equipment are included with product code 35595 89, other special industry machinery and equipment, etc.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments	
	1967	1963
DAIRY, MILK PRODUCTS PLANT MACHINERY, EQUIPMENT (35511)

California	112.1	20.3

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the value are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: n.e.c. Not elsewhere classified.

[1] This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

TABLE 6C. Product Classes–Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

(In millions of dollars)

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes.

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, "Explanation of Terms."

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

(See Appendix, Explanation of Terms)

Code	Material	Unit of measure	1967		1963

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963–Continued

(See Appendix, Explanation of Terms)

Code	Material	Unit of measure	1967		1963	
			Quantity	Delivered cost (million dollars)	Quantity	Delivered cost (million dollars)
	INDUSTRY 3559.--SPECIAL INDUSTRY MACHINERY, N.E.C.--Continued					
	Bearings:					
356218	Ball	.....	(X)	3.9	(X)	3.0
356201	Roller	.....	(X)	3.6	(X)	2.4
970099	All other materials and components, parts, containers, and supplies consumed	.....	(X)	331.3	(X)	178.8
976000	Materials, etc., n.s.k	.....	(X)	134.4	(X)	59.1

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard Note: - Represents zero. (X) Not applicable. (NA) Not available. (Z) Less than 0.1 when rounded. (D) Included with material code 970099, "All other materials and components, etc." to avoid disclosing figures for individual companies.

[1]No data are available for castings or electric motors and generators for quantities produced and consumed in the same establishment except the following for 1963: industry 3551--iron castings (4.9 thousand short tons) and aluminum castings (0.3 million pounds); industry 3552--iron castings (6.1 thousand short tons) and aluminum castings (0.4 million pounds); industry 3553--iron castings (11.1 thousand short tons) and steel castings (1.2 thousand short tons); industry 3554--iron castings (31.4 thousand short tons); industry 3555---iron castings (3.3 thousand short tons), aluminum castings (0.1 million pounds), and fractional horsepower electric motors (0.5 thousand); industry 3559--iron castings (12.8 thousand short tons), steel castings (0.1 thousand short tons), aluminum castings (1.6 million pounds), copper castings (0.2 million pounds), and fractional horsepower electric motors (0.2 thousnad).

[2]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967 this includes estimates for companies that were not mailed report forms.

[3]Combined with material code 970099, "All other materials and components, parts, containers, and supplies consumed."

[4]These figures are understated by $5 million or less because of apparent undercoverage of carbon steel pipe and tube.

TABLE 7B. Fuels and Electric Energy Consumed: 1967

(See Appendix, Explanation of Terms)

Code	Item	Unit of measure	Textile machinery (SIC 3552)	Special industry machinery n.e.c. (SIC 3559)

	Quantity	Million cu. ft..	(NA)	1,629.4
	Cost	Million dollars.	(NA)	1.7
960013	Other fuels (gasoline, LPG, wood, etc.)	Million dollars.	(NA)	0.1
	Fuels, n.s.k	...do.....	(NA)	1.4
	Purchased electric energy:			
	Quantity	Million kw.-hrs.	293.8	571.1
	Cost	Million dollars.	3.9	8.4
	Quantity of electric energy generated less quantity sold	Million kw.-hrs.	-	(D)
	Total energy used for heat and power[1]	Million kw.-hrs equivalent	1,674.4	2,646.6

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available.
(D) Withheld to avoid disclosing figures for individual companies. (Z) Under $50 thousand.

[1]Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Man-hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)
3551	FOOD PRODUCTS MACHINERY

Standard notes: - Represents zero. (X Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 9.--Establishments and Production Workers for Selected Metalworking Operations: 1967

To be published in a separate subject chapter titled "Selected Metalworking Operations."

GENERAL INDUSTRIAL MACHINERY AND EQUIPMENT

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3561--Pumps, Air and Gas Compressors, and Pumping Equipment
3562--Ball and Roller Bearings
3564--Blowers and Exhaust and Ventilation Fans
3565--Industrial Patterns
3566--Mechanical Power Transmission Equipment, Except Ball and Roller Bearings
3567--Industrial Process Furnaces and Ovens
3569--General Industrial Machinery and Equipment, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3561--PUMPS, AIR AND GAS COMPRESSORS, AND PUMPING EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing pumps, compressors, and pumping equipment for general industrial use. Establishments primarily engaged in manufacturing measuring and dispensing pumps for gasoline service station use are classified in industry 3586; and icemaking, refrigerating, and air conditioning units in industry 3585. For a detailed list of products of industry 3561, refer to table 6A, product codes 3561100 to 3561611.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Pumps and Compressors Industry in 1967 totaled $2,207 million. This included shipments of pumps and compressors (primary products), valued at $1,705 million, shipments of other products (secondary products) valued at $265 million, and miscellaneous receipts (mainly resales) of $237 million.

This industry's shipments of pumps and compressors (primary products) in 1967 represented 87 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 85 percent. Secondary products shipped by this industry in 1967 included valves and pipe fittings ($42 million), and internal combustion engines, n.e.c. ($37 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 34 percent of the total industry shipments are represented by plants specializing in product class 35614, Air and gas compressors, except refrigeration compressors 27 percent in 35611, Industrial pumps, except hydraulic fluid power pumps.

Industry 3561 shipments of pumps and compressors (primary products) in 1967 represented 88 percent (coverage ratio) of these products valued at $1,947 million shipped by all industries. In 1963, the coverage ratio was 86 percent. Other industries shipping pumps and compressors (primary products) consisted mainly of industry 3494, Valves and Pipe Fittings, $33 million; and industry 3533, Oilfield Machinery, $23 million; industry 3621, Motors and Generators, $22 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3561, these establishments accounted for less than 1 percent of payroll and 1 percent of value added by manufacture.

3562--BALL AND ROLLER BEARINGS

This industry comprises establishments primarily engaged in manufacturing ball and roller bearings and parts. Establishments primarily engaged in manufacturing bearings, except ball and roller, are classified in industry 3566. For a detailed list of products of industry 3562, refer to table 6A, product codes 3562103 to 3562951.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Ball And Roller Bearings Industry in 1967 totaled $1,328 million. This included shipments of ball and roller bearings (primary products), valued at $1,260 million, shipments of other products (secondary products) valued at $35 million, and miscellaneous receipts (mainly resales) of $33 million.

This industry's shipments of ball and roller bearings (primary products) in 1967 represented 97 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio was the same in 1963. Secondary products shipped by this industry in 1967 included power transmission equipment ($12 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 40 percent of the total industry shipments are represented by plants specializing in product class 35621, Ball bearings, complete; and 29 percent in 35622, Taper (except thrust) roller bearings, complete.

Industry 3562 shipments of ball and roller bearings (primary products) in 1967 represented 97 percent (coverage ratio) of these products valued at $1,292 million shipped by all industries. In 1963, the coverage ratio was 98 percent. Other industries shipping ball and roller bearings (primary products) consisted mainly of industry 3566, Power Transmission Equipment, $22 million

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For

industry 3562, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3564--BLOWERS AND EXHAUST AND VENTILATION FANS

This industry comprises establishments primarily engaged in manufacturing industrial and commercial blowers, industrial and commercial exhaust and ventilating fans, and attic fans. Establishments primarily engaged in manufacturing air-conditioning units are classified in industry 3585, and free air-circulating fans for use on desks, pedestals, or wall brackets, as well as household window-type fans and roll-abouts, kitchen and household ventilating and exhaust fans in industry 3634. For a detailed list of products of industry 3564, refer to table 6A, product codes 3564100 to 3564259.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Blowers And Fans Industry in 1967 totaled $525 million. This included shipments of blowers and fans (primary products), valued at $411 million, shipments of other products (secondary products) valued at $71 million, and miscellaneous receipts (mainly resales) of $43 million.

This industry's shipments of blowers and fans (primary products) in 1967 represented 85 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 83 percent. Secondary products shipped by this industry in 1967 included heating equipment, except electric ($10 million), and power transmission equipment ($7 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 62 percent of the total industry shipments are represented by plants specializing in product class 35641, Industrial fans and blowers; and 33 percent in 35642, Dust collection, air purification equipment and air washers.

Industry 3564 shipments of blowers and fans (primary products) in 1967 represented 82 percent (coverage ratio) of these products valued at $499 million shipped by all industries. In 1963, the coverage ratio was 79 percent. Other industries shipping blowers and fans (primary products) included industry 3559, Special Industry Machinery, N.E.C., $14 million; and industry 3433, Heating Equipment, Except Electric, $13 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3564, these establishments accounted for 1 percent of payroll and 1 percent of value added by manufacture.

3565--INDUSTRIAL PATTERNS

This industry comprises establishments primarily engaged in manufacturing industrial patterns. For a detailed list of products of industry 3565, refer to table 6A, product codes 3565011 to 3565098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Industrial Patterns Industry in 1967 totaled $202 million. This included shipments of industrial patterns (primary products), valued

at $186 million, shipments of other products (secondary products) valued at $8 million, and miscellaneous receipts of $8 million.

This industry's shipments of industrial patterns (primary products) in 1967 represented 96 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was also 96 percent. Secondary products shipped by this industry in 1967 consisted mainly of miscellaneous machinery, except electrical ($4 million), and aluminum castings ($2 million).

Industry 3565 shipments of industrial patterns (primary products) in 1967 represented 80 percent (coverage ratio) of these products valued at $234 million shipped by all industries. In 1963, the coverage ratio was also 80 percent. Other industries shipping industrial patterns (primary products) consisted mainly of industry 3361, Aluminum Foundries, $16 million; and industry 3321, Gray Iron Foundries, $13 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3565, these establishments accounted for 8 percent of payroll and 11 percent of value added by manufacture.

3566--MECHANICAL POWER TRANSMISSION EQUIPMENT, EXCEPT BALL AND ROLLER BEARINGS

This industry comprises establishments primarily engaged in manufacturing mechanical power transmission equipment and parts, for industrial machinery. Establishments primarily engaged in manufacturing automotive, tank, and tractor power transmission equipment are classified in industry 3714; aircraft power transmission equipment in industry 3729; and ball and roller bearings in industry 3562. For a detailed list of products of industry 3566, refer to table 6A, product codes 3566115 to 3566398.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Power Transmission Equipment Industry in 1967 totaled $1,263 million. This included shipments of power transmission equipment (primary products), valued at $1,060 million, shipments of other products (secondary products) valued at $117 million, and miscellaneous receipts (mainly resales) of $86 million.

This industry's shipments of power transmission equipment (primary products) in 1967 represented 90 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 84 percent.

Industry 3566 shipments of power transmission equipment (primary products) in 1967 represented 83 percent (coverage ratio) of these products valued at $1,283 million shipped by all industries. In 1963, the coverage ratio was 79 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3566, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3567--INDUSTRIAL PROCESS FURNACES AND OVENS

This industry comprises establishments primarily engaged in manufacturing industrial process furnaces, ovens, induction and dielectric heating equipment and related devices. For a detailed list of products of industry 3567, refer to table 6A, product codes 3567111 to 3567391.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Industrial Furnaces and Ovens Industry in 1967 totaled $496 million. This included shipments of industrial furnaces and ovens (primary products), valued at $366 million, shipments of other products (secondary products) valued at $54 million, and miscellaneous receipts of $76 million.

This industry's shipments of industrial furnaces and ovens (primary products) in 1967 represented 87 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 83 percent. Secondary products shipped by this industry in 1967 included special industry machinery, n.e.c. ($13 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 44 percent of the total industry shipments are represented by plants specializing in product class 35672, Fuel-fired industrial furnaces and ovens, metal processing; and 31 percent in 35673, High frequency induction and dielectric heating equipment and parts, attachments and components.

Industry 3567 shipments of industrial furnaces and ovens (primary products) in 1967 represented 88 percent (coverage ratio) of these products valued at $416 million shipped by all industries. In 1963, the coverage ratio was 85 percent. Other industries shipping industrial furnaces and ovens (primary products) included industry 3559, Special Industry Machinery, N.E.C., $10 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3567, these establishments accounted for 1 percent of payroll and 1 percent of value added by manufacture.

3569--GENERAL INDUSTRIAL MACHINERY AND EQUIPMENT, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing machinery, equipment, and components for general industrial use, and for which no special classification is provided. Machine shops primarily engaged in producing machine and equipment parts, usually on a job or order basis, are classified in industry 3599. For a detailed list of products of industry 3569, refer to table 6A, product codes 3569012 to 3569098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the General Industrial Machinery, N.E.C., Industry in 1967 totaled $901 million. This included shipments of general industrial machinery, n.e.c. (primary products), valued at $712 million, shipments of other products (secondary products) valued at $121 million, and miscellaneous receipts (mainly resales) of $67 million.

This industry's shipments of general industrial machinery, n.e.c. (primary products) in 1967 represented 85 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 83 percent. Secondary products shipped by this industry in 1967 consisted mainly of special industry machinery, n.e.c. ($24 million), and fabricated metal products, n.e.c. ($12 million).

Industry 3569 shipments of general industrial machinery, n.e.c. (primary products) in 1967 represented 79 percent (coverage ratio) of these products valued at $900 million shipped by all industries. In 1963, the coverage ratio was70 percent. Other industries shipping general industrial machinery, n.e.c. (primary products) included industry 3559, Special Industry Machinery, N.E.C., $38 million; industry 3443, Fabricated Platework (Boiler Shop Products), $12 million; and industry 3494, Valves and Pipe Fittings, $12 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3569, these establishments accounted for 1 percent of payroll and 1 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio
	Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(percent)	(percent)

Note: In 1967, 1963, and 1958, the number of companies in industry 3561 was 590, 589, and 530, respectively; in industry 3562: 85, 93, and 86; industry 3564: 271, 225, and 199; industry 3565: 1,156, 1,206, and 1,170; industry 3566: 476, 498, and 449; industry 3567: 246, 229, and 197; industry 3569: 725, 754, and 568. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: (NA) Not available. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. * These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1] Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2] Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967—Continued

Product code	Class of products, industry and miscellaneous receipts	All industries
	Listings of other industries with over $2 million shipments of primary products:	
3561	3069 Fabricated rubber products, n.e.c.	2.0
3561	3264 Porcelain electrical supplies	(over 2)
3561	3433 Heating equipment, except electric	(2-5)
3561	3443 Fabricated platework (boiler shop products)	3.3
3561	3494 Valves and pipe fittings	33.0
3561	3511 Steam engines and turbines	13.3
3561	3519 Internal combustion engines, n.e.c.	13.1
3561	3522 Farm machinery	5.6
3561	3531 Construction machinery	7.7
3561	3532 Mining machinery	4.8
3561	3533 Oilfield machinery	22.5
3561	3541 Machine tools, metal-cutting types	3.5
3561	3553 Woodworking machinery	3.3
3561	3586 Measuring and dispensing pumps	15.8
3561	3589 Service industry machines, n.e.c.	7.3
3561	3599 Miscellaneous machinery, except electrical	(10-20)
3561	3621 Motors and generators	21.7
3561	3722 Aircraft engines and engine parts	3.1
3561	3729 Aircraft equipment, n.e.c.	7.7
3561	3731 Ship building and repairing	(10-20)
3561	3742 Railroad and street cars	(2-5)
3562	3079 Miscellaneous plastics products	(over 2)
3562	3545 Machine tool accessories	(over 2)
3564	2541 Wood partitions and fixtures	(over 2)
3564	3296 Mineral wool	(over 2)
3564	3433 Heating equipment, except electric	13.4
3564	3443 Fabricated platework (boiler shop products)	4.9
3564	3444 Sheet metalwork	6.6
3564	3494 Valves and pipe fittings	(over 2)
3564	3499 Fabricated metal products, n.e.c.	(2-5)
3564	3535 Conveyors and conveying equipment	3.0
3564	3559 Special industry machinery, n.e.c.	14.4
3564	3585 Refrigeration machinery	5.6
3564	3621 Motors and generators	7.2
3564	3642 Lighting fixtures	3.1
3565	3321 Gray iron castings	12.7
3565	3322 Malleable iron castings	3.8
3565	3323 Steel castings	8.3
3565	3361 Aluminum castings	16.5
3566	3362 Brass, bronze, and copper castings	4.0
	Listings of other industries with over $2 million shipments of primary products:--Continued	
3566	3432 Plumbing fittings and brass goods	5.0
3566	3511 Steam engines and turbines	9.4
3566	3533 Oilfield machinery	(5-10)
3566	3535 Conveyors and conveying equipment	5.1
3566	3541 Machine tools, metal-cutting types	3.1
3566	3542 Machine tools, metal-forming types	(over 2
3566	3545 Machine tool accessories	2.5
3566	3548 Metalworking machinery, n.e.c.	11.0
3566	3559 Special industry machinery, n.e.c.	8.3
3566	3599 Miscellaneous machinery, (except electrical)	2.5
3566	3621 Motors and generators	45.2
3566	3714 Motor vehicle parts and accessories	23.3
3566	3722 Aircraft engines and engine parts	(20-50)
3566	3729 Aircraft equipment, n.e.c.	(5-10)
3567	3441 Fabricated structural steel	(over 2)
3567	3536 Hoists, cranes, and monorails	(over 2)
3567	3559 Special industry machinery, n.e.c.	10.3
3567	3623 Welding apparatus	5.8
3567	3629 Electrical industrial apparatus, n.e.c.	(over 2)
3567	3631 Household cooking equipment	(over 2)
3567	3714 Motor vehicle parts and accessories	(over 2)
3567	3742 Railroad and street cars	3.1
3567	3821 Mechanical measuring devices	(over 2)
3569	2651 Folding paperboard boxes	(over 2
3569	3296 Mineral wool	(over 2)
3569	3312 Blast furnaces and steel mills	(over 2)
3569	3429 Hardware, n.e.c.	8.0
3569	3432 Plumbing fittings and brass goods	2.5
3569	3443 Fabricated platework (boiler shop products)	12.0
3569	3444 Sheet metalwork	3.1
3569	3494 Valves and pipe fittings	11.6
3569	3498 Fabricated pipe and fittings	(2-5)
3569	3499 Fabricated metal products, n.e.c.	6.6
3569	3522 Farm machinery	6.3
3569	3535 Conveyors and conveying equipment	3.0
3569	3536 Hoists, cranes, and monorails	2.4
3569	3551 Food products machinery	9.7
3569	3559 Special industry machinery, n.e.c.	38.4
3569	3582 Commercial laundry equipment	5.7
3569	3586 Measuring and dispensing pumps	3.9
3569	3589 Service industry machinery, n.e.c.	5.5
3569	3599 Miscellaneous machinery, (except electrical)	2.9
3569	3729 Aircraft equipment, n.e.c.	9.1

Note: Data shown parenthetically are ranges expressed in millions of dollars. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under 50 thousand (or under 50 employees).

[1]Includes, where appropriate, values for those 4-digit product groups for which either the symbol "D" or a value range, e.g. (2-5), (under 2), etc. appear above.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Total shipments including interplant transfers			
		1967		1963	
		Quantity	Value (million dollars)	Quantity	Value (million dollars)
3561- --	PUMPS AND COMPRESSORS, TOTAL	(X)	1,947.5	(X)	1,249.2
35611 --	Industrial pumps, except hydraulic fluid power pumps:				
	As reported in the census of manufactures[1]	(X)	436.9	(X)	321.9
	As reported on Census Form MA-35P[1]	(X)	448.7	(X)	320.8
	Value of drivers (reported separately)[2]	(X)	89.9	(X)	71.8
	Reciprocating pumps:				
35611 01	Direct-acting steam-driven	1.5	2.8	2.2	3.2
35611 03	Power-operated, other than steam	141.6	38.5	58.8	20.1
35611 07	Turbine pumps, vertical (including deep-well)	27.9	45.3	21.2	31.2
	Centrifugal pumps, total	989.5	216.9	1,008.5	155.2
	Single stage, single suction, close coupled:				
35611 11	1/2" discharge outlet and under	39.4	1.5	35.4	1.4
35611 12	3/4" and 1" discharge outlet	143.4	7.3	136.2	6.2
35611 14	1-1/4" and 1-1/2" discharge outlet	138.5	11.1	111.4	8.2
35611 15	2" and 2-1/2" discharge outlet	50.7	6.4	41.8	5.9
35611 16	3" and 4" discharge outlet	28.3	8.4	22.9	6.5
35611 19	Over 4" discharge outlet	8.5	5.6	4.2	2.8
	Single stage, single suction, frame mounted:				
35611 21	1/2" discharge outlet and under	18.5	0.5	13.6	.5
35611 22	3/4" and 1" discharge outlet	44.3	6.6	142.1	7.2
35611 23	1-1/4" and 1-1/2" discharge outlet	43.8	9.8	213.6	11.6
35611 24	2" and 2-1/2" discharge outlet	34.0	11.8	43.0	7.8
35611 25	3" discharge outlet	21.5	9.9	24.2	6.1
35611 26	4" to 6" discharge outlet	22.1	16.6	16.3	9.5
35611 29	Over 6" discharge outlet	3.8	10.1	2.1	4.8
	Single stage, double suction:				
35611 42	Under 4" discharge outlet	10.2	3.6	9.9	2.7
35611 44	4" and 5" discharge outlet	6.7	6.1	4.1	3.7
35611 46	6" and 7" discharge outlet	3.2	4.2	2.0	2.1
35611 48	8" and 12" discharge outlet	2.5	7.0	2.1	4.8
35611 49	Over 12" discharge outlet	.7	6.9	.4	3.2
	Multistage (single or double suction):				
35611 52	1-1/2" discharge outlet and under	14.7	2.6	9.5	1.5
35611 54	2" and 3" discharge outlet	5.2	10.4	4.0	5.6
35611 56	4" and 5" discharge outlet	2.3	8.0	1.5	4.6
35611 58	6" and 7" discharge outlet	1.1	5.5	1.0	4.8
35611 59	8" and over discharge outlet	1.2	17.5	.5	11.4
	Propeller and mixed flow:				
35611 62	20" and under	2.0	4.2	1.6	3.9
35611 64	Over 20"	.5	6.0	.5	7.0
	All other centrifugal pumps (including can, etc.):				
35611 65	1-1/2" discharge outlet and under	314.4	6.1	136.9	3.7
35611 66	2" to 6" discharge outlet	25.9	9.6	25.4	7.3
35611 69	Over 6" discharge outlet	2.0	13.6	2.4	10.5
	Rotary pumps, total	736.8	47.0	583.3	31.1
	100 p.s.i. and under, designed pressure:				
35611 72	10 g.p.m. and under, designed capacity	231.9	6.6	251.3	5.9
35611 73	11-299 g.p.m. designed capacity	174.3	15.4	93.9	8.4
35611 74	300 g.p.m. and over, designed capacity	2.6	1.6	4.2	1.3
35611 75	101-250 p.s.i. designed pressure	215.6	13.6	153.6	10.0
35611 76	251-500 p.s.i. designed pressure	105.7	7.4	72.5	4.3
35611 79	Over 500 p.s.i. designed pressure	6.8	2.4	7.8	1.2
35611 98	Other industrial pumps	48.4	8.3	42.4	8.1
35612 --	Hydraulic fluid power pumps and motors and vacuum pumps:				
	As reported in the census of manufactures[1]	(X)	218.6	(X)	134.9
	As reported on Census Form MA-35P[1]	(X)	207.5	(X)	134.0
	Value of drivers (reported separately)[2]	(X)	9.4	(X)	7.5
	Hydraulic fluid power pumps and motors, total	2,015.4	172.2	1,382.4	107.3
35612 81	Gear type	1,385.1	60.0	974.7	35.7
35612 83	Vane type[3]	427.3	38.5	306.2	21.2

See footnotes at end of table.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Total shipments including interplant transfers			
		1967		1963	
		Quantity	Value (million dollars)	Quantity	Value (million dollars)
3561- --	PUMPS AND COMPRESSORS--Continued				
35612	Hydraulic fluid power pumps and motors and vacuum pumps--Continued				
	Hydraulic fluid power pumps and motors--Continued				
35612 85	Axial	187.7	58.6	88.6	38.2
35612 87	Rotary or radial	15.3	15.1	12.9	12.3
	Vacuum pumps (except laboratory):				
35612 93	Moderate (low) vacuum	134.1	18.9	108.7	19.2
35612 94	High vacuum	27.3	7.0		
35613 --	Domestic water systems, hand and windmill pumps, pump jacks, and cylinders for domestic water systems	(X)	140.3	(X)	83.7
35614 --	Air and gas compressors, except refrigeration compressors:				
	As reported in the census of manufactures[1]	(X)	501.0	(X)	292.3
	As reported on Census Form MA-35P[1]	(X)	469.1	(X)	285.9
	Value of drivers (reported separately)[2]	(X)	48.1	(X)	28.9
	Air compressors, total	282.8	217.4	244.1	140.5
	Stationary, total	203.8	155.8	175.7	88.5
35614 11	1-1/2 hp. and under	121.3	10.5	114.0	9.7
35614 12	Over 1-1/2-5 hp	48.0	15.3	39.0	11.7
35614 13	6-15 hp	19.9	16.7	13.2	9.9
35614 15	16-100 hp	12.1	54.4	7.9	27.1
35614 16	101-250 hp	1.8	25.6	1.5	16.3
35614 17	251-1,000 hp	0.6	20.8	.3	8.2
35614 19	Over 1,000 hp	0.1	12.3	(Z)	5.5
	Portable, total	79.0	61.6	68.4	52.0
35614 31	Under 75 c.f.m.	69.1	8.7	60.4	9.4
35614 32	75-150 c.f.m.	6.8	20.4	6.3	18.4
35614 33	151-400 c.f.m.	1.9	11.9	.7	5.7
35614 35	Over 400 c.f.m.	1.2	20.6	1.0	18.7
	Gas compressors, total	4.2	191.6	3.3	107.6
35614 41	Centrifugal and axial	.5	50.3	.4	27.7
	Reciprocating and rotary, total	3.7	141.3	2.9	79.9
	Integral diesel, or gas-engine powered (reciprocating):				
35614 52	250 hp. and under	.3	[4]6.3	.3	[4]3.1
35614 55	251-1,000 hp	.2	[4]14.6	.2	[4]14.1
35614 57	Over 1,000 hp	.3	[4]79.2	.2	[4]43.0
	Other than integral engine powered (reciprocating and rotary):				
35614 62	250 hp. and under	2.4	10.1	1.9	6.4
35614 65	251-1,000 hp	.5	15.3	.3	8.0
35614 67	Over 1,000 hp	.1	15.9	(Z)	5.3
35614 81 35614 97	Other compressors[5]	207.8	12.0	155.3	8.9
35615 --	Pumps and compressors, n.e.c., except refrigeration compressors, total	(X)	197.5	(X)	148.0
	Products included in the census of manufactures and on Census Annual Form MA-35P:				
35615 19	As reported in the census of manufactures[1]	(X)	120.2	(X)	86.9
	As reported on Census Form MA-35P[1]	(X)	107.4	(X)	77.0
	Value of drivers (reported separately)[2]	(X)	19.9	(X)	5.3
	Oil-well and oilfield pumps (except boilerfeed), total	43.3	44.5	42.8	43.2
35615 11	Subsurface pumps for oil-well pumping	42.0	32.7	41.0	31.6
35615 13	Slush pumps	.2	7.2	.2	6.0
35615 15	Other oil-well and oilfield pumps	1.1	4.5	1.7	5.6
35615 96	Other pumps (except automotive) (such as oil burner and appliance pumps, fire engine pumps, laboratory pumps, sump pumps, etc.)	2,179.3	43.0	1,761.3	28.6
	Industrial spraying equipment:				
35615 31	Power paint-spraying outfits and liquid power sprayers, except agricultural types	(X)	70.0	(X)	54.2
35615 51	Hand sprayers, except agricultural and flame types	(X)	1.3	(X)	1.9
35615 00	Pumps and compressors, n.e.c., n.s.k.	(X)	6.0	(X)	5.0
35616 11	Parts and attachments for pumps, air and gas compressors, and pumping equipment	(X)	383.6	(X)	250.1
35610 00	Pumps and compressors, n.s.k. (For companies with ten or more employees. See Note.)	(X)	60.3	(X)	18.4
35610 02	Pumps and compressors, n.s.k. (For companies with less than ten employees. See Note.)	(X)	9.3		

See footnotes at end of table.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Total shipments including interplant transfers		
		1967		1963
		Quantity (million units)	Value (million dollars)	Value (million dollars)
3562- --	BALL AND ROLLER BEARINGS, TOTAL	(X)	1,292.2	[6]961.0
35621 --	Ball bearings, complete, total	(X)	472.7	[6]384.1
	Annular, ground or precision (including self-aligning):			
	Single row conrad:			
	Miniature (below 9mm o.d.):			
35621 03	Regular (BEC 1 and 3)	4.1	3.8	35.2
35621 05	Precision (BEC 5 and up)	6.7	15.8	
	Other:			
35621 06	Regular (BEC 1 and 3)	198.6	228.5	187.1
35621 08	Precision (BEC 5 and up)	7.2	56.6	
35621 14	Single row maximum capacity type	11.7	30.3	25.1
35621 16	Double row	17.1	38.2	23.0
35621 18	Angular contact	5.9	22.5	19.6
35621 19	All other ground or precision bearings	18.8	28.7	52.7
35621 25	Annular, unground (including self-aligning)	89.5	9.5	8.5
35621 33	Thrust, ground	9.0	14.6	13.9
35621 35	Thrust, unground	(NA)	3.5	2.1
35621 51	Other ball bearings	(NA)	14.9	13.8
35621 00	Not specified by kind	(X)	5.8	3.1
35622 31	Taper (except thrust) roller bearings, complete	(NA)	367.7	[6]294.2
35623 --	Other roller bearings, complete, total	(X)	225.0	[6]152.1
	Cylindrical, except thrust:			
35623 13	Regular (BEC 1 and 3)	[e]41.5	88.4	64.7
35623 15	Precision (BEC 5 and up)	1.5	10.8	
	Spherical (including hourglass and barrel but excluding thrust):			
35623 23	Single row	2.1	10.0	7.8
35623 27	Double row	[e]0.8	40.2	33.9
35623 41	Needle	[e]98.7	36.4	24.3
35623 53	Thrust (all types)	[e]47.9	25.0	12.7
35623 98	Other roller bearings	[e]12.2	14.1	6.2
35623 00	Not specified by kind	(X)	-	2.5
35624 --	Mounted bearings, total	(X)	96.0	[6]62.1
	Ball:

35620 02	Ball and roller bearings, n.s.k. (For companies with less than 10 employees. See Note.)	(X)	0.8	

See footnotes at end of table.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Value (million dollars) 1967	1963
3564- --	BLOWERS AND FANS, TOTAL	499.1	299.4
35641 00	Industrial fans and blowers, including blowers, industrial, exhaust, attic, and ventilating fans, and parts:		
	As reported in the census of manufactures[1]	294.9	191.2
	As reported on Census Annual Form MA-35H total[1]	274.9	192.7
	Fan and blower group, total	234.4	164.2
	Centrifugal and blowers	136.8	97.8
35641 17	Blower-filter units	1.0	3.3
35641 19	Classes I and II fans (over 1-1/2" to 6-3/4" maximum total pressure)	25.4	17.5
35641 21	Classes III and IV fans (greater than 6-3/4" maximum total pressure)	17.3	9.3
35641 23	Furnace and light-weight air-conditioning blowers	10.9	9.4
35641 24	Industrial fans, excluding blowers, turbo-blowers, and multistage blowers	24.1	[9]26.1
35641 27	Positive displacement blowers (excluding turbo-blowers)	21.7	10.4
35641 28	Turbo-blowers (single, stage, single and double inlet)		11.0
35641 29	Multistage blowers	17.9	([9])
35641 31	Small housed blowers (utility sets)	18.5	10.8
	Propeller fans and accessories	24.4	21.8
	Industrial	19.9	17.9
35641 33	Directly connected to driver	10.7	8.6
35641 35	Belt-driven	9.2	9.3
35641 37	Penthouses, shutters, guards, and other accessories	4.5	3.9
	Axial fans	32.9	19.4
35641 13	Directly connected to driver	24.6	15.9
35641 15	Belt-driven	8.3	3.6
35641 39	Parts for fans and blowers	40.4	25.1
	Power roof ventilators group, total	40.4	28.5
35641 41	Axial and propeller type	16.2	14.3
35641 43	Centrifugal type	[10]22.9	13.8
35641 45	Parts for power roof ventilators	1.4	.4
35642 --	Dust collection, air purification equipment and air washers, total	182.5	95.0
35642 31	Air washers:		
	As reported in the census of manufactures[1]	2.7	3.9
	As reported on Census Annual Form MA-35H[1]	2.5	3.6
	Dust collection and other air purification equipment:		
	For heating, ventilating, and air-conditioning systems:		
35642 41	Electrostatic precipitation equipment	19.2	[11]21.8
35642 43	Air filters for air-conditioners and furnaces, etc., of 2400 c.f.m. and under	28.7	
35642 49	Other dust collection and other air purification equipment (including air filters for air-conditioners and furnaces, etc., of over 2400 c.f.m.)	20.0	[12]66.5
	For industrial gas cleaning equipment:		
35642 51	Electrostatic precipitation equipment	26.9	([11])
35642 54	Fabric filters	32.7	
35642 55	Mechanical collectors	21.0	
35642 57	Scrubbers	3.7	([12])
35642 59	Other	13.4	
35642 00	Dust collection, air purification equipment and air washers, n.s.k.	14.2	2.8
35640 00	Blowers and fans, n.s.k. (For companies with 10 or more employees. See Note.)	17.4	13.2
35640 02	Blowers and fans, n.s.k. (For companies with fewer than 10 employees. See Note.)	4.3	
3565- --	INDUSTRIAL PATTERNS, TOTAL[13]	233.7	159.9
35650 11	Foundry patterns (wood, metal, etc.)	162.3	105.6
35650 98	All other industrial patterns (wood, metal, etc.) (except shoe patterns)	16.0	28.1
35650 00	Industrial patterns, n.s.k. (For companies with 10 or more employees. See Note.)	31.4	26.2
35650 02	Industrial patterns, n.s.k. (For companies with less than 10 employees. See Note.)	24.0	

See footnotes at end of table.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Total shipments including interplant transfers			
		1967		1963	
		Quantity (1,000 units)	Value (million dollars)	Quantity (1,000 units)	Value (million dollars)
3566- --	POWER TRANSMISSION EQUIPMENT, TOTAL	(X)	1,283.4	(X)	883.4
35661 --	Plain bearings	(X)	109.5	(X)	87.9
35661 15	Plain bearings and bushings, unmounted, machined, excluding carbon and graphite, all types, except automotive	(X)	86.8	(X)	77.4
35661 51	Mounted bearings, plain	(X)	11.1	(X)	10.2
35661 00	Plain bearings, n.s.k	(X)	11.7	(X)	0.4
35662 --	Speed changers, industrial high speed drives, and gears	(X)	506.4	(X)	333.3
	Gears, assembled and unassembled, speed reducers and increasers, mechanical power transmissions, except marine, automobile, truck, bus and aircraft (excludes aircraft, related engine and power take-off gears):				
35662 11	Variable speed changers	(NA)	47.0	79.5	17.1
35662 21	Industrial high speed drives, fixed ratio (pitch line velocity 4,000 feet per minute and over, and pinion speeds of 3,600 r.p.m. and over)			(NA)	12.3
	Speed reducers, fixed ratio, enclosed (except gear motors):				
	Worm gear speed reducers (except gear motors and shaft mounted speed reducers):				
35662 22	Above 8 inch center distance	(NA)	3.2	(NA)	17.9
35662 23	Above 3 inch center distance up to and including 8 inch	(NA)	13.2		
35662 24	3 inch center distance and below	319.4	25.6	161.8	12.0
35662 26	Shaft mounted speed reducers (excludes shaft mounted gear motors but includes shaft mounted worm gear reducers)	161.9	27.2	87.2	15.5
	Parallel, concentric shaft and bevel gear speed reducers:				
35662 27	Above 15 inch low speed centers	8.6	20.4	8.2	16.9
35662 28	15 inch low speed centers and below	(NA)	30.9	(NA)	17.2
	Gear motor reducer elements produced at the plant, including shaft mounted gear motors:				
35662 34	Under 1/8 horsepower	(NA)	[14]30.0	(NA)	[14]15.7
35662 36	1/8 horsepower to but not including 3/4 horsepower	340.2	[14]20.6	236.8	[14]15.0
35662 37	3/4 horsepower to and including 5 horsepower	255.8	[14]39.5	129.1	[14]18.8
35662 39	Over 5 horsepower	104.8	[14]31.5	77.4	[14]16.7
	Gears, pinions and racks, unmounted:				
35662 41	Fine pitch (20.00 diametral pitch and higher)	(X)	48.3	(X)	34.0
35662 49	Other than fine pitch (19.99 diametral pitch and less) excluding aircraft and related engine and power take-off gears but including railway type pinions, and racks	(X)	136.9	(X)	113.0
35662 00	Speed changers, gears and industrial high speed drives, n.s.k	(X)	32.1	(X)	11.0
35663 --	Other mechanical power-transmission equipment	(X)	604.5	(X)	449.5
	Clutches:				
35663 11	Friction type clutches	(NA)	25.4	(NA)	25.5
35663 13	Hydraulic type clutches including hydraulic couplings	(NA)	13.7	(NA)	9.7
35663 19	All other clutches	(NA)	21.0	([15])	([15])
	Flexible couplings:				
	1-inch nominal bore and over:				
35663 21	Gear type	(NA)	24.9	68.9	10.3
35663 22	Other than gear type	1,035.7	19.5	542.5	14.6
35663 24	Less than 1-inch nominal bore	(NA)	1.7	498.6	2.2
35663 25	Universal joints	5,500.6	54.8	3,204.4	29.2
35663 27	Flexible shafts	(X)	1.3	(X)	([15])
	Chains for sprocket drives:				
35663 33	ASA standard roller chain	(X)	86.4	(X)	98.9
35663 35	Other chains for sprocket drives	(X)	33.7		
	Sprockets:				
35663 43	For ASA standard roller chain	(X)	31.7	(X)	29.0
35663 45	Other sprockets	(X)	11.2		
35663 51	Pulleys	(NA)	13.6	(NA)	17.6
	Sheaves:				
35663 61	Single drive	(NA)	24.4	(NA)	5.7
35663 65	Multiple drive	(NA)		(NA)	15.3

See footnotes at end of table.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Total shipments including interplant transfers			
		1967		1963	
		Quantity (1,000 units)	Value (million dollars)	Quantity (1,000 units)	Value (million dollars)
3566- --	POWER TRANSMISSION--Continued				
35663 --	Other mechinical power-transmission equipment--Continued				
35663 87	Railroad car journal bearings	(NA)	([16])	(NA)	8.7
35663 92	Inboard marine gear transmissions (less than 600 horsepower) (includes reversing and speed changing gear drives)	(X)	23.4	(X)	11.2
35663 94	Inboard marine gear transmissions (600 hp. and over) (including reversing and speed changing gear drives but excluding outboard gear drives)	(X)	3.1		
35663 96	Outboard gear drives (inboard prime mover)				
35663 98	Other mechinical power-transmission equipment (except aircraft, automobile, truck, and bus)	(X)	[16]179.8	(X)	[15]163.4

35660 00	Mechanical power-transmission equipment, including bearings, n.s.k. (For companies with 10 employees or more. See Note.)	(X)	57.2	(X)	12.6
35660 02	Mechanical power-transmission equipment, including bearings, n.s.k. (For companies with less than 10 employees. See Note.)	(X)	5.7		
3567- --	INDUSTRIAL FURNACES AND OVENS, TOTAL[17]	(X)	[18]415.9	(X)	[18]237.7
35671 --	Electric industrial furnaces and ovens, metal processing, total	(X)	90.8	(X)	44.7
	Electric furnaces, excluding induction:				
35671 11	Metal melting	[e]457	19.8	204	8.4
35671 21	Metal processing and heat treating (such as annealing, hardening, carburizing, and porcelain enameling furnaces)	[e]2,264	46.2	1,994	26.6
35671 43	Electric, including infrared industrial ovens	(NA)	22.8	11,057	9.3
35671 00	Electric industrial furnaces and ovens, metal processing, n.s.k.	(X)	2.0	(X)	0.5
35672 --	Fuel-fired industrial furnaces and ovens, metal processing, total	(X)	155.7	(X)	76.6
35672 11	Metal melting, including blast furnaces and cupolas	1,397	16.9	599	8.4
35672 21	Metal processing and heat treating (such as annealing, hardening, carburizing, and porcelain enameling furnaces)	3,535	93.3	1,747	40.6
35672 41	Industrial ovens	3,459	28.3	2,084	10.6
35672 61	Hot rolling, forging, forming, and extruding furnaces and ovens	(NA)	14.8	(NA)	16.3
35672 00	Fuel-fired industrial furnaces and ovens, metal processing	(X)	2.3	(X)	0.8
35673 --	High frequency induction and dielectric heating equipment and parts, attachments and components, total	(X)	149.0	(X)	109.9
	Induction furnaces and heating equipment:				
35673 13	Radio frequency types including spark gap	(NA)	18.0	1,110	7.7
35673 15	Line and motor-generators set frequency types	(NA)	9.9	(NA)	11.0
	Other electrical equipment for industrial use, except soldering irons:				
	Industrial electric heating units and devices (except heating units for electric furnaces):				
35673 31	Dielectric heating equipment	(X)	6.2	(X)	15.0
35673 51	Tubular heating	(X)	6.4	(X)	5.2
35673 59	All other industrial electric heating units and devices (including strip, space, and ring heaters; water and all immersion heaters; glue and compound pots; etc.)	(X)	40.9	(X)	24.7
35673 91	Parts, attachments, and components for industrial furnaces and ovens, including electric heating units (sold separately)	(X)	61.8	(X)	45.3
35673 00	High frequency induction and dielectric heating equipment and parts, attachments and components, n.s.k.	(X)	5.8	(X)	1.0
35670 00	Industrial process furnaces and ovens, n.s.k. (For companies with 10 or more employees. See Note.)	(X)	16.3	(X)	6.5
33670 02	Industrial process furnaces and ovens, n.s.k. (For companies with less than than 10 employees. See Note.)	(X)	4.0		
3569- --	GENERAL INDUSTRIAL MACHINERY, N.E.C., TOTAL	(X)	899.8	(X)	664.3
	Packaging and wrapping machines (except for food, tobacco, liquor, wine, beer, and dairy products):				
35690 12	Filling-capping machines, including collapsible tube filling, closing, sealing machines	1,707	6.7	1,379	4.8
35690 13	Aerosol packaging machines	(NA)	7.0	6,538	22.0
35690 14	Bag and pouch forming, filling, and sealing machines	4,041	21.1		
35690 19	Other wrapping and packaging machinery, such as bundling, banding, unit packaging and tablet wadding	(NA)	64.2	(NA)	31.6
35690 25	Box, case, carton, and tray setting up, loading, lining, closing, and sealing machines	1,719	20.6	726	6.7
35690 26	Labeling and marking machines (except for food, tobacco, liquor, beer, wine, and dairy products)	(NA)	19.9	3,716	7.8

See footnotes at end of table.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Total shipments including interplant transfers			
		1967		1963	
		Quantity (number of units)	Value (million dollars)	Quantity (number of units)	Value (million dollars)
3569- --	GENERAL INDUSTRIAL MACHINERY--Continued				
	General industrial machinery and equipment, n.e.c.:				
35690 31	Gas generating equipment	(X)	21.8	(X)	19.6
35690 43	Filters, except internal combustion engine filters and air filters for furnaces and air conditioning equipment	(NA)	168.1	(NA)	120.3
35690 45	Strainers	(NA)	20.0		
35690 51	Centrifugals and separators, except cream, grain, and berry separators	(NA)	28.8	(NA)	20.7
35690 73	Hydraulic jacks	(NA)	24.2	76,891	20.0
35690 71	Pneumatic jacks				
35690 61	Automatic fire sprinkler equipment	(X)	19.3	(X)	351.2
35690 98	All other general industrial machinery and equipment	(NA)	343.7		
35690 00	General industrial machinery, n.s.k. (For companies with 10 or more employees. See Note.)	(X)	123.0	(X)	59.4
35690 02	General industrial machinery, n.s.k. (For companies with less than 10 employees. See Note.)	(X)	11.1		

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [6]From 10 to 30 percent of this figure was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]For these products, data were also collected in the Census Commodity Survey Program. In lieu of asking for detailed statistics on these products in the census of manufactures, respondents were asked to report only value of shipments for specified classes of products for which separate figures had previously been collected on the annual, quarterly, or monthly form. In most cases, the value figures reported in the census of manufactures for each class of product agreed closely with the corresponding figures reported in the commodity surveys. However, there were some differences between the census figures and the commodity survey figures. These variations were due primarily to the following reasons:

a. Use of different reporting periods (calendar year vs. fiscal year).
b. Use of different bases for reporting value (company sales vs. factory production).
c. Use of estimates in reporting data on the commodity surveys, whereas census of manufactures figures generally represent more exact shipments figures.

[2]The value of drivers was reported only at the product class level. For each product line, value figures exclude, except as noted for codes 3561452-57, the value of drivers (electric motors or prime movers) shipped with that product. The extent to which some respondents may have included the value of drivers with the value of specific pumps or compressors is unknown.

[3]Does not include hydraulic fluid power pumps for power steering units in passenger automobiles.

[4]Includes the value of drivers.

[5]Includes compressors for air brake systems used in transportation equipment and pneumatic (air) power compressors and motors (code 3561481).

[6]In 1963, the following figures represent the value of shipments of ball and roller bearings transferred from one plant of a company to another plant of the same company:

Product code	Value
3562-	108.3
35621	13.2
35622, 3, 4, 9	95.1

[7]In 1963 represents 8.0 million units.

[8]In 1963 represents 0.9 million units.

[9]1963 data for multistage blowers (3564129) are included with Industrial fans (3564124).

[10] Represents 159.7 thousand units.

[11]1963 data for electrostatic precipitation equipment for industrial gas cleaning (product code 35642 51) are included with product code 35642 41 electrostatic precipitation equipment for heating, ventilating and air-conditioning systems.

[12]1963 data for industrial gas cleaning equipment (other than electrostatic precipitation types) are included with product code 35642 49, other dust collection and other air purification equipment.

[13]Excludes industrial patterns produced for use in the same establishment.

[14]Represents the value of gear motor reducer elements only. Does not include the value of electric motors shipped as part of gear motor reducer elements.

[15]In 1963, these values were combined in 35663 98, other mechanical power-transmission equipment.

[16]In 1967, this value was combined in 35663 98, other mechanical power-transmission equipment.

[17]Represents shipments of industrial furnaces and ovens produced by manufacturing establishments only. Does not include industrial furnaces and ovens erected at the site by engineering and construction firms which purchase component parts for such furnaces and ovens.

[18]For 1963, establishments classified in industry 3567 reported a breakdown of shipments of industrial furnaces and ovens between "Field assembled" and "Factory assembled" installations. For 1963, the total of $202 million of industrial furnaces and ovens and parts reported by establishments classified in industry 3567, "Field assembled" amounted to $75 million and "Factory assembled" amounted to $127 million. No such data are available for 1967.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments	
	1967	1963

California	69.5	73.0

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1] This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

Note: Data shown parenthetically are ranges expressed in millions of dollars. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2]The product class structure for this industry was revised in 1967 as follows:

1967 code	1966 code
35621	35621
35622	35622
35623	
35624	35623
35629	35624

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

(See Appendix, Explanation of Terms)

Code	Material	Unit of measure	1967		1963	
			Quantity	Delivered cost (million dollars)	Quantity	Delivered cost (million dollars)
	INDUSTRY 3561.--PUMPS AND COMPRESSORS					
	Materials, parts, containers, and supplies, total	.....	(X)	873.7	(X)	570.4
	Mill shapes and forms (except castings):					
	Carbon steel:					
331011	Bars and bar shapes	1,000 short tons.	40.0	10.4	38.9	8.7

See footnotes at end of table.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963–Continued

(See Appendix, Explanation of Terms)

Code	Material	Unit of measure	1967		1963	
			Quantity	Delivered cost (million dollars)	Quantity	Delivered cost (million dollars)
	INDUSTRY 3569.--GENERAL INDUSTRIAL MACHINERY, N.E.C.--Con.					
	Materials, components, parts, containers, and supplies--Con.					
	Castings (rough and semifinished):[1]					
332011	Iron (gray and malleable)	...do	21.6	10.5	13.7	6.3
332300	Steel	...do	5.1	5.1	2.5	2.2
336100	Aluminum and aluminum-base alloy	Million lbs	(NA)	3.3	1.4	1.0
336200	Copper and copper-base alloy	...do	4.3	4.4	2.4	2.0
	Electric motors and generators:[1]					
362115	Fractional horsepower electric motors (under 1 hp.) (excluding timing motors)	Thousands	124.0	4.8	51.2	1.9
362120	Integral horsepower motors and generators (1 hp. and over)	...do	23.9	3.0	18.6	2.1
	Bearings:					
356218	Ball		(X)	1.0	(X)	0.9
356201	Roller		(X)	0.7	(X)	0.3
970099	All other materials and components, parts, containers, and supplies consumed		(X)	155.2	(X)	115.5
976000	Materials, parts, containers, and supplies, n.s.k.[2]		(X)	85.4	(X)	49.0

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated. (Z) Less than $50 thousand.

[1]For 1967, 77.1 thousand short tons of iron castings (code 332011) were produced and consumed in the same establishment for industry 3561. No other data are available for 1967 on the quantities of castings, forgings, engines, or electric motors and generators produced and consumed in the same establishment. For 1963, the following data are available: industry 3561-- iron castings (code 332011), 54.9 thousand short tons; fractional horsepower electric motors (code 362115), 420.4 thousand units; and integral horsepower motors and generators (code 362120), 13.4 thousand units; industry 3564-- iron castings (code 332011), 1.7 thousand short tons; and aluminum and aluminum-base alloy castings (code 336100), 0.5 thousand short tons; industry 3566-- iron castings (code 332011), 34.7 thousand short tons; and steel castings (code 332300), 0.1 thousand short tons; industry 3569-- iron castings (code 332011), 1.8 thousand short tons; and integral horsepower motors and generators (code 362120), 0.3 thousand units.

[2]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967 this includes estimates for companies that were not mailed report forms.

[3]Included with material code 970099 "All other materials and components, etc." to avoid disclosing figures for individual companies.

[4]These figures are understated by $5 million or less because of apparent undercoverage of carbon steel pipe and tube.

[5]Included with material code 970099 "All other materials and components, etc."

TABLE 7B. Fuels and Electric Energy Consumed: 1967

(See Appendix, Explanation of Terms)

Code	Item	Unit of measure	Pumps and compressors (SIC 3561)	Ball and roller bearings (SIC 3562)	Power transmission equipment (SIC 3566)	General industrial machinery, n.e.c. (SIC 3569)
	Cost of purchased fuels and electric energy, total.....	Million dollars..	15.3	16.0	11.6	6.4

291111 960011 960013 960017	Other fuels (gasoline, LPG, wood, etc.).....	...do.....	0.3	0.2	(D)	(NA)
	Fuels, n.s.k.....	...do.....	2.3	0.7	0.9	(NA)
	Purchased electric energy:					
	Quantity.....	Million kw.-hrs.	643.2	919.9	523.0	299.5
	Cost.....	Million dollars..	8.4	9.5	7.1	4.0
	Quantity of electric energy generated less quantity sold.....	Million kw.-hrs.	18.5	(S)	(S)	(S)
	Total energy used for heat and power[1].....	Million kw.-hrs. equivalent	4,038.9	4,302.0	2,724.1	1,573.9

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability. (Z) Less than $50 thousand or less than 50 employees.

[1]Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. X Not applicable. NA Not available. (D Withheld to avoid disclosing figures for individual companies.

TABLE 9. Establishments and Production Workers for Selected Metalworking Operations: 1967

(To be published in a separate subject chapter titled "Selected Metalworking Operations.")

OFFICE, COMPUTING, AND ACCOUNTING MACHINES

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3572--Typewriters
3573--Electronic Computing Equipment
3574--Calculating and Accounting Machines, Except Electronic Computing Equipment
3576--Scales and Balances, Except Laboratory
3579--Office Machines, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3572--TYPEWRITERS

This industry comprises establishments primarily engaged in manufacturing typewriters and parts. For a detailed list of products of industry 3572, refer to table 6A, product codes 3572001 to 3572051.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Typewriters Industry in 1967 totaled $596 million. This included shipments of typewriters (primary products), valued at $503 million, shipments of other products (secondary products) valued at $81 million, and miscellaneous receipts (mainly resales) of $11 million.

This industry's shipments of typewriters (primary products) in 1967 represented 86 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 85 percent.

Industry 3572 shipments of typewriters (primary products) in 1967 represented 99 percent (coverage ratio) of these products valued at $508 million shipped by all industries. In 1963, the coverage ratio was also 99 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3572, these establishments accounted for approximately less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3573--ELECTRONIC COMPUTING EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing electronic computers and/or major logical components intended for use in electronic computer systems. Included are general-purpose electronic analog computers as well as electronic digital computers. The electronic computers may be used for data processing or may be incorporated as components into control equipment for industrial use, and as components of equipment used in weapons and weapons systems, space and oceanographic exploration, transportation, and other systems. Electronic computer systems contain high speed arithmetic and program control units, on-line information storage devices and input/output equipment. Examples of input/output equipment are converters (card and/or tape), readers and printers. Examples of storage devices are magnetic drums and disks, magnetic cores and magnetic film memories. In addition to providing technical manuals necessary for the operation and maintenance of the equipment, establishments in this industry usually furnish general-purpose computer programs and basic operating systems programs needed for effective use of the computer system. Establishments primarily producing rebuilt electronic computers are also included in this industry. Establishments primarily engaged in manufacturing desk calculators, cash registers, accounting machines and similar equipment, typically electrical or mechanical, are classified in industry 3574; electrical and electronic test equipment in industry 3611; industrial controls, including electronic, in industry 3622; and industrial process instruments in industry 3821. For a detailed list of products of industry 3573, refer to table 6A, product codes 3573111 to 3573331.

Both the code number and content for this industry for 1967 were changed from the classification system used in 1963. Electronic computing equipment and calculating and accounting machines were both included in industry 3571 in 1963. In 1967, industries 3573 and 3574 replaced industry 3571. The present composition of industry 3573 is electronic computing equipment. Industry 3574 is composed of calculating and accounting machines.

Value of shipments and other receipts of the Electronic Computing Equipment Industry in 1967 totaled $3,771 million. This included shipments of electronic computing equipment (primary products), valued at $3,516 million, shipments of other products (secondary products) valued at $159 million, and miscellaneous receipts (mainly research and developmental work) of $96 million.

The total value of electronic computing equipment shipped by all producers in 1967 was $4,049 million of which $3,516 million were shipped by plants classified in industry 3573, Electronic Computing Equipment, while the remainder was shipped by plants classified in other industries.

The total cost of materials and total value of shipments of the Electronic Computing Equipment Industry include extensive duplication resulting from the intra-industry shipments of certain products by some establishments for use as materials by others. For this reason, the "primary product specialization ratio," a measure of the extent to which plants classified in an industry "specialize" in making the products regarded as primary to the industry, has not been computed precisely. The ratio, however, is between 90 and 100. Since this duplication is also included in the value of shipments shown in table 6A the coverage ratio for this industry has not been computed.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 91 percent of the total industry shipments are represented by plants specializing in product class 35731, electronic computing equipment, except parts and attachments.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments,

key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3573, there were no such establishments.

3574--CALCULATING AND ACCOUNTING MACHINES, EXCEPT ELECTRONIC COMPUTING EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing desk calculators, adding and accounting machines, cash registers, and similar equipment, except electronic computers. Establishments primarily engaged in manufacturing electronic computing equipment are classified in industry 3573; typewriters in industry 3572; and office duplicating machines and devices, autographic registers, and other office machines in industry 3579. For a detailed list of products of industry 3574, refer to table 6A, product codes 3574111 to 3574331.

Both the code number and content for this industry for 1967 were changed from the classification system used in 1963. The composition of the industry as now constituted, compared with electronic computing equipment and calculating and accounting machines were both included in industry 3571 in 1963. In 1967, industries 3573 and 3574 replaced industry 3571. The present composition of industry 3574 is calculating and accounting machines. Industry 3573 is composed of electronic computing equipment.

Value of shipments and other receipts of the Calculating and Accounting Machines Industry in 1967 totaled $708 million. This included shipments of calculating and accounting machines (primary products), valued at $532 million, shipments of other products (secondary products) valued at $95 million, and miscellaneous receipts (mainly resales) of $80 million.

This industry's shipments of calculating and accounting machines (primary products) in 1967 represented 85 percent (specialization ratio) of its total product shipments (primary and secondary). Since both calculating and accounting machines and electronic computing equipment constituted industry 3571 in 1963, the specialization ratio for 1963 is not available. Secondary products shipped by this industry in 1967 consisted mainly of electronic computing equipment ($87 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 90 percent of the total industry shipments are represented by plants specializing in product class 35741, calculating and accounting machines, including cash registers, except parts and attachments.

Industry 3574 shipments of calculating and accounting machines (primary products) in 1967 represented 84 percent (coverage ratio) of these products valued at $631 million shipped by all industries. Because both calculating and accounting machines and electronic computing equipment comprised industry 3571 in 1963, the coverage ratio for 1963 is not available. Other industries shipping computing and accounting machines (primary products) consisted mainly of industry 3573, Electronic Computing Equipment, $48 million and industry 3572, Typewriters, $24 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3574, these establishments accounted for approximately 1 percent of payroll and 1 percent of value added by manufacture.

3576--SCALES AND BALANCES, EXCEPT LABORATORY

This industry comprises establishments primarily engaged in manufacturing weighing and force measuring machines and devices of all types, except those regarded as scientific apparatus for laboratory and experimental work which are classified in industry 3811. For a detailed list of products of industry 3576, refer to table 6A, product codes 3576013 to 3576084.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Scales and Balances Industry in 1967 totaled $141 million. This included shipments of scales and balances (primary products), valued at $126 million, shipments of other products (secondary products) valued at $10 million, and miscellaneous receipts (mainly resales) of $5 million.

This industry's shipments of scales and balances (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 92 percent.

Industry 3576 shipments of scales and balances (primary products) in 1967 represented 96 percent (coverage ratio) of these products valued at $131 million shipped by all industries. In 1963, the coverage ratio was 97 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3576, these establishments accounted for approximately 1 percent of payroll and 1 percent of value added by manufacture.

3579--OFFICE MACHINES, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing office machines and devices, not elsewhere classified. Establishments primarily engaged in manufacturing computing machines are classified in industry 3573, cash registers in industry 3574, typewriters in industry 3572, and photocopy and microfilm equipment in industry 3861. For a detailed list of products of industry 3579, refer to table 6A product codes 3579111 to 3579243.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Office Machines, N.E.C., Industry in 1967 totaled $517 million. This included shipments of office machines, n.e.c. (primary products), valued at $322 million, shipments of other products (secondary products) valued at $41 million, and miscellaneous receipts (mainly resales) of $154 million.

This industry's shipments of office machines, n.e.c. (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 81 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 92 percent of the total industry shipments are represented by plants specializing in product class 35791, addressing, dictating, duplicating and other office and store machines, n.e.c., except parts and attachments.

Industry 3579 shipments of office machines, n.e.c. (primary products) in 1967 represented 77 percent (coverage ratio) of these products valued at $418 million shipped by all industries. In 1963, the coverage ratio was 81 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3579, these establishments accounted for approximately 1 percent of payroll and 1 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio
	Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(percent)	(percent)

Note: In 1967, 1963, and 1958, the number of companies in industry 3572 was 20, 17, and 16, respectively; in industry 3573: 134,(NA), and (NA); industry 3574: 132, 213, and 119; industry 3576: 69, 81, and 71; industry 3579: 170, 158, and 119. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors of the 1966/1965 relatives for employment and value added were as follows: industry 3572, 1 and 1, respectively; industries 3573 and 3574 (previously industry 3571), 1 and 1, respectively; industry 3576, 5 and 6, respectively; and industry 3579, 2 and 4, respectively.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[3]The value of shipments and cost of materials for this industry includes extensive duplication arising from shipments between establishments in the same industry classification. Accordingly, the specialization ratios and coverage ratios are not shown. For further explanation see introductory text.

[4]Comparable data for value added by manufacture, cost of materials, and value of shipments are not available for years prior to 1963. For other items, comparable data prior to 1963 appear in Volume II, 1963 Census of Manufactures in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[3]Geographic data for 1963 for industries 3573, "Electronic Computing Equipment" and 3574 "Calculating and Accounting Machines" are not available.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under 50 thousand (or under 50 employees).

[1]The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

[2]The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

[3]The specialization and coverage ratios are not shown for industry 3573 as the data from which these ratios are obtained include extensive duplication because the products of some establishments in the industry are consumed as materials by other establishments in the same industry.

TABLE 4. General Statistics, by Employment Size of Establishment: 1967

(See Appendix, Explanation of Terms)

Item	Establishments (number)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Man-hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)	End-of-year inventories (million dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2]Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. rRevised.

[1]The total value of shipments of electronic computing equipment includes extensive duplication resulting from the use of products of certain establishments as materials by other establishments within the same industry. Accordingly, the specialization and coverage ratios have not been calculated.

[2]Data for 1963 for industry 3573, Electronic Computing Equipment, are combined with industry 3574, Calculating and Accounting Machines.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

3574	2542 Metal partitions and fixtures	(over 2)
3574	2599 Furniture and fixtures, n.e.c	(over 2)
3574	2782 Blankbooks and looseleaf binders	(over 2)

Product code	Class of products, industry, and miscellaneous receipts	Other industries
	Listing of other industries with over $2 million shipments of the primary products--Continued	
3574	3611 Electric measuring instruments	(2-5)
3574	3662 Radio and TV communication equipment	5.6
3574	3821 Mechanical measuring devices	(2-5)
3579	2522 Metal office furniture	(over 2)
3579	2641 Coated and glazed paper	(5-10)
3579	2761 Manifold business forms	(over 2)
3579	3315 Steel wire and related products	(10-20)
3579	3552 Textile machinery	(over 2)
3579	3661 Telephone and telegraph apparatus	(over 2)
3579	3662 Radio and TV communication equipment	(over 2)
3579	3871 Watches and clocks	(over 2)

Note: Data shown parenthetically are ranges expressed in millions of dollars. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under 50 thousand (or under 50 employees).

[1]The total value of shipments for the Electronic Computing Equipment Industry includes extensive duplication resulting from the use of products of some establishments in the industry as materials by others within the same industry.

[2]Includes, where appropriate, values for those 4-digit product groups for which either the symbol "D" or a value range, e.g. (2-5), (under 2), etc. appear above.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

	As reported on Census Annual Form MA-35R	(X)	[14]394.8	(X)	[10]314.2
35743 31	Produced by other than complete machine manufacturers	(X)	8.9	(X)	[11]120.2
35740 00	Calculating and accounting machines, n.s.k. (For companies with 10 or more employees. See Note.)	(X)	29.2		
35740 02	Calculating and accounting machines, n.s.k. (For companies with less than 10 employees. See Note.)	(X)	5.6	(X)	[12]9.8
3576- --	SCALES AND BALANCES, TOTAL	(X)	131.4	(X)	90.0
	Scales and balances, except laboratory:				
35760 13	Motor truck scales	4.9	18.8	3.0	12.1
35760 15	Railroad track scales				
	Industrial scales:				
35760 21	Bench and portable	(X)	8.9	(X)	6.3
35760 23	Floor scales, including built-in and dormant	(X)	6.9	(X)	3.8
35760 25	Predetermined weighing and checkweighing scales all types except automatic bulk material weighers, fillers, and batching proportioners	(X)	9.9	(X)	8.7
35760 27	Automatic bulk material weighers, predetermined weight type, for weighing, filling, batching and proportioning	(X)	10.6	(X)	6.0
35760 29	Miscellaneous industrial scales, including special purpose, crane, suspension, tank, hopper, force measuring devices, and conveyor scales (weigh and feed) for bulk materials	(X)	18.7	(X)	10.2
	Retail and commercial scales:				
35760 31	Computing			(NA)	12.1
35760 35	Miscellaneous, including noncomputing counter, cotton beams and steel yards, egg-grading scales, and hanging scales for retail use	(NA)	19.6	(X)	2.5
	Household and person weighing scales:				
35760 41	Bathroom	3,719.7	13.8	3,470.0	11.0
35760 45	Person-weighing scales, (coin operated and free weighing) and miscellaneous household scales, including kitchen, baby scales, etc.	(X)	1.8	(X)	2.3
35760 51	Mailing and parcel post scales	(NA)	3.2	326.0	2.9
35760 82	Accessories and attachments (sold separately)	(X)	2.3	(X)	2.6
35760 84	Parts for scales and balances (sold for assembly elsewhere, repair, service, etc.)	(X)	8.6	(X)	5.9
35760 00	Scales and balances, n.s.k. (For establishments with 10 or more employees. See Note.)	(X)	6.9	(X)	3.4
35760 02	Scales and balances, n.s.k. (For establishments with less than 10 employees. See Note.)	(X)	1.4		

See foonotes at end of table.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

Product code	Product	Total shipments including interplant transfers			
		1967		1963	
		Quantity (number of units)	Value (million dollars)	Quantity (number of units)	Value (million dollars)
3579- --	OFFICE MACHINES, N.E.C., TOTAL	(X)	417.7	(X)	275.8
35791 --	Addressing, dictating, duplicating, and other office and store machines, n.e.c. except parts and attachments:				
	As reported in the census of manufactures[1]	(X)	333.1	(X)	[16]246.9
	As reported on Census annual Form MA-35R, total[1]	(X)	298.4	(X)	206.6
	Duplicating machines:				
	Spirit:				
35791 11	Hand	20.6	2.5	21.8	2.7
35791 12	Electric	38.7	37.1	14.1	4.0
35791 16	Offset			11.8	23.4
	Stencil:				
35791 13	Hand	31.2	6.7	36.8	5.6
35791 14	Electric				
35791 18	Other, including gelatin and ribbon and ink	(X)	([17])		
	Office machines, n.e.c.:				
35791 27	Autographic registers	114.7	1.7	103.9	1.8
35791 29	Dictating, transcribing, and recording machines (all media) designed as office machines, including conference recording combination dictating and telephone recording, etc.) but excluding home-type wire and tape recorders	193.2	52.7	130.1	31.1
35791 31	Check handling machines	155.3	25.0	132.1	24.5
35791 33	Time recording and time stamp machines	102.3	13.4	81.0	9.1
35791 36	Mail handling machines	570.5	72.1	(X)	104.4
35791 26	All other office machines, n.e.c.	(X)	87.1		
35792 --	Parts and attachments for addressing, dictating, duplicating, and other office and store machines n.e.c., total	(X)	65.8	(X)	[16]19.8
	Produced by complete machine manufacturers:				
	As reported in the census of manufactures[1]	(X)	59.2	(X)	([16])
	As reported on Census Annual Form MA-35R, total[1]	(X)	56.7	(X)	43.8
35792 19	Parts and attachments for duplicating machines	(X)	15.9	(X)	11.0
35792 43	Parts and attachments for office machines, n.e.c.	(X)	40.3	(X)	32.8
35792 41	Produced by other than complete machine manufacturers	(X)	6.6	(X)	19.8
35790 00	Office machines n.e.c., n.s.k. (For establishments with 10 or more employees. See Note.)	(X)	15.7	(X)	9.1
35790 02	Office machines n.e.c., n.s.k. (For establishments with less than 10 employees. See Note.)	(X)	3.1		

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated.

See footnotes on next page.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

FOOTNOTES FOR TABLE 6A-35F

[1]For these products, data were also collected on Annual Form MA-35R, "Office, Computing, and Accounting Machines." In lieu of asking for detailed statistics on these products in the census of manufactures, respondents were asked to report only value of shipments for specified classes of products for which separate figures had previously been collected on the annual form. In most cases, the value figures reported in the census of manufactures for each class of products agreed closely with the corresponding figures reported in the annual survey. However, there were some differences between the census figures and the annual survey figures. These variations were due primarily to the following reasons:

a. Use of different reporting periods (calendar year vs. fiscal year.)
b. Use of different bases for reporting value (company sales vs. factory production.)
c. Use of estimates in reporting data on the annual survey, whereas census of manufactures figures generally represent more exact shipments figures.

[2]Data on typewriters are also published monthly in Current Industrial Reports Series M35C, Typewriters.

[3]Includes standard portable typewriters and specialized typewriters such as specialized composing typewriters, coded media typewriters, and input/output typewriters.

[4]The total value of shipments of electronic computing equipment includes extensive duplication resulting from the use of products of some establishments in the industry as materials by others within the same industry.

[5]The 1963 data for code 3573---, Electronic Computing Equipment, Total, includes data for code 3574---, Calculating and Accounting Machines, Total. Also, 1963 data shown for code 3573100 includes data for codes 3573310, 3574100, and 3574310.

[6]Figures include in some cases the value of leased machines as well as the value of machines sold outright.

[7]The 1963 data for product code 3573141, Punched card system machines, are included with product code 3574111, Accounting and bookkeeping machines, including billing machines with accounting registers, and product code 3574151, Cash registers.

[8]The 1963 data for product code 3573198, Other electronic computing equipment, n.e.c., including rebuilt machines, are included with product code 3574198. Other calculating and accounting machines, n.e.c., including rebuilt machines.

[9]Included with product code 3573100.

[10]The 1963 data for product code 3573310, Parts and attachments for electronic computing equipment produced by complete machine manufacturers as reported on Census annual Form MA-35R, are included with product code 3574310, Parts and attachments for calculating and accounting machines produced by complete machine manufacturers as reported on Census annual Form MA-35R. Such 1963 data are also included with data shown for product code 3573100.

[11]The 1963 data for product code 3573331, Parts and attachments for electronic computing equipment produced by other than complete machine manufacturers, are included with product code 3574331, Parts and attachments for calculating and accounting machines produced by other than complete machine manufacturers.

[12]The 1963 data for electronic computing equipment, not specified by kind, are included with calculating and accounting machines, not specified by kind.

[13]Included with product code 3573---.

[14]The 1967 data for product code 3574111, Accounting and bookkeeping machines, including billing machines with accounting registers, and product code 3574151. Cash registers, are included with product code 3574310, Parts and attachments for calculating and accounting machines produced by complete machine manufacturers as reported on Census annual Form MA-35R.

[15]The number of cash registers shipped during 1967 and 1963 were 117,495 and 87,606, respectively.

[16]The 1963 data for parts and attachments produced by complete machine manufacturers were included with complete machines.

[17]Data are included with product code 35791 26 "All other office machines, n.e.c.".

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	1967 value of shipments[2]

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions in thousands (rather than rounding) in computer operations. See Appendix, Explanation of terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

[2]Comparable 1963 data are not available.

TABLE 6C. Product Classes–Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

(In millions of dollars)

Code	Product class	1967	1966[1]	1965[1]	1964[1]	1963	1958	1954	1947

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2]Includes products coded in industry 3574, Calculating and Accounting Machines.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

(See Appendix, Explanation of Terms)

Code	Material	Unit of measure	1967 Quantity	1967 Delivered cost (million dollars)	1963 Quantity	1963 Delivered cost (million dollars)

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963—Continued

(See Appendix, Explanation of Terms)

Code	Material	Unit of measure	1967		1963	
			Quantity	Delivered cost (million dollars)	Quantity	Delivered cost (million dollars)
	INDUSTRY 3579.--OFFICE MACHINES, N.E.C.--Continued					
367010	Electron tubes except X-ray[2]	Million lbs	0.1	(Z)	0.1	0.1
367408	Solid state semiconductors[2]	...do	1.4	0.3	1.1	0.2
970099	All other materials and components, parts, containers, and supplies consumed		(X)	65.1	(X)	43.3
976000	Materials and components, n.s.k.[3]		(X)	20.9	(X)	16.6

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]Included with material code 970099, "All other materials, etc." to avoid disclosing figures of individual companies.

[2]No data are available for the quantities of castings, electric motors and generators, electron tubes or solid state semiconductors produced and consumed in the same establishment.

[3]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967 this includes estimates for companies that were not mailed report forms.

[4]Includes extensive duplication because the products of some establishments are consumed as materials by other establishments in the same industry.

[5]Data for material code 331011, carbon steel bars and bar shapes, have been included with material codes 331015 through 331031 for industry 3574, calculating and accounting machines.

[6]Data for material code 331015, carbon steel structural shapes, have been included with material code 331019, all other carbon steel mill shapes and forms, for industry 3573, Electronic Computing Equipment.

[7]Aluminum sheet, plate, and foil, code 335202, is included with code 335209 "All other aluminum mill shapes and forms."

TABLE 7B. Fuels and Electric Energy Consumed: 1967

(See Appendix, Explanation of Terms)

Item	Unit of measure	Electronic computing equipment (SIC 3573)
Cost of purchased fuels and electric energy, total	Million dollars.	11.8
Cost of purchased fuels, total	...do	2.2
Purchased electric energy:		
Quantity	Million kw.-hrs.	898.3
Cost	Million dollars.	9.6
Quantity of electric energy generated less quantity sold	Million kw.-hrs.	-
Total energy used for heat and power[1]	Million kw.-hrs. equivalent	2,065.5

Note: Detailed figurs may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments	All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new
			Number	Payroll	Number	Man-hours	Wages				
		(number)	(1,000)	(million dollars)	(1,000)	(millions)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 9. Establishments and Production Workers for Selected Metalworking Operations: 1967

(To be published in a separate subject chapter titled "Selected Metalworking Operations.")

SERVICE INDUSTRY MACHINES AND MACHINE SHOPS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3581--Automatic Merchandising Machines
3582--Commercial Laundry, Drycleaning, and Pressing Machines
3585--Air Conditioning Equipment and Commercial and Industrial Refrigeration Machinery and Equipment
3586--Measuring and Dispensing Pumps
3589--Service Industry Machines, Not Elsewhere Classified
3599--Miscellaneous Machinery, Except Electrical

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3581--AUTOMATIC MERCHANDISING MACHINES

This industry comprises establishments primarily engaged in manufacturing automatic merchandising units, also referred to as vending machines (excluding music, amusement, or gaming machines), and coin-operated mechanisms for such machines. For a detailed list of products of industry 3581, refer to table 6A, product codes 3581100 to 3581269.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Automatic Merchandising Machines Industry in 1967 totaled $248 million. This included shipments of automatic merchandising machines (primary products), valued at $230 million, shipments of other products (secondary products) valued at $7 million, and miscellaneous receipts (mainly resales) of $11 million.

This industry's shipments of automatic merchandising machines (primary products) in 1967 represented 97 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 81 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 80 percent of the total industry shipments are represented by plants specializing in product class 35811, automatic merchandising machines.

Industry 3581 shipments of automatic merchandising machines (primary products) in 1967 represented 88 percent (coverage ratio) of these products valued at $261 million shipped by all industries. In 1963, the coverage ratio was 90 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3581, these establishments accounted for 1 percent of payroll and 1 percent of value added by manufacture.

3582--COMMERCIAL LAUNDRY, DRYCLEANING, AND PRESSING MACHINES

This industry comprises establishments primarily engaged in manufacturing laundry and drycleaning equipment and pressing machines for commercial and industrial use. Establishments primarily engaged in manufacturing household laundry equipment are classified in industry 3633. For a detailed list of products of industry 3582, refer to table 6A, product codes 3582012 to 3582091.

The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been slightly changed from the classification system used in 1963. The change in composition of the industry as now constituted, compared with that under the classification system followed in the 1963 Census, is due principally to the inclusion of coin-operated household washing machines in industry 3582 for 1967. In 1963, such machines were included with industry 3633.

Value of shipments and other receipts of the Commercial Laundry Equipment Industry in 1967 totaled $183 million. This included shipments of commercial laundry equipment (primary products), valued at $158 million, shipments of other products (secondary products) valued at $15 million, and miscellaneous receipts (mainly resales) of $11 million.

This industry's shipments of commercial laundry equipment (primary products) in 1967 represented 92 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 91 percent.

Industry 3582 shipments of commercial laundry equipment (primary products) in 1967 represented 79 percent (coverage ratio) of these products valued at $200 million shipped by all industries. In 1963, the coverage ratio was 89 percent. Other industries shipping commercial laundry equipment (primary products) consisted mainly of industry 3633, Household Laundry Equipment, $29 million.

The (lower) coverage ratio in 1967 compared with the 1963 figure primarily results from changes in the Standard Industrial Classification system as described above.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3582, these establishments accounted for 1 percent of payroll and 1 percent of value added by manufacture.

3585--AIR CONDITIONING EQUIPMENT AND COMMERCIAL AND INDUSTRIAL REFRIGERATION MACHINERY AND EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing equipment and systems utilizing the basic refrigeration cycle, including mechanical and absorption refrigerators for commercial and industrial use; refrigeration machinery; and complete air-conditioning units for domestic, commercial, and industrial use. Establishments primarily engaged in manufacturing soda fountain and beer dispensing equipment are classified in this industry, and those primarily engaged in manufacturing household refrigerators and home and farm freezers in industry 3632. For a detailed list of products of industry 3585, refer to table 6A, product codes 3585100 to 3585798.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Refrigeration Machinery Industry in 1967 totaled $3,101 million. This included shipments of refrigeration machinery (primary products), valued at $2,580 million, shipments of other products (secondary products) valued at $315 million, and miscellaneous receipts (mainly resales) of $206 million.

The total cost of materials and total value of shipments of the Refrigeration Machinery Industry include extensive duplication resulting from the intra-industry shipments of certain products by some establishments for use as materials by others. For this reason, the "primary product specialization ratio," a measure of the extent to which plants classified in an industry "specialize" in making the products regarded as primary to the industry, has not been computed precisely. The ratio, however, is between 85 and 100. Since this duplication is also included in the value of shipments, the coverage ratio for this industry has not been computed.

Industry 3585 comprises two major establishment types. One group of establishments specializes primarily in the manufacture of compressors, condensers, and other components for air-conditioning and commercial refrigeration. Many of these establishments also produce complete air-conditioning equipment as well as subassemblies for air-conditioning and commercial refrigeration equipment. These establishments also rely on other establishments for their motors and other electrical equipment.

The other major segment of industry 3585 covers the production of commercial refrigeration equipment such as walk-in and reach-in refrigerators, display cases for meat, dairy, and other food products, low temperature freezing and dispensing equipment, florist cabinets, etc. Although significant amounts of metal are consumed in the manufacture of these products, many of these items contain substantial amounts of wood, glass, and other nonmetallic materials. Some types of commercial refrigeration equipment are shipped from the factory without compressors, condensing units or refrigeration equipment. These "remote type units" are then installed at the site with the suitable refrigeration components.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 32 percent of the total industry shipments are represented by plants specializing in product class 35852 air conditioners, room and unitary; and 28 percent in 35851, heat transfer equipment, except room and unitary air conditioning.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3585, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3586--MEASURING AND DISPENSING PUMPS

This industry comprises establishments primarily engaged in manufacturing measuring and dispensing pumps commonly used in service and filling stations for dispensing gasoline, oil, and grease, including grease guns. Establishments primarily engaged in manufacturing pumps, compressors, and pumping equipment for general industrial use are classified in industry 3561. For a detailed list of products of industry 3586, refer to table 6A, product codes 3586011 to 3586098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Measuring And Dispensing Pumps Industry in 1967 totaled $175 million. This included shipments of measuring and dispensing pumps (primary products), valued at $111 million, shipments of other products (secondary products) valued at $45 million, and miscellaneous receipts (mainly resales) of $19 million.

This industry's shipments of measuring and dispensing pumps (primary products) in 1967 represented 71 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 73 percent. Secondary products shipped by this industry in 1967 consisted mainly of pumps and compressors ($16 million), valves and pipe fittings ($8 million).

Industry 3586 shipments of measuring and dispensing pumps (primary products) in 1967 represented 80 percent (coverage ratio) of these products valued at $139 million shipped by all industries. In 1963, the coverage ratio was 85 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3586, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

3589--SERVICE INDUSTRY MACHINES, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing machines and equipment, not elsewhere classified, for use in service industries, such as floor sanding machines, industrial vacuum cleaners, scrubbing machines, commercial cooking and food warming equipment, and commercial dishwashing machines. Establishments primarily engaged in manufacturing household electrical appliances are classified in Group 363. For a detailed list of products of industry 3589, refer to table 6A, product codes 3589111 to 3589398.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Service Industry Machines, N.E.C., Industry in 1967 totaled $598 million. This included shipments of service industry machines, n.e.c. (primary products), valued at $476 million, shipments of other products (secondary products) valued at $59 million, and miscellaneous receipts (mainly resales) of $64 million.

This industry's shipments of service industry machines, n.e.c. (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments(primary and secondary). The industry specialization ratio in 1963 was 86 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 53 percent of the total industry shipments are represented by plants specializing in product class 35892, service industry machines and parts; and 33 percent in 35891, commercial cooking and food warming equipment.

Industry 3589 shipments of service industry machines, n.e.c. (primary products) in 1967 represented 88 percent (coverage ratio) of these products valued at $540 million shipped by all industries. In 1963, the coverage ratio was 84 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3589, these establishments accounted for 2 percent of payroll and 2 percent of value added by manufacture.

3599--MISCELLANEOUS MACHINERY, EXCEPT ELECTRICAL

This industry comprises establishments primarily engaged in manufacturing machinery and parts except electrical, not elsewhere classified, such as pistons and piston rings, carburetors, metallic packing, and amusement park equipment. This industry also includes establishments primarily engaged in producing or repairing machine and equipment parts, not elsewhere classified, on a job or order basis for others. For a detailed list of products of industry 3599, refer to table 6A, product codes 3599111 to 3599311.

The code number as well as the definition of this industry was unchanged between 1967 and 1963. However, in 1967 a number of establishments performing "machine shop jobwork" have been classified in this industry, which had previously been classified in other industries. This change in classification results mainly from the fact that a separate product code for such work (35993 11) was introduced in the 1967 Census of Manufactures. It appears that between $400 million and $600 million in value of shipments is accounted for by establishments which have been classified in other industries in prior years.

Value of shipments and other receipts of the Miscellaneous Machinery, Except Electrical, Industry in 1967 totaled $3,712 million. This included shipments of miscellaneous machinery, except electrical (primary products), valued at $3,103 million, shipments of other products (secondary products) valued at $217 million, and miscellaneous receipts (mainly contract work on materials owned by others) of $392 million.

This industry's shipments of miscellaneous machinery, except electrical (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). Secondary products shipped by this industry in 1967 included motor vehicle parts and accessories ($51 million), and special dies, tools, jigs, and fixtures ($21 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 32 percent of the total industry shipments are represented by plants specializing in product class 35993, receipts for machine shop job work.

Industry 3599 shipments of miscellaneous machinery, except electrical (primary products) in 1967 represented 94 percent (coverage ratio) of these products valued at $3,286 million shipped by all industries.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 3599, these establishments accounted for 6 percent of payroll and 8 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio
	Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(percent)	(percent)

TABLE 1A. General Statistics: 1958 to 1967–Continued

Footnotes for Table 1A--35G

Note: In 1967, 1963, and 1958, the number of companies in industry 3581 was 143, 148, and 119, respectively; in industry 3582: 109, 107, and 113; industry 3585: 624, 655, and 600; industry 3586: 46, 42, and 31; industry 3589: 554, 496, and (NA); industry 3599: 15055, 12,032, and 10,098. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. * These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors of the 1966/1965 relatives for employment and value added were as follows: industry 3581, 1 and 1, respectively; industry 3582, 1 and 2, respectively; industry 3585, 1 and 1, respectively; industry 3586, 1 and 1, respectively; industry 3589, 2 and 1, respectively; and industry 3599, 2 and 1, respectively.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to these industries.

[3]The change in coverage ratio for this industry between 1963 and 1967 results largely from separately identifying coin operated washer extractor and drying tumblers for commercial laundry equipment. Most of these products are produced by establishments classified in other industries.

[4]The value of shipments and cost of materials for this industry includes extensive duplication arising from shipments between establishments in the same industry classification. Accordingly, the specialization ratios and coverage ratios are not shown. For further explanation see introductory text.

[5]In 1967 a number of establishments performing "machine shop jobwork" have been classified in this industry, which had previously been classified in other industries. This change in classification results mainly from the fact that a separate product code for such work (35993 11) was introduced in the 1967 Census of Manufactures. It appears that between $400 million and $600 million in value of shipments is accounted for by establishments which have been classified in other industries in prior years.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated.

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250 to 499 employees
CC - 500 to 999 employees
EE - 1,000 to 2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

[2]The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

[3]The specialization and coverage ratios are not shown for industry 3585 as the data from which these ratios are obtained include extensive duplication because the products of some establishments in the industry are consumed as materials by other establishments in the industry.

TABLE 4. General Statistics, by Employment Size of Establishment: 1967

ESTABS. COVERED BY ADMIN. RECORDS[1 e]	7 568	15.1	80.7	15.1	25.5	67.8	192.7	90.3	283.1	8.9	22.8

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments: Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Value of primary product shipments: Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]See table 1A, footnote [3].

[2]The total value of shipments of refrigeration machinery includes extensive duplication resulting from the use of products of certain establishments as materials by others within the same industry. Accordingly, the specialization and coverage ratios have not been calculated.

[3]Not comparable with 1967 data due to differences in the manner in which the data were collected. In 1963, product code 3599311, machine shop jobwork, was not separately listed. This type of work was included as "All other machine shop products" by some establishments, and as contract and commission work by many establishments including a large number classified in other industries. (See also table 1A, footnote 5)

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Product code	Class of products, industry, and miscellaneous receipts	All industries	Automatic merchandising machines (SIC 3581)	Commercial laundry equipment (SIC 3582)	Refrigeration machinery (SIC 3585)	Measuring and dispensing pumps (SIC 3586)	Service industry machines, n.e.c. 35992 98	Other machine shop products	[16]1.9	[16]12.8	(X)	(X)	(X)	(X)	(X)	691.9
35992 71	Carburetors, rebuilt, all types								
35992 00	All other machine job products, n.s.k.	(X)	54.0	(X)	(X)	(X)	(X)	(X)	([15])
35993 11	Machine shop jobwork	(X)	[17]1,080.0	(X)	(X)	(X)	(X)	(X)	([14])
35990 00	Miscellaneous machinery, except electrical, n.s.k. (For establishments with 10 or more employees.)	(X)	561.9	(X)	(X)	(X)	(X)	(X)	[15]414.0
35990 02	Miscellaneous machinery, except electrical, n.s.k. (For establishments with less than 10 employees.)	(X)	281.3	(X)	(X)	(X)	(X)		

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Footnotes continued on next page.

TABLE 6A-1. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1967 and 1963—Continued

Footnotes for Table 6A-1--35G--Continued

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. In some cases, figures which are otherwise publishable are withheld to avoid indirect disclosure by subtraction from higher-level totals or related figures.

[1]For these products, data were also collected on the Census Annual Commodity Survey program. In lieu of asking for detailed statistics on these products in the census of manufactures, respondents were asked to report only value of shipments for specified classes of products for which separate figures had previously been collected on the annual form. In most cases, the value figures reported in the census of manufactures for each class of products agreed closely with the corresponding figures reported in the annual survey. However, there were some differences between the census figures and the annual survey figures. These variations were due primarily to the following reasons:

a. Use of different reporting periods (calendar year vs. fiscal year).
b. Use of different bases for reporting value (company sales vs. factory production).
c. Uses of estimates in reporting data on the annual survey, whereas census of manufactures figures generally represent more exact shipments figures.

See tables 6A-2 through 6A-8 for more detailed product data.

[2]This product class total (35820) is not completely comparable with data for prior years because of the inclusion in 1967 of coin-operated washer-extractors and drying tumblers, product codes 35820 12 and 35820 16. An indeterminate portion of these products have previously been included in product class 36331: Mechanical household washing machines, dryers, and washer-dryer combinations.

[3]1963 data for these machines are primarily included in industry 3633 (Household Laundry Equipment), although an indeterminate amount were reported in Industry 3582 and are included in product code 35820 14.

[4]For 1963, an indeterminate amount of coin-operated drying tumblers were included with household dryers, Industry 3633.

[5]Excludes coin-operated mechanisms.

[6]For 1963, product codes 35820 41 (Presses, drycleaning) and 35820 43 (Garment-manufacturer's (needle trade) presses) were included with product code 35820 81 (Other drycleaning equipment, including washers, extractors and reclaiming units).

[7]The total value of shipments of refrigeration machinery includes extensive duplication resulting from the use of products of some establishments in the industry as materials by others within the same industry.

[8]1963 data for product class 35852 are included with product class 35851.

[9]Includes compressors and motor compressors for household refrigerators valued at $20.0 million.

[10]Includes condensing units for household refrigerators valued at $5.6 million.

[11]Twin pumps are counted as one unit.

[12]1967 data for product code 3589261 "Carpet Sweepers, commercial type" are included with product code 3589291 "Other Industrial and Commercial Service Machines" to avoid disclosing figures for individual companies.

[13]Motor vehicle parts data were published in the 1963 Census of Manufactures in table 6E, "Production and Use of Selected Parts of the Type Used for Passenger Cars, Trucks, and Busses," of report MC63(2)-37A, Motor Vehicles and Equipment. There are significant differences in the manner in which the data were developed in the two Censuses including the following:

(a) In 1963 a total production figure was typically collected including, where appropriate, the quantities produced and consumed in the same establishment in producing a more finished product. In 1967 no production figures were collected.

(b) In 1963 separate quantity data were reported for the quantities of equipment "used in the assembly of new vehicles." These data were collected from automobile assembly plants and included the quantities of parts produced and consumed in the assembly of new vehicles. For 1967 a value rather than a quantity figure was collected and the data were reported by the plants producing the parts rather than by the assembly plants. No values are included for the quantities of parts produced and consumed in the same plant. The value of such parts shipped as interplant transfers from parts plants to assembly plants owned by the same company are included in both 1963 and 1967.

(c) In 1963 the quantity of parts "for replacement, export, and other purposes" was derived by subtracting from the total number of units produced the quantities used in the assembly of new vehicles as reported by motor vehicle assembly plants. In 1967 the quantity and value of export shipments was reported by parts producing plants.

(d) In 1963 it was not considered feasible for selected products to separately identify automotive type parts from similar parts used for tractors, construction machinery, boats, etc. In 1967 this separation was provided for.

[14]In 1963, product code 3599311, Machine shop jobwork, was not separately listed. This type of work was included as "All other machine shop products" by some establishments, and as contract and commission work by many establishments including a large number classified in other industries. (See also table 1A, footnote 5).

[15]For 1963 data for product codes 3599100 and 3599200 are included in product code 3599000.

[16]Data are limited to rebuilding on a factory basis. Rebuilding operations performed in service stations, garages, etc., are excluded from the Census of Manufactures. Also, these figures may be somewhat understated because of the exclusion of data for establishments with fewer than 10 employees. Such establishments were typically not included in the mail portion of the 1967 Census of Manufactures, but were included in the published data by the use of estimates from administrative records. These estimates are included in the value shown for product code 3599002. Although the use of such administrative records tends to create a small understatement for most specific products, the effect is more significant for those products typically produced in small establishments, such as rebuilding facilities.

[17]Value consists principally of receipts for work done on materials owned by others. The value includes approximately $40 million of such receipts reported by establishments classified in industries other than industry 3599. There may be additional values of such work done by other industries reported as miscellaneous receipts rather than as "machine shop jobwork".

TABLE 6A-2. Quantity and Value of Shipments of Coin-Operated Vending Machines: 1967 and 1963

1967 census product code	Item	1967		1963	
		Number of machines	Value ($1,000)	Number of machines	Value ($1,000)
35811--	COIN-OPERATED VENDING MACHINES, TOTAL	540,698	188,746	606,665	163,521
	Vending machines for beverages, total	190,392	123,500	200,890	106,060
	Coffee:[1]				
3581102	Instand or liquid concentrates	7,472	4,348	6,954	2,783
3581103	Fresh-brew (batch)			4,133	4,991
3581104	Fresh-brew (single cup)	21,051	23,129	16,226	15,887
3581105	Canned beverages (refrigerated)[2]	51,906	26,809	4,103	2,575
	Soft drink:				
3581107	Bottle[2]	87,600	40,024	145,433	52,722
3581108	Cup (postmix)	12,766	19,820	13,055	18,237
3581111	Cup (premix)	3,414	3,376	5,088	4,467
3581101 06, 19	Other vending machines for beverages[3]	6,183	5,994	5,898	4,398
	Vending machines for confections and foods, total	193,893	40,131	179,703	29,751
3581121	Bulk	112,696	1,900	113,295	1,812
3581122	Candy bar	56,858	19,751	41,765	13,768
3581123	Hot canned foods and soups	4,366	2,494	2,573	1,322
3581125, 26	Multipurpose (refrigerated and nonrefrigerated)	19,973	15,986	4,982	6,659
3581124, 27, 29	Other vending machines for confections and foods[4]			17,088	6,190
	All other vending machines, total	156,413	25,115	226,072	27,710
3581131	Cigarette	57,603	21,427	62,793	21,311
3581135	Postage stamp	5,701	285	13,382	706
3581133	Ice	93,109	3,403	854	2,793
3581139	All other vending machines except for beverages, confections and foods[5]			149,043	2,900

[1] These are primarily coffee vending machines though they may also vend hot chocolate and/or hot soup from the same cabinet.
[2] Some vending machines designed and sold to handle bottled soft drinks are also adaptable to canned beverages through the use of a conversion kit. For this reason the number of factory shipped dispensers for canned beverages may be somewhat less than the number of vending machines put into service.
[3] Includes packaged milk (indoor and outdoor); milk (bulk or cup); beverage combination (hot and cold); hot beverages such as hot chocolate and/or hot soup (except canned soup) not sold in a combination machine with coffee; and packaged dry ingredients for mixing into beverages.
[4] Includes vending machines for such commodities as apples, cookies, crackers, and biscuits, popcorn, pastry, ice cream, and packaged chewing gum.
[5] Includes vending machines for such products as cosmetics and toiletries, novelties, detergents, newspapers, and stationery supplies.

TABLE 6A-3. Condensing Units: Quantity and Value of Shipments, 1967 and 1963

1967 Census product code	Product	1967		1963	
		Quantity (number of units)	Value ($1,000)	Quantity (number units)	Value ($1,000)
	CONDENSING UNITS,[1] TOTAL	478,448	66,108	786,710	66,305
	Air-cooled, total	453,817	51,230	754,894	53,704
	Open-type, total	7,731	1,626	11,873	1,778
3585521	3/4 hp. and under	3,948	358	7,144	618
3585522	1 hp.	945	160	1,430	222
3585523	1.5 hp.	580	142	870	208
3585524	2 hp.	876	248	1,080	255

	Air-conditioning coils, total	716,887	65,173	316,748	33,543
3585285	With blower	160,859	27,708	66,723	15,256
3585286	Without blower	556,028	37,465	250,025	18,287
3585287	Number of air or evaporative cooled units	556,028	(X)	250,025	(X)
3585288	Number of water cooled units				

(NA) Not available. (X) Not applicable.

[1]Excludes quantity of air-conditioning coils.

[2]For 1963, a total of 68,631 units valued at $33,935 thousand in the under 97,000 B.t.u./hr. category were shipped. A breakdown between "Horizontal" types and "Other than Horizontal" types was also obtained for units in this category. Of this total, 55,087 units valued at $24,221 thousand represented "Horizontal" types.

[3]For 1963, data for "Other than horizontal" types are included with "Horizontal" types.

TABLE 6A-8. Other Air Conditioning and Refrigeration Equipment: Quantity and Value of Shipments, 1967 and 1963

1967 Census product code	Product	1967		1963

3585195	20.1 tons and over	[4]10,937	[4]25,365	[4]9,237	[4]17,710
3585196	Natural-draft type, all sizes	(D)	(D)	1,568	195

(D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.

[1]Both quantity and value figures exclude systems assembled from purchased components and installed at passenger automobile assembly lines. In addition, for the systems shown, the values are understated because of the exclusion of compressors for some systems. The value understatement, for this reason, is between 25 and 50 percent for 1967.

[2]Towers which are prefabricated and shipped either as a factory-assembled section or as major components for assembly at the site of the installation.

[3]1963 data for product code 3585192 "Field assembled, mechanical-draft type, factory-fabricated water-cooling towers (20 tons and under)" are included with product code 3585194 "Factory assembled, mechanical-draft type, factory-fabricated water-cooling towers (20 tons and under)."

[4]Data for product code 3585193 "Field assembled, mechanical-draft type, factory-fabricated water-cooling towers (20.1 tons and over)" are included with product code 3585195 "Factory assembled, mechanical-draft type, factory-fabricated water-cooling towers (20.1 tons and over)."

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line to table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States was $1 million or more reported shipments.

35990	Miscellaneous machinery, except electrical, n.s.k.	843.2							

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes.

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses in the value of shipments columns either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data.

[2]Parts and accessories for commercial cooking and food warming equipment are included in product class 35892 for 1954.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

(See Appendix, Explanation of Terms)

976000	Materials, containers, supplies, n.s.k.[3]	.....	(X)	336.1	(X)	190.6

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under $50 thousand.

[1] Included with material code 970099, "All other materials and components..." to avoid disclosing figures for individual companies.

[2] Excludes materials produced and consumed into products at the same establishment.

[3] This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

[4] Includes extensive duplication because the products of some establishments are consumed as materials by other establishments in the same industry.

[5] No data are available for 1967 on the quantities of castings and electric motors and generators produced and consumed in the same establishment. For 1963, the following data are available: industry 3589--iron castings (code 332011), 1.0 thousand short tons; and other fractional horsepower electric motors (code 362115), 8.7 thousand units; industry 3599--iron castings (code 332011), 7.7 thousand short tons; steel casting (code 332200), 0.9 thousand short tons; aluminum castings (code 336100) 2.9 million pounds; and copper castings (code 336200), 3.2 million pounds.

[6] These figures are understated by $10 million or less because of apparent undercoverage of carbon steel pipe and tube.

[7] Included with material code 970099, "All other materials and components, etc."

TABLE 7B. Fuels and Electric Energy Consumed: 1967

(See Appendix, Explanation of Terms)

Code	Item	Unit of measure	Refrigeration machinery (SIC 3585)	Miscellaneous machinery, except electrical (SIC 3599)
	Cost of purchased fuels and electric energy, total....	Million dollars..	17.9	42.5

	Cost.....	Million dollars..	11.1	28.9
	Quantity of electric energy generated less quantity sold.....	Million kw.-hrs..	-	-
	Total energy used for heat and power[1].....	Million kw.-hrs. equivalent.....	4,765.7	8,620.5

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Represents the quantity of purchased electric energy and the kilowatt-hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments	All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new
			Number	Payroll	Number	Man-hours	Wages				
		(number)	(1,000)	(million dollars)	(1,000)	(millions)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) - Under 50 thousand (or under 50 employees).

TABLE 9. Establishments and Production Workers for Selected Metalworking Operations : 1967

To be published in a separate subject chapter titled "Selected Metalworking Operations."

Electrical Equipment and Supplies

36A Electrical measurement and distribution equipment

36B Household appliances

36C Electric lighting and wiring equipment

36D Communication equipment, including radio and TV, and electronic components and accessories

36E Miscellaneous electrical equipment and supplies

This major group covers establishments primarily engaged in manufacturing machinery, apparatus and supplies for the generation, storage, transmission, transformation, and utilization of electrical energy.

A number of products which are sometimes considered "as belonging" in electrical equipment are classified in other major groups in the 1957 edition of the Standard Industrial Classification Manual in use for 1963. For example, machinery or equipment powered by built-in or detachable electric motors, such as machine tools and other metalworking equipment, commercial laundry and dry cleaning equipment, industrial vacuum cleaners, and office and store machines are classified in Major Group 35, Machinery, Except Electrical. Establishments primarily engaged in producing glass insulators, glass blanks for bulbs, and porcelain electrical supplies are classified in Major Group 32; those producing electric furnaces and ovens, turbogenerators and gas welding apparatus in Major Group 35; and those making automatic temperature controls in Major Group 38.

Industries included in Major Group 36 are typically defined in terms of products and may include both electrical and electronic equipment. Industry groups 365, 366, and 367 include the bulk of electronic equipment in this major group, i.e., radios, television sets, electron tubes, etc., but they also encompass some communications equipment other than electronic. Both electrical and electronic testing equipment are included in industry 3611, Electric Measuring Instruments. Most of the other industries in Major Group 36 include products generally defined as electrical rather than electronic. Electronic components are frequently produced and consumed at the same location by establishments classified in this major group. Thus, there are (1) plants, solely engaged in producing electronic components, (2) plants producing electronic components and assembling them into finished products, and (3) plants which assemble components produced elsewhere either in other plants of the same company or by other companies. Other types of components and equipment in Major Group 36 such as motors, generators, and motor-generator sets are not uncommonly produced for incorporation into other products made in the same plant.

Products included in Major Group 36 consist of equipment and apparatus for industrial or commercial use as well as goods for household consumption. For example, group 364 includes such consumer durable goods as electric lamps, lighting fixtures, and wiring devices and supplies, as well as similar products for commercial or industrial use. Group 363 consists of household electric appliances such as ranges, ovens, water heaters, fans and small electric

appliances, household refrigerators and freezers, household laundry equipment, sewing machines, and vacuum cleaners.

Data on selected materials consumed (principally the metal items) by each of the 4-digit industries are shown in the respective table 7A's. The number of establishments engaged in some of the more important metalworking operations and the number of employees working in each operation are shown in table 9 for the 4-digit industries. The materials and metalworking operations shown in tables 7A and 9 do not represent, of course, a complete list or, for many industries in this group, even the most important ones. There are a number of significant activities such as assembly, subassembly, welding, etc., which are not covered in all instances. Although the production processes in this area adhere to a general pattern of metalworking and fabricating operations (e.g., machine shop, tool and die room, etc.), there are substantial variations in the numbers and types of processes performed by an individual establishment as well as from industry to industry. Within many of these industries establishments typically purchase mill shapes and castings and carry out the entire fabricating of the metal until it emerges as a finished product. In other industries, however, such as radio and television receiving sets, establishments may be primarily engaged in assembling component parts products by other companies or other plants of the same company. Also, not all industries consume significant amounts of metals or engage in metalworking operations, e.g., Carbon and Graphite Products (industry 3624), Electric Lamps (industry 364), Phonograph Records (industry 3652), and Batteries (industries 369 and 3692).

TABLE 1. General Statistics: 1967 and Earlier Years

(See Appendix, Explanation of Terms)

Year and item	Establishments		All employees [1]		Production workers			Value added by manufacture [2]	Cost of materials [3]	Value of shipments [3]	Capital expenditures, new [4]
	Total (number)	With 20 employees or more (number)	Total (1,000)	Payroll (million dollars)	Total (1,000)	Man-hours (millions)	Wages (million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.

[1]The figures for 1939 through 1967 include data for employees of manufacturing establishments who are engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

[2]For the period 1954 to 1967, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. See Introduction, "Value Added by Manufacture."

[3]The total value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry classification. For a more complete explanation, see Introduction.

[4]The figures for 1958 to 1967 include expenditures for plants under construction and not yet in operation.

[5]Data for 1947, 1954, and later years, exclude establishments primarily engaged in the manufacture of automatic temperature controls, whereas data for 1949 to 1953 include these establishments.

[6]In addition to data for operating establishments, figures for employment and payroll for manufacturing central administrative offices and auxiliary units are shown for the years 1949 to 1953 in the annual survey of manufactures volumes. Data for these units are not available for the years 1955 to 1957, 1959 to 1962, 1964 to 1966, and prior to 1949.

[7]Figures for 1958 to 1963, for operating manufacturing establishments are not strictly comparable with prior years due to revisions of the Standard Industrial Classification System.. Prior to 1958, data excludes establishments primarily engaged in the manufacture of household ranges and ovens; household refrigerators and home and farm freezers; household laundry equipment; household vacuum cleaners; sewing machines; water heaters, except electric; and other household appliances. Establishments primarily engaged in the manufacture of hearing aids; high frequency, induction, and dielectric heating apparatus; commercial food warming equipment; industrial electric heating units and devices; and insulated wire and cable made from purchased wire, are included in data prior to 1958.

[8]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

[9]Data for 1939 and earlier years exclude establishments primarily engaged in the manufacture of electric (dry) shavers.

[10]Figures for 1937 and earlier years include data for establisments primarily engaged in the manufacture of vacuum cleaners, turbo-generators and water-wheel generator sets, dictating machines and electric industrial furnaces and ovens. Value added for 1939 on a basis comparable with earlier years was $1,000 million.

[11]The figures for 1933 and earlier years include data for establishments primarily engaged in the manufacture of certain types of beauty and barber-shop equipment classified for later years in the "Miscellaneous manufactures" industries.

[12]The figures for 1925 and earlier years include data for establishments primarily engaged in the manufacture of certain types of mechanical refrigerators, classified for later years in the machinery (except electrical) industries.

[13]The figures for 1899 and 1904 include data for establishments primarily engaged in the manufacture of signs and advertising novelties, classified for later years in the "Miscellaneous manufactures" industries.

TABLE 2. General Statistics, by Geographic Areas: 1967 and 1963

(See Appendix, Explanation of Terms)

Code	Industry and geographic area[1]	1967											1963	
		Establishments		All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials[2] (million dollars)	Value of shipments[2] (million dollars)	Capital expenditures, new (million dollars)	All employees (1,000)	Value added by manufacture (million dollars)
		Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)
